ABOUT THE AUTHORS

Zvi Bodie

Boston University

Zvi Bodie is the Norman and Adele Barron Professor of Management at Boston University. He holds a PhD from the Massachusetts Institute of Technology and has served on the finance faculty at the Harvard Business School and MIT's Sloan School of Management. Professor Bodie has published widely on pension finance and investment strategy in leading professional journals. In cooperation with the Research Foundation of the CFA Institute, he has recently produced a series of webcasts and a monograph entitled "The Future of Life Cycle Saving and Investing."

Alex Kane

University of California, San Diego

Alex Kane is professor of finance and economics at the Graduate School of International Relations and Pacific Studies at the University of California, San Diego. He has been visiting professor at the Faculty of Economics, University of Tokyo; Graduate School of Business, Harvard; Kennedy School of Government, Harvard; and research associate, National Bureau of Economic Research. An author of many articles in finance and management journals, Professor Kane's research is mainly in corporate finance, portfolio management, and capital markets, most recently in the measurement of market volatility and pricing of options.

Alan J. Marcus

Boston College

Alan Marcus is the Mario J. Gabelli Professor of Finance in the Carroll School of Management at Boston College. He received his PhD in economics from MIT. Professor Marcus has been a visiting professor at the Athens Laboratory of Business Administration and at MIT's Sloan School of Management, and has served as a research associate at the National Bureau of Economic Research. Professor Marcus has published widely in the fields of capital markets and portfolio management. His consulting work has ranged from new-product development to provision of expert testimony in utility rate proceedings. He also spent two years at the Federal Home Loan Mortgage Corporation (Freddie Mac), where he developed models of mortgage pricing and credit risk. He currently serves on the Research Foundation Advisory Board of the CFA Institute.

Lorne N. Switzer

John Molson School of Business, Concordia University

Lorne N. Switzer is a professor of finance and holds the Van Berkom Endowed Chair in Small Cap Equities at the John Molson School of Business (JMSB) at Concordia University. He has published widely in the areas of investments, portfolio management, derivatives, and corporate governance in leading finance and economics journals, and serves on the editorial boards of *European Financial Management* and *La Revue du FINANCIER*. He has done consulting work for many business firms and government organizations including the Bourse de Montréal; Caisse de Dépôt et Placement du Québec; AMI Partners, Inc.; Bank Credit Analysts Research Group; the C.D. Howe Institute; Keugler Kandestin LLC; Schlesinger, Newman, and Goldman; the Government of Canada; and the Gouvernement du Québec. He is a graduate of the Wharton School and obtained his PhD from the University of Pennsylvania in 1982.

Dana Boyko

Rotman School of Management, University of Toronto

Dana Boyko is an assistant professor, teaching stream, at the Rotman School of Management at the University of Toronto. She has more than 25 years' experience working in capital markets and portfolio management within BMO Financial Group, CIBC, and RBC Financial Group in a variety of roles, including private client portfolio manager, investment strategist, and investment manager oversight. She holds both the Chartered Financial Analyst (CFA) and Chartered Alternative Investment Analyst (CAIA) designations. She has taught CFA exam preparation courses at all three exam levels and is a past member of the board of directors of CFA Society Toronto.

Christine A. Panasian

Sobey School of Business, Saint Mary's University

Christine Panasian is an associate professor of finance at the Sobey School of Business at Saint Mary's University, in Halifax, Nova Scotia. She received her PhD in finance from The Rawls College of Business at Texas Tech University in 2008 and was a visiting professor at the Robins School of Business at the University of Richmond, VA, before joining the Sobey School of Business in 2011. Her research topics cover the greater area of corporate finance, touching corporate governance and the regulatory and litigation environments, ownership structure, and executive compensation and their impact on firm valuation. More recently she published articles in the area of real estate finance. Her research work has been published in, among others, *The Financial Review*, *Real Estate Economics*, *Journal of Risk and Insurance*, *The International Journal of Accounting*, and *The Journal of Financial Research*.

Maureen Stapleton

Rotman School of Management, University of Toronto

Maureen Stapleton is an associate professor, teaching stream, in finance at the Rotman School of Management at the University of Toronto. She joined the Rotman faculty in 2008, following a 25-year career at UBS Global Asset Management and RBC, where she focused on the management of large endowments and pension funds. She holds the Chartered Financial Analyst (CFA) designation, is a past member of CFA Society Toronto board of directors and a past president of Women in Capital Markets.

