HANDBOOK**

Pearson

At Pearson, we have a simple mission: to help people make more of their lives through learning.

We combine innovative learning technology with trusted content and educational expertise to provide engaging and effective learning experiences that serve people wherever and whenever they are learning.

From classroom to boardroom, our curriculum materials, digital learning tools and testing programmes help to educate millions of people worldwide – more than any other private enterprise.

Every day our work helps learning flourish, and wherever learning flourishes, so do people.

PART 1 UNDERSTANDING THE CHALLENGE

1 Orientation to postgraduate management learning and the role of the handbook	4
Learning outcomes	5
Introduction	6
Obvious and less obvious challenges of study at this level	6
Engaging with your learning	9
Why this handbook is not a textbook	14
Starting to plan	16
Potential benefits of P/G management study	18
Summary	19
Additional resources	20
Endnote	20
<i>HelpFile 1.1: Diagnosing your learning priorities</i>	21
2 Theory, practice and ethics in management learning	24
Learning outcomes	25
Introduction	26
Educating senior managers – a very short history	26
Challenges to the traditional business education model	28
Knowledge, knowing and learning	30
Managing in a complex, fast-changing world	33
Reflection and professional practice	36
Setting your own learning objectives	39
Revisiting your learning objectives	42
A hierarchy of objectives	44
Summary	45
Additional resources	46

PART 2 TRANSFERABLE PERSONAL SKILLS

3 Managing yourself and other stakeholders	50
Learning outcomes	51
Introduction	52
Systems and stakeholders	52
Assessing your personal management skills	54
Managing your emotions	56
Managing stress	58
Coping with unavoidable stress	61
Developing assertiveness skills	65
Managing organisational stakeholders	71
Managing your relationships with family and friends	74
Managing relationships with your university	76
Managing your emotions	78
Summary	78
Additional resources	78
Endnote	79
4 Managing your time	80
Learning outcomes	81
Introduction	82
Planning skills	83
Control	84
Making time for study	85
If the time simply is not there . . .	90
Basic time management principles	90
Putting principles into practice	101
Summary	103
Additional resources	104

PART 3 TRANSFERABLE LEARNING SKILLS

5 Managing your learning	108
Learning outcomes	109
Introduction	110
Creating an effective work space	110
Developing a study plan	112
If things go wrong	121
Summary	123
Additional resources	123
<i>HelpFile 5.1: Exercises that can be used during study breaks</i>	124

6 Professional development	126
Learning outcomes	127
Introduction	128
What is learning?	128
What is management theory and its uses?	131
Models and metaphors for learning	134
Learning styles	135
Single- and double-loop learning	140
Critical engagement	142
Reflection and professional learning	144
Self-authoring	147
Reflective writing	157
Organising your file	161
Summary	162
Additional resources	163
Endnotes	164
7 Critical use of ideas and information	166
Learning outcomes	167
Introduction	168
Efficient reading	168
Selecting reading material	171
Choosing your reading speed	174
Reading critically	177
Taking notes	184
Academic referencing	188
Summary	190
Additional resources	190
Answers to Exercise 7.1	192
8 Diagrams and infographics	194
Learning outcomes	195
Introduction	196
The importance of infographics	196
The magic management box	201
Brain patterns or mind maps	204
Relationship diagrams	207
Rich pictures	208
Systems maps	211
Multiple-cause (and other causal) diagrams	213
Other diagramming techniques	216
Diagramming hazards	216
Integrating images and words	217

Summary	220
Additional resources	221
Answers to Exercise 8.1	223
9 Teamwork, communication and leadership	224
Learning outcomes	225
Introduction	226
Key communication skills	226
Active listening	232
Talking	236
Dialogue	237
Effective teams	240
Task and process	241
Behaviours seen in groups and teams	242
Choosing team members	247
Team development	249
Practical aspects of team effectiveness	252
The dangers of group work	252
Developing team-working skills	253
Leadership and influencing skills	255
Negotiation skills	257
The role of informal groups	258
Action learning sets	260
Virtual teams	262
Summary	269
Additional resources	270
10 Case studies, complexity and consultancy	272
Learning outcomes	273
Introduction	274
The purpose of case studies	275
Coping with cases	281
A method for approaching cases	282
From cases to consultancy	293
Summary	293
Additional resources	294
11 Information from numbers	296
Learning outcomes	297
Introduction	298
Diagnosing your current skill level	299
Causes of difficulty	301
Descriptive equations	303

Modelling	303
Understanding probability and statistics	304
Making data more meaningful	306
Distributions and histograms	309
Bar and column charts	314
Pie charts	317
Graphs	318
Estimating	327
Rounding	327
Fractions, percentages and ratios	328
Using equations	335
Working with brackets	340
Differential calculus	340
Statistical software	342
Further skills development	343
Summary	343

Answers to exercises	351

PART 4 SKILLS FOR ASSESSMENT

12 Assessment methods, stakeholders and grades	364
Learning outcomes	365
Introduction	366
Common anxieties about assessment	366
Stakeholders in assessment	369
Common causes of failure	376
Assessment as communication	382
Summary	382
13 Writing for business and assessment	384
Learning outcomes	385
Introduction	386
Assignment planning	387
Define or refine structure	393
Developing your material	395
Drafting written assignments	402
Using report format	405
Writing essays	413
Writing within a portfolio	414
Writing clear English	415

Writing for e-reading	420
Summary	422
Additional resources	422
<i>HelpFile 13.1: Glossary of terms used in examination and assessment questions</i>	424
<i>HelpFile 13.2: Spelling (the right word)</i>	428
<i>HelpFile 13.3: Punctuation and grammar</i>	432
<i>HelpFile 13.4: If English is not your native language</i>	436
Answers to exercises	439
14 Effective presentations	440
Learning outcomes	441
Introduction	442
The risks of presenting	443
Structure	445
Delivery technique	446
Visual aids	448
Handling questions	452
Dealing with nerves	453
Preparation	453
Virtual presentations and vodcasts	454
Group presentations	455
Poster presentations	456
Summary	459
Additional resources	460
15 Examinations	462
Learning outcomes	463
Introduction	464
Objectives of different 'examinations'	464
Types of written examination	465
Common causes of failure	467
Exam preparation	471
During the examination	476
Summary	479

PART 5 COMPLETING YOUR QUALIFICATION AND USING IT

16 Academic and work-based projects and dissertations	482
Learning outcomes	483
Introduction	484

Characteristics of management research	485
Stakeholders in your project or dissertation	487
Factors influencing topic choice	492

PREFACE

This handbook was written out of a sense of frustration that so many students gained so little from their MBA studies despite a huge investment of time and effort. Thirty years of teaching later, the world is very different. Massive globalisation facilitated by the digital explosion, the financial crisis, the pandemic, (slowly) growing recognition of a climate emergency (and much more) have changed the world as we then knew it. There has also been an explosion of post-graduate management qualifications, and the text is relevant whatever MA or MSc course you are on, if it relates in any way to management or business.

It is ever more important that those in business, and taking decisions about business, have the thinking skills that the MBA and similar Master's qualifications have always been intended to develop. The skills to set aside pre-judgements, to judge the value of evidence, to assess priorities and to come up with creative responses to problems. Yet (even more frustratingly) many of the same frustrations remain. A significant proportion of students still waste a huge amount of effort because they lack the skills their course requires, or fail to understand how to apply these skills to achieve academic goals and career-relevant learning. Most of them still gain the qualification (there are powerful pressures on a teaching institution to keep pass rates high). But without the skills the qualification is intended to signify, their careers benefit little, and society benefits not at all.

So the aim of this text has not changed in 30 years, merely become more important: it is to help post-graduate management students to get value from their studies, value for themselves in terms of subsequent life success, for their employers (or themselves again, if they set up their own business) in terms of their contribution to organisational success, and to society more broadly, in terms of their contributions to successful, and socially responsible, organisations.

This text seeks to help students develop the skills and understanding they need in order to learn effectively during their course. Understanding the nature of the learning required, and the reasons for this, is the basis for developing the individual and group learning skills needed. But the text covers a wide range of learning skills that are equally important in post-graduation and for passing a course, as the contents list shows. Team and leadership skills are important for group learning. Written communication and presenting to an audience are skills that are probably even more important in business than they are to students. Evidence-based decisions require the ability to gather and interpret relevant information. Continuing professional development depends on individual and group learning, often through reflection.

The focus of this text is therefore skills that are transferrable. They will improve your grades but, more importantly, these same skills will make you more successful in life after your studies. The potential benefits are huge. But there is a price – to gain these benefits

takes more than merely reading the text. You need to think as you read, to do the activities within the text, and to reflect on, and record, your learning from the activities.

Most of the ideas on which the book is based are early explanations of ‘threshold concepts’, concepts which will change the way you think for ever. This is not laziness on my part, but because the first explanation of an idea is often the clearest. A good idea can be applied in a much wider range of situations than that from which it was derived. What has changed is the context in which these ideas are applied. Those that are included are as relevant to current contexts as they were to the decade in which they were developed.