BRIEF CONTENTS

Preface xiv

PART I

INTRODUCTION

- 1 The Investment Environment 1
- 2 Financial Markets, Asset Classes and Financial Instruments 25
- 3 How Securities Are Traded 70
- 4 Mutual Funds and Other Investment Companies 116

PART II

PORTFOLIO THEORY AND PRACTICE

- 5 Risk, Return, and the Historical Record 139
- 6 Capital Allocation to Risky Assets 175
- 7 Optimal Risky Portfolios 205
- 8 Index Models 251

PART III

EQUILIBRIUM IN CAPITAL MARKETS

- 9 The Capital Asset Pricing Model 285
- 10 Arbitrage Pricing Theory and Multifactor Models of Risk and Return 314
- 11 The Efficient Market Hypothesis 336
- 12 Behavioural Finance and Technical Analysis 377
- 13 Empirical Evidence on Security Returns 401

PART IV

FIXED-INCOME SECURITIES

- 14 Bond Prices and Yields 432
- 15 The Term Structure of Interest Rates 471
- 16 Managing Bond Portfolios 497

PART V

SECURITY ANALYSIS

- 17 Macroeconomic and Industry Analysis 534
- 18 Equity Valuation Models 565
- 19 Financial Statement Analysis 608

PART VI

OPTIONS, FUTURES, AND OTHER DERIVATIVES

- 20 Options Markets: Introduction 651
- 21 Option Valuation 689
- 22 Futures Markets 733
- 23 Futures, Swaps, and Risk Management 764

PART VII

APPLIED PORTFOLIO MANAGEMENT

- 24 Portfolio Performance Evaluation 798
- 25 International Diversification 837
- 26 Hedge Funds 865
- 27 The Theory of Active Portfolio Management 889
- 28 Investment Policy and the Framework of the CFA Institute 913

CONTENTS

Preface xiv

PART I

INTRODUCTION

CHAPTER 1

The Investment Environment 1

- 1.1 Real Assets versus Financial Assets 2
- 1.2 Financial Assets 3
- 1.3 Financial Markets and the Economy 4
 - The Informational Role of Financial Markets 4
 - Consumption Timing 5
 - Allocation of Risk 5
 - Separation of Ownership and Management 5
 - Corporate Governance and Corporate Ethics 7
- 1.4 The Investment Process 8
- 1.5 Markets Are Competitive 9
 - The Risk–Return Trade-Off 9
 - Efficient Markets 10
- 1.6 The Players 10
 - Financial Intermediaries 11
 - Investment Bankers 12
 - Venture Capital and Private Equity 13
- 1.7 The Financial Crisis of 2008 13
 - Antecedents of the Crisis 14
 - Changes in Housing Finance 16
 - Mortgage Derivatives 17
 - Credit Default Swaps 18
 - The Rise of Systemic Risk 18
 - The Shoe Drops 19
 - The Dodd–Frank Reform Act 20
 - The Canadian Experience of the Financial Crisis 21
- 1.8 Outline of the Text 21
- End of Chapter Material 22

CHAPTER 2

Financial Markets, Asset Classes, and Financial Instruments 25

- 2.1 The Money Market 26
 - Treasury Bills 26
 - Certificates of Deposit 28
 - Commercial Paper 28
 - Bankers’ Acceptances 28
 - Repos and Reverses 30
 - The Bank of Canada Overnight Rate and the U.S. Federal Funds Rate 31
 - Brokers’ Call Loans 31
 - The LIBOR Market 31
 - Yields on Money Market Instruments 32
 - T-Bill Yields 33

- 2.2 The Bond Market 35
 - Government of Canada Bonds 36
 - Inflation-Protected Bonds 39
 - Provincial Bonds 40
 - Corporate Bonds 40
 - Municipal Bonds 41
 - International Bonds 44
 - Mortgages and Mortgage-Backed Securities 44
- 2.3 Equity Securities 46
 - Common Stock as Ownership Shares 46
 - Characteristics of Common Stock 47
 - Stock Market Listings 48
 - Income Trusts 48
 - Preferred Stock 50
 - Depository Receipts 51
- 2.4 Stock and Bond Market Indexes 51
 - Stock Market Indexes 51
 - Toronto Stock Exchange Indexes 51
 - Dow Jones Averages 53
 - Standard & Poor’s U.S. Indexes 56
 - Other U.S. Market-Value Indexes 57
 - Equally Weighted Indexes 57
 - Other Foreign and International Stock Market Indexes 59
 - Bond Market Indicators 59
- 2.5 Derivative Markets 60
 - Options 60
 - Futures Contracts 63
 - Other Derivative Assets: Warrants, Swaps, and Hybrid Securities 65
- End of Chapter Material 65