Remember, as you work through (rather than merely read) this text that it is a handbook, not a textbook. It is not a summary of the state of knowledge on a topic – you will learn this from your course. Rather, it is a set of guidelines for thinking and action as a student, based on decades of experience as a manager, and management teacher. Judge it on pragmatic grounds, rather than using more conventional academic criteria. Does it help you learn useful things more effectively? While it is academically sound in being based on established theory and evidence, it also includes my own experience over a lifetime of teaching management and evaluating management teaching. I hope the text makes clear which is which.

As a handbook, this text can help almost all management students (a small proportion do not need it as they have the skills already) to get a far better return on their investment in a post-graduate management-related study. Much of the use will be in the first half year or so of study, with reference back to key points later on as necessary. The rest will be towards the end of your course, with its challenges of carrying out a research-based project or dissertation, and the even bigger challenge of finding a job that will exploit newly developed skills.

Enjoy your studies, and the rest of your working life!

ACKNOWLEDGEMENTS

This text could not have been written without the tolerance of (and, decades later, inputs from) my children, or without the learning I have shared with hundreds of Open University students over so many years, and with colleagues in other universities where I have been an external examiner. Thanks are also due to Penelope Woolfe, who, as my first and never surpassed editor, supported me through the first edition, and to all the other editors and reviewers who have contributed to a book that has, I hope, continued to evolve and improve over the years.

Sheila Cameron

GUIDED TOUR

Learning outcomes

By the end of this chapter you should:

- appreciate the challenges of post-graduate study of management and leadership
- understand the importance of developing your learning and management skills
- understand why you need this handbook as a valuable aid to both study and career success
- understand how the text is structured and how to use it to best effect
- have started to assess your own learning priorities and think about how and when you will use this text.

Learning outcomes appear at the start of each chapter. Think about whether they describe what you would like to gain from the chapter, and add any that you would hope to see. When you have finished a chapter refer to the learning outcomes, with any additional ones, and check the extent to which they have been achieved.

Activities are not something you can leave out to save time. Skipping them will significantly reduce the value of any time you spend on the text. Some may not be relevant to you but regard those in relevant chapters as essential, unless for some exceptional reason they do not apply to your particular situation or aims. Your thinking as you do activities will make subsequent material more obviously significant and will contribute significantly to developing relevant skills. Some activities are followed by 'Comment'. For others, the following text may build on them without specific comment. All the activities can also be accessed online using the link: go.pearson.com/uk/he/resources.

a change in the proportion of unhelpful behaviours at some point, you may also be able to think back and consider what could have caused this.

A simpler recording method focuses on capturing how the task is progressing through the main stages of the problem-solving paradigm, logging the time at which each stage is started and completed. There is unlikely to be a single pass through. Stages are often 'revisited' several times, sometimes effectively, because understanding has deepened, sometimes merely because of poor task management, or because people have not heard or not registered progress. You may find that some stages are omitted altogether, or undertaken surprisingly late. I have often observed student groups who, after much heat and little progress, ask each other plaintively, often in the last 10 minutes of an exercise, 'What are we really meant to be doing?'

At work you will often see similar failures to agree the task and clarify objectives properly.

Life Example

Early in my career I was at a large meeting to discuss the commissioning of research by a government department. Some participants were fairly senior civil servants, others more junior specialist advisers. Many proposals were discussed in great depth, and with impressive intellectual skill. After about two hours, frustrated at sitting in silence, I finally summoned up the courage to ask how much money remained in the research budget. Without knowing this, I had not felt able to contribute to the discussion. (I assumed everyone but me already knew) After some rather embarrassed debate, it emerged that almost none of the budget remained: it had all been committed many months previously!

Keppner and Tregoe (1965) found similar results in their classic work, *The Rational Manager*. They charted the progress of discussions on problems and found patterns similar to that shown in Figure 9.5. You can see how little attention is given to diagnosis and how 'disorderly' is the flow of discussion.

Figure 9.5 Keppner-Tregoe-type chart of discussion flow

Life examples demonstrate points by drawing on relevant experiences from daily life.

review and revise objectives when on the move. Experiment to find the best planning routine for you, and then follow it regularly.

Managers commonly underestimate the time required for task completion. This often stems from a genuine and confident belief that *this* task will proceed without the delays and other glitches experienced in the past with similar work. Such optimism is typical of poor time managers. If you suspect yourself of this 'planning fallacy', log your estimates for time required for tasks over the next week or two, and not actual time taken. Stark evidence of a mismatch may help you improve your estimating.

Delegate more. Delegation requires an initial time investment in training your subordinate(s), and a willingness to believe that you are not the only person who can do the job properly. It also requires absolute clarity on your part concerning the objectives of the work, a reasonable deadline, and suitable points at which progress should be reviewed. All this must be communicated clearly to the person who is to do the work, together with an idea of how the work relates to other departmental work and objectives. This understanding of the context in which the work is required will make the job far more meaningful for the subordinate, and will make it likely that any discretion needed will be exercised in an appropriate way.

'Busy' managers often feel they have no time to develop their subordinates. They do not think clearly enough about what is required to do the work well, let alone communicate this to the subordinate. As a result, the work is poorly done, the subordinate learns nothing, and the manager's view that 'It's quicker to do it myself' or even 'I'm the only one who can do it properly' is reinforced.

To direct your effort more appropriately:

- understand why you over-commit
- plan more effectively
- concentrate on important work
- delegate
- do things 'well enough'
- stop doing unimportant things.

Activity 4.8 Delegation plan

Within the next week, identify at least three areas of work that could be delegated. Plan any staff development necessary for this delegation to be successful and take steps to set this in motion. Once it is complete, start to delegate work. Ensure that objectives are understood and agree targets and review points. Leave the subordinate to get on with it between reviews. Log plans and progress in your file, and put a note in your diary for six weeks hence to review the success with which you are delegating.

Understand why you over-commit. We usually contribute to our own overload by agreeing to do more than is reasonable, either because we underestimate the demands from our current workload or those of the new task. Or we may be insecure, afraid of being left out and want to prove that we are essential to the organisation. Being busy, and involved in everything, reduces this anxiety. Sometimes, the new task may simply have looked too interesting to refuse. If there is a culture within the organisation of saying 'yes' to every piece of work assigned, agreeing to over-commitment avoids adverse notice. Or sometimes it may be that non-working life offers few rewards and working long hours is preferable to facing the demands of the family, or being alone.

Exercises are used to test your knowledge or understanding so that you can see whether you need to work through a section and/or to check your progress. They will have answers at the end of the chapter. Do not look at the answers before you do the exercise – it makes the exercise pointless and is in no way a substitute for actually doing the exercise.

176 PART 3 TRANSFERABLE LEARNING SKILLS

once you have gone over all the details, relationships and possible uses, you will have *learned* the material in question in a far richer way than merely learning by heart.

If this does not happen, rote learning or mnemonics may be needed. I still recite the colours of the rainbow, on the rare occasions when this is requested, by remembering the phrase from my childhood, 'Read out your green book in verse', and go through the entire '30 days hath September . . .' riddle to feel sure that August really does have 31 days.

An alternative to devising a phrase is to make the initials into a pronounceable word or acronym. (Remember SMART objectives?) Many authors help by going out of their way to come up with things that are, in themselves, memorable. The uncharitable might say that this, rather than the merit of what it is that they are enabling you to remember, is what has made them so popular. You will, almost certainly, encounter the 7 Ss, the 4 (or more) Ps, and many more of that ilk. Rhyming is also popular. The 'form, storm, norm, perform' sequence used in teamwork is an example. If authors have not been so helpful, you can have fun devising your own mnemonics.

If speed of recall is important, such as when you need to know what 7 × 9 is in the middle of some mental arithmetic, then learning by repetition may be preferable. But mnemonics are extremely useful for information that you might not need for several months, as they will enable you to drag from the recesses of your memory material that otherwise would be inaccessible.

Guidelines for effective reading

- Establish your purpose in reading.
- Select appropriate material.
- Scan the entire text rapidly to establish structure and coverage.
- Refine your purpose – what key points/questions are of interest?
- Read relevant parts of text at fastest appropriate speed.
- Capture your understanding by diagramming structure of arguments, highlighting text and/or note-taking.
- Review this against your purpose.
- File your notes carefully.

Many of these techniques can be used with online sources too, but there are a few additional things that can make screen reading more efficient. Some are obvious, some less so. Some are more time-consuming than others, and these you may wish to reserve for more important materials which you want to study in more depth.

Summary at the end of the chapter provides a very brief list of key points covered. Do not rely solely on this, however. Instead, make your own notes or mind map of the chapter as you read – you can then usefully compare it with that given and think about the reasons for the differences.

170 PART 3 TRANSFERABLE LEARNING SKILLS

Activity 7.2 Checking your reading speed (B)

Look at your watch again and note the time _____. Now note how long it is since you last noted the time _____. There were approximately 700 words in that piece of text. Divide that figure by the number of minutes elapsed in order to find your reading speed in words per minute. Write this down _____.