CHAPTER 3

How Securities Are Traded 70

- 3.1 How Firms Issue Securities 70
 - Privately Held Firms 71
 - Publicly Traded Companies 72
 - Shelf Registration 73
 - Short Form Prospectus Distribution System (SFPD) 73
 - Initial Public Offerings 74
- 3.2 How Securities Are Traded 77
 - Types of Markets and Orders 77
 - Types of Orders 78
 - Trading Mechanisms 80
 - The Execution of Trades 82
 - Settlement 84
 - The Rise of Electronic Trading 84
- 3.3 Securities Markets 86
 - The Toronto Stock Exchange 86
 - The Bond Market 89
 - U.S. Markets 89
 - NASDAQ 90

The New York Stock Exchange	91
ECNs	91
New Trading Strategies	91
Foreign Markets	94
Derivative Markets	95
3.4 Trading Costs	95
Internet Investing	96
3.5 Trading with Margin and Short Sales	97
Trading with Margin	97
Buying on Margin	97
Short Sales	100
3.6 Regulation of Securities Markets	103
Regulatory Responses to Recent Scandals and the 2008–09 Financial Crisis	105
Self-Regulation and Circuit Breakers	106
Short-Selling Circuit Breakers	107
Insider Trading	107
End of Chapter Material	110
Appendix 3A: A Detailed Margin Position	114

CHAPTER 4

Mutual Funds and Other Investment Companies 116

4.1 Investment Companies	116
4.2 Types of Investment Companies	117
Other Investment Organizations	119
4.3 Mutual Funds	120
Investment Policies	120
How Funds Are Sold	122
4.4 Costs of Investing in Mutual Funds	122
Fee Structure	122
Fees and Mutual Fund Returns	124
4.5 Taxation of Mutual Fund Income	126
4.6 Exchange-Traded Funds	126
4.7 Mutual Fund Investment Performance: A First Look	130
4.8 Information on Mutual Funds	133
End of Chapter Material	135

PART II

PORTFOLIO THEORY AND PRACTICE

CHAPTER 5

Risk, Return, and the Historical Record 139

5.1 Determinants of the Level of Interest Rates	140
Real and Nominal Rates of Interest	140
The Equilibrium Real Rate of Interest	141
The Equilibrium Nominal Rate of Interest	142
Taxes and the Real Rate of Interest	143
5.2 Comparing Rates of Return for Different Holding Periods	143
Annual Percentage Rates	144
Continuous Compounding	145

5.3 Bills and Inflation, 1957–2016	146
5.4 Risk and Risk Premiums	147
Holding-Period Returns	147
Expected Return and Standard Deviation	147
Excess Returns and Risk Premiums	149
5.5 Time Series Analysis of Past Rates of Return	149
Time Series versus Scenario Analysis	149
Expected Returns and the Arithmetic Average	150
The Geometric (Time-Weighted) Average Return	150
Variance and Standard Deviation	152
Mean and Standard Deviation Estimates from Higher-Frequency Observations	153
The Reward-to-Volatility (Sharpe) Ratio	153
5.6 The Normal Distribution	154
5.7 Deviations from Normality and Alternative Risk Measures	156
Value at Risk	158
Expected Shortfall	158
Lower Partial Standard Deviation and the Sortino Ratio	158
Relative Frequency of Large, Negative 3-Sigma Returns	159
5.8 Historic Returns on Risky Portfolio	159
A Global View of the Historical Record	165
5.9 Long-Term Investments	166
Short-Run versus Long-Run Risk	168
Forecasts for the Long Haul	169
End of Chapter Material	170

CHAPTER 6

Capital Allocation to Risky Assets 175

6.1 Risk and Risk Aversion	175
Risk, Speculation, and Gambling	176
Risk Aversion and Utility Values	176
Estimating Risk Aversion	180
6.2 Capital Allocation Across Risky and Risk-Free Portfolios	181
6.3 The Risk-Free Asset	183
6.4 Portfolios of One Risky Asset and a Risk-Free Asset	184
6.5 Risk Tolerance and Asset Allocation	187
Non-normal Returns	191
6.6 Passive Strategies: The Capital Market Line	192
End of Chapter Material	194
Appendix 6A: Risk Aversion, Expected Utility, and the St. Petersburg Paradox	201
Appendix 6B: Utility Functions and Risk Premiums	204

CHAPTER 7

Optimal Risky Portfolios 205

7.1 Diversification and Portfolio Risk	206
7.2 Portfolios of Two Risky Assets	207
7.3 Asset Allocation with Stocks, Bonds, and Bills	214
Asset Allocation with Two Risky Asset Classes	214
7.4 The Markowitz Portfolio Optimization Model	219