Exercise 7.1 Comprehension and retention test

Now check your comprehension by answering the following questions, saying whether each statement is true or false, according to the preceding text. **Do not glance back at the text.**

	T/F
1. Poor readers fixate once per word.	_____
2. With practice, a poor reader can increase from a speed of 100 to 1000 words per minute.	_____
3. A speed reader will fixate only once per line.	_____
4. Once you have mastered speed-reading techniques, they will become second nature.	_____
5. The only drawback to rapid reading is that it tends to reduce comprehension.	_____
6. The duration of each fixation can range from as little as 0.25 of a second to as much as 1.5 seconds.	_____

Comment

Answers are at the end of the chapter. If more than one of your answers was wrong, you should be aiming to improve your retention skills since you were specifically instructed to try to retain the information in the passage.

A reading speed of 250 or more words per minute, with reasonable retention, is an adequate basis on which to start your course. If your speed was significantly less than this, or if your present speed you are not absorbing enough, you may find the following exercises useful.

If your results suggest you would benefit from exercises to increase your reading speed, a selection is provided online. Substantial improvements can be achieved by moving your eyes more efficiently, and using a pointer to pace your reading and keep you focused. But improvement does require a significant time investment in sustained practice (usually for several weeks).

Guidelines are provided for some sections. These are a series of learning points that will help put your learning into practice. All the guidelines boxes are available online and can be accessed using the link: go.pearson.com/uk/he/resources

SUMMARY 45

Activity 2.10 Objectives tree for your life

Draw objective trees for two or three major goals in your life. Highlight any conflicts between sub-goals, either on a single tree or between trees. Think about any barriers to achieving your goals and note these. Identify areas where your studies may help you achieve your objectives. (Again, save this for future reference.)

Conflicts between objectives are common. For example, you might have one goal of getting into the squash club's first team, which would require a lot of practise and coaching, and another of obtaining your (part-time) Master's, which is also very time-consuming. If a third objective is to spend 'quality time' with your growing family, and you already have a job that requires you to put in long hours to be seen as worthy of promotion, conflicts could be impossible to resolve! Time management skills will help, but cannot work miracles.

You will need to think about how to handle any conflicts between goals. One whole set of objectives may need to be put aside until another is achieved, but remember to retain objectives to do with health, family relationships and sanity! Once your priorities have been decided you can use learning and time management skills to help you direct your efforts effectively.

In deciding how to prioritise your efforts you will need to consider not only your professional overall objectives but also your strengths and weaknesses in relation to both work and learning. Your prior educational experience will be a key factor.

SUMMARY

- MBAs and some specialist management Master's programmes have been criticised on grounds of relevance and ethics.
- A growing view sees perceptions and interpretations of reality as active constructions, and the process of learning as that of acquiring better ways of making sense of situations.
- Such learning involves unlearning old thought habits, which is best done collaboratively.
- An additional view is that 'knowing', which is embodied in action in specific situations, is more important than abstract knowledge itself.
- Thus, management education can be seen as a process of developing more effective conceptual tools and learning how to use them.
- The context of any situation is important and, when faced with complexity and rapid change, the ability to accept complexity, work with ambiguity and to learn from experience is important.
- Reflection on practice is central to ongoing professional development.
- The view that the only responsibility of an organisation is to make profit for shareholders is being questioned, since it ignores the interests of the much wider group of stakeholders. To make constructive sense of such contexts is a key management skill.

Additional resources at the end of the chapter gives details of other sources you might find useful if you want to go into more depth than the chapter allows. Do not regard the list as more than a hint – seek your own sources, which may be more relevant than those suggested.

Endnotes at the end of a chapter include additional definitions or explanations that would break up the text and might be of interest to only a few readers. A small number after a word will indicate the place of a relevant note in the list for that chapter.

164 PART 3 TRANSFERABLE LEARNING SKILLS

Endnotes

¹ A heuristic is a mental shortcut or 'rule-of-thumb' that allows people to solve problems and make judgements or take decisions quickly and (normally) efficiently.

² Product, price, place and promotion + people, process and physical evidence.

³ Strengths, weaknesses, opportunities and threats.

⁴ Specific, measurable, achievable, relevant and time-defined objectives.

⁵ Instrumental learning is learning only what is needed to do well in assessments, rather than for any wider purpose.

⁶ If you have time, you might like to find out more about the thinking behind this by searching the Internet on this quotation. It may give you a deeper understanding of the role of conceptual processes.

46 PART 1 UNDERSTANDING THE CHALLENGE

- Learning objectives need to fit with wider life and career aims.
- Assessments of your current strengths and weaknesses as a manager and/or learner should be based on as much evidence as possible, and should be the starting point for deciding on learning aims and objectives.
- An objectives tree or hierarchy of objectives may be helpful in structuring objectives.
- If you are studying in an unfamiliar culture, some of your learning aims may relate to learning to operate with different social and academic rules.

HelpFiles at the end of a chapter contain basic teaching materials or definitions that may be helpful for students who are relatively new to a topic.

424 PART 4 SKILLS FOR ASSESSMENT

HELPPFILE 13.1
GLOSSARY OF TERMS
USED IN EXAMINATION AND
ASSESSMENT QUESTIONS

If you are not used to answering assignment questions in social science subjects, the following interpretation of terms commonly used may help you to be sure that you are meeting the requirements of the question.

Analyse

This means to examine part by part. Thus, if you are asked to analyse a problem situation, you would be looking for the roots of the problem, rather than merely describing the symptoms that are presented. Normally you would be expected to draw heavily on ideas and frameworks in the course being assessed in order to identify the root causes. The analysis may be the basis for suggesting possible ways forward and deciding between them.

Comment

This terse instruction may appear after a quotation or other statement. You are required to respond in a way that shows that you understand the topic to which the statement refers. Thus, you might need to define any terms contained, explain the significance of the statement and possibly evaluate it (see below), or state the extent to which you agree and disagree, and give your reasons for this.

Compare

This means look for both similarities and differences between the (usually) two things mentioned. It is very easy to forget one or the other, and safest always to think of 'compare' as shorthand for 'compare and contrast'. Normally you would be expected to describe the similarities and differences and perhaps come down in favour of one or the other. Sometimes it is possible to do this comparison using a table, with one column for each of the things being compared, perhaps with a third column for comments.

Marginal icons include:

Chapter flags in margins indicate past chapters on which the material builds, and future chapters where it is developed further, so that you can have a quick look forwards or backwards if you need to.

To direct your effort more appropriately:

- understand why you over-commit
- plan more effectively
- concentrate on important work
- delegate
- do things 'well enough'
- stop doing unimportant things.

Boxed summaries partly in margins at the start of a longer section. These outline key points to be covered. They can be useful as orientation and as a reference point later.

to indicate that an online resource is available from go.pearson.com/uk/he/resources. It includes all the activities and guidelines from the book, proformas for activities, together with multiple choice questions and any additional notes so that you can have them to hand in class or when working through a chapter.

to show when group discussion would be useful.

to show where notes could usefully be saved in a file, or made in a learning journal. You will need to get a notebook and/or create a file in which you keep your responses to activities and other thoughts as a record of your learning experiences. Your record helps you engage with the materials, makes study more interesting and motivating, can provide a startling record of how much you have progressed, and could form part of a portfolio for assessment.

PART 1

UNDERSTANDING THE CHALLENGE

If you understand the context in which you are studying, the challenges and opportunities it presents and how this text will help you succeed as a student, everything will make a lot more sense. You will enjoy your course more, be more relaxed, and direct your efforts towards what is important. This first part addresses these issues of context.

- 1** Orientation to postgraduate management learning and the role of the handbook
- 2** Theory, practice and ethics in management learning

1

**ORIENTATION TO
POSTGRADUATE
MANAGEMENT
LEARNING AND
THE ROLE OF
THE HANDBOOK**

Learning outcomes

By the end of this chapter you should:

- appreciate the challenges of post-graduate study of management and leadership
- understand the importance of developing your learning and management skills
- understand why you need this handbook as a valuable aid to both study and career success
- understand how the text is structured and how to use it to best effect
- have started to assess your own learning priorities and think about how and when you will use this text.

Introduction

This text aims to help you develop the skills you will need to do well at postgraduate level, and to show how the same skills can contribute to career success as a manager. Studying management, leadership and related subjects at postgraduate (P/G) level presents challenges that few students expect, and that cause more than a few to drop out, or to do less well than they had hoped. This is a huge waste of the considerable investment – of time and emotion, as well as of money – these students will have made. To succeed, and to maximise the return on your own investment, you need to understand these challenges you will face and prepare yourself for them.

You also need to understand your own mix of strengths and weaknesses. You may have a strong academic background, either in a relevant or very different subject, or have come through a more vocational route. You may have considerable senior management experience (and may be studying while still managing) or be studying full time soon after gaining your first degree, with no management experience at all. You may be studying in a familiar or unfamiliar cultural and educational context. You may be studying as part of a work-based scheme, with substantial support from your organisation, or trying to keep your study secret from your employers. There are advantages and disadvantages of most combinations of positions on these dimensions. Your particular mix of challenges – and opportunities – will be specific to you!

If you want to gain full value from your programme, and gain the grades you aim for, you need to understand your own strengths and weaknesses in relation to your chosen programme, and to appreciate the way management is currently conceived. This will determine the kind of learning that is therefore needed for success as a student and as a manager. This handbook is designed to help with both these requirements.

To use this text to help you learn, you need to understand something about the structure of the text. This section provides an overview of some of the main characteristics and challenges of postgraduate (P/G) learning, and the role of the handbook in helping you meet them. The rest of the chapter expands on this and starts a process of identifying your own specific learning priorities, and planning to address these.

As you work through the text, your learning and practice will develop. Pointers to other chapters in the margin will show where to look in the text for further development of topics. A key aim of this chapter is to provide an overview of key topics in the text and lay the **necessary** groundwork and motivation for this subsequent work. So do spend a little time working through it.

Obvious and less obvious challenges of study at this level

Time management is a vital skill for study and work. Failure to devote enough time to study is the main reason for student underachievement and drop-out. Even full-time students struggle. Studying while working has many advantages, but can present major conflicts in terms of demands on your time. Even if an employer notionally allows time off for study, they all too often do not, or cannot, reduce job demands in line with this.

 Ch 4

Finding study time will be a major challenge for almost all students, as will be making the best possible use of this precious resource. (Note that a chapter number in the margin such as that on the left indicates that the chapter(s) flagged deal with the topic in more detail.)

 Ch 3

An associated challenge is **keeping yourself motivated** when time pressures become intense, or material is difficult, or you are not doing as well as you hoped. This is more likely to happen if you allow such stresses to affect your sleep or your health, perhaps by not eating and exercising properly. Motivation can also drop if you lose sight of your goals in studying.

 Ch 7

The sheer **volume of material** you need to get through may well be a challenge depending on your reading and notetaking skills. As well as set text, the internet is awash with potentially useful material, and with a lot of rubbish. Some students spend far too long learning text, rather than thinking about it. Some lack the skills for **selecting materials** that are particularly relevant to their current issue and spend time on irrelevant or unreliable materials.

 Chs 6,7

Another common challenge is the shift in **the demands on your thought processes**. Most management programmes will require a far more active and critical approach to your learning than you may be used to, particularly if you studied a ‘fact-based’ course, and/or studied in a country where students are seen as passive recipients of a teacher’s knowledge and assessed mainly on their recall of what they have been taught rather than their ability to criticise and apply this knowledge. If your study to date has been outside the educational system in which you are a postgraduate, you will need to be alert to, and adapt to, any such differences. Similarly, if your background is in hard rather than social science, you may need to learn to think and write more critically than in the past. A background in arts may indicate more difficulty with application of ideas to practice. If you are alert to these particular challenges, and their roots in your past experience, you may find it easier to identify and accept the changes you need to make.

The reason management education requires **applying abstract ideas** to very concrete situations is that while management is a respectable area of academic study and research, most students aim to have a career in management rather than academia. Ideas therefore need to be useful in the sense of leading to better strategic decisions and effective day-to-day management to implement these decisions. Abstract ideas do this by helping you to make better sense of your experiences so that you can learn from them more effectively, and giving you a wider range of perceived options.

Both major decisions and everyday practice take place in hugely **complex organisational and wider contexts**. Many factors are involved, and there are many more inter-relationships between them that will affect outcomes. Often, the nature of these relationships is uncertain, as are the ways in which external factors will change, for example as the economy fluctuates, legislation is introduced, or technology offers completely new possibilities.

Application of ideas therefore requires the recognition of the complexities of any situation, and tools for thinking about what may at first seem ‘too complicated’. Much of the theory you will learn will be intended to provide tools for this. **Systems thinking**¹ is essential here, as it provides ways of capturing factors and relationships within and between organisations and the wider environment.

Chs 7,10

Other theory and research will need a **critical approach**, one which questions whether it is based on evidence that is strong and relevant enough to help in the present situation. It is important, too, to ensure that the range of theories you are using to make sense of a situation is broad enough to cast light on the key aspects of the issue, rather than ‘oversimplifying’ some of them out of existence. Humans have a strong tendency to leap to ‘obvious’ solutions which are far simpler than the situation demands.

Chs 2,6

The demands on you will change as you progress to more senior roles, for example issues will become more complex. Changes in the organisation and its environment will add to the degree of change you will face. A key requirement of any profession is that its members commit to an ongoing process of continuing professional development (CPD), usually through **reflection on practice** (Kolb, 1984) informed by theory – the ideas you learned through qualification studies, and subsequent reading and training. You are likely to be required to develop your ability to reflect productively on your practice, and, to capture this reflection and the plans that result from it, often in the form of a **reflective log** or learning journal. This can be a real challenge for many students, who as a result ‘go through the motions’ rather than develop this crucial learning skill.

Ch 2

Growing power differentials within organisations, the growing power of multinationals in relation to governments, and increasing realisation of the impact of growth-based economies on the planet are now posing significant ethical questions. **Management ethics** is another area full of uncertainties, where views differ as to what is ‘right’ depending on cultural and political backgrounds. Growing inequality and climate threats are causing many to question the view that organisations have a moral obligation to maximise profit for their shareholders, no matter what impact this has on individuals or economies. They are questioning the ethics of relying on markets as the main controlling factor in an economic system, and on growth as the main goal. Senior managers will need the skills to deal with such questions, and the likely radical changes that some of the answers may require.

Chs 2,10

The ease with which you learn about organisational issues will depend in part on your experience of management (or of being managed) prior to study and on whether you are studying part time while working, or have taken time out to study full time. If you are working while studying, you may be able to talk with colleagues in other parts of the organisation about their experience with issues in your course. If you are studying before gaining management experience, you will need to find other ways of ‘connecting’ to management challenges. You may find family and friends who are managers are an important source of practical experience. Whatever your background, learning from the case studies you encounter in your programme will be important.

Ch 9

Teamwork is vital in organisations and will be the basis of much of your learning. A real challenge for many students is to think more flexibly, so that a shared approach emerges from the team, even if they initially saw things differently. Often, teams do poorly because members are not prepared to listen properly to others, and stick to their own position even when others are making a strong argument for a different view. Often, this is because they are not aware of the extent to which their views are limited by their underlying assumptions about the situation, or indeed the world. **Dialogue** in teams can uncover such assumptions, and potentially lead to far more creative and constructive results. Dialogue requires careful, open-minded listening, and the self-confidence to accept that there

may be more valid assumptions than your own. The ability to dialogue effectively may distinguish a good manager from an excellent one.

As well as the **personal management skills** and general conceptual challenges your programme may pose, you may have concerns about specific skills. Common student concerns are **understanding** and **analysing numerical data**, especially in the area of finance, and when it comes to doing your own research, coping with writing assignments and exams, and making presentations on group projects. Your programme may assume a knowledge level you feel you do not have, and so does not offer refresher courses in these areas. Programmes are, however, likely to provide online resources. The relevant chapters in this handbook may go some way to reduce any anxieties and help you make better use of any resources provided.

 **Chs 11,
12,13,
14,15**

Key challenges include:

- Managing time
- Managing yourself
- Engaging with learning actively and proactively
- Planning and managing your own learning
- Letting go of assumptions
- Accepting complexity
- Drawing on background academic skills.

To summarise, changing your thinking is necessary if you are to *learn* effectively (individually and in a group). You need to *think* critically and reflectively and to face up to *complexity*. You will also need to be prepared to ‘unlearn’ things you think you know, to challenge long-held assumptions, and to be self-critical. This requires a degree of self-confidence, and the acceptance that no one, including yourself, is perfect. For some students, this is a major challenge.

Effective management learning demands that you take **an active, proactive and interactive approach** to your learning about relevant aspects of the organisational world. What may be less obvious is that you need to take a similar approach to yourself. Personal management skills are essential for success in study and in work. If you can diagnose your own learning priorities in the light

of your understanding of what is needed for your course, and of your own background and strengths and weaknesses, you will learn far more from your course (and get better grades). At the end of this chapter you will start a process of planning what to study in depth and how to study it. You will develop your plans throughout your use of the text, and beyond.

 **Ch 2**

Engaging with your learning

Engaging with your learning means taking charge of it and shaping it to meet your particular needs. This requires, above all, that you work out what is most important for you to learn, and then manage your learning to achieve this. Passive absorption will not be enough. Active learning requires you to be constantly:

- **thinking** – this requires a process of comparing where you are at with how you currently see things with what you are discovering about them
- **experimenting with ideas** – this means trying out different ways of thinking about things to see where they lead you
- **planning your learning** – this requires working out the gap between where you are now and what you want to achieve, and then looking at the resources you will need to achieve your learning goal. Resources might include time, information and input from others.

 **Chs 3,16**