Security Selection	219
Capital Allocation and the Separation Property	222
The Power of Diversification	224
Asset Allocation and Security Selection	226
Optimal Portfolios and Non-normal Returns	227
7.5 Risk Pooling, Risk Sharing, and the Risk of Long-Term Investments	227
Risk Pooling and the Insurance Principle	228
Risk Sharing	229
Diversification and the Sharpe Ratio	230
Time Diversification and the Investment Horizon	230
End of Chapter Material	232
Appendix 7A: A Spreadsheet Model for Efficient Diversification	241
Appendix 7B: Review of Portfolio Statistics	244

CHAPTER 8

Index Models 251

8.1 A Single-Factor Security Market	251
The Input List of the Markowitz Model	251
Systematic versus Firm-Specific Risk	252
8.2 The Single-Index Model	254
The Regression Equation of the Single-Index Model	254
The Expected Return–Beta Relationship	255
Risk and Covariance in the Single-Index Model	255
The Set of Estimates Needed for the Single-Index Model	256
The Index Model and Diversification	258
8.3 Estimating the Single-Index Model	260
The Security Characteristic Line for Suncor	260
The Explanatory Power of the SCL for Suncor	261
The Estimate of Alpha	262
The Estimate of Beta	263
Firm-Specific Risk	265
8.4 The Industry Version of the Index Model	265
Company Beta Estimates	266
Predicting Betas	267
Index Models and Tracking Portfolios	269
Portfolio Construction Using the Single-Index Model with a Detailed Example	271
Alpha and Security Analysis	271
The Index Portfolio as an Investment Asset	272
The Single-Index-Model Input List	273
The Optimal Risky Portfolio in the Single-Index Model	273
The Information Ratio	275
Summary of Optimization Procedure	276
An Example	276
Correlation and Covariance Matrix	276
Is the Index Model Inferior to the Full-Covariance Models?	280
End of Chapter Material	280

PART III

EQUILIBRIUM IN CAPITAL MARKETS

CHAPTER 9

The Capital Asset Pricing Model 285

9.1 The Capital Asset Pricing Model	285
Why Do All Investors Hold the Market Portfolio?	287
The Passive Strategy Is Efficient	288
The Risk Premium of the Market Portfolio	289
Expected Returns on Individual Securities	290
The Security Market Line	293
The CAPM and the Single-Index Market	295
9.2 Assumptions and Extensions of the CAPM	295
Identical Input Lists	296
Risk-Free Borrowing and the Zero-Beta Model	296
Labour Income and Non-traded Assets	297
A Multi-period Model and Hedge Portfolios	299
A Consumption-Based CAPM	300
Liquidity and the CAPM	302
9.3 The CAPM and the Academic World	305
9.4 The CAPM and the Investment Industry	306
End of Chapter Material	307

CHAPTER 10

Arbitrage Pricing Theory and Multifactor Models of Risk and Return 314

10.1 Multifactor Models: An Overview	315
Factor Models of Security Returns	315
10.2 Arbitrage Pricing Theory	317
Arbitrage, Risk Arbitrage, and Equilibrium	317
Well-Diversified Portfolios	318
Diversification and Residual Risk in Practice	320
Executing Arbitrage	321
The No-Arbitrage Equation of the APT	322
10.3 The APT, the CAPM, and the Index Model	324
The APT and the CAPM	324
The APT and Portfolio Optimization in a Single-Index Market	325
10.4 A Multifactor APT	326
10.5 The Fama–French (FF) Three-Factor Model	328
End of Chapter Material	330

CHAPTER 11

The Efficient Market Hypothesis 336

11.1 Random Walks and the Efficient Market Hypothesis	336
Competition as the Source of Efficiency	338
Versions of the Efficient Market Hypothesis	340
11.2 Implications of the EMH	342
Technical Analysis	342
Fundamental Analysis	343
Active versus Passive Portfolio Management	344

The Role of Portfolio Management in an Efficient Market	345
Resource Allocation	346
11.3 Event Studies	347
11.4 Are Markets Efficient?	350
The Issues	350
Weak-Form Tests: Patterns in Stock Returns	352
Predictors of Broad Market Returns	354
Semistrong Tests: Market Anomalies	355
Strong-Form Tests: Inside Information	360
Interpreting the Anomalies	361
Bubbles and Market Efficiency	364
11.5 Mutual Fund and Analyst Performance	365
Stock Market Analysts	365
Mutual Fund Managers	366
So, Are Markets Efficient?	370
End of Chapter Material	370

CHAPTER 12

Behavioural Finance and Technical Analysis 377

12.1 The Behavioural Critique	378
Information Processing	378
Behavioural Biases	380
Affect	381
Limits to Arbitrage	382
Limits to Arbitrage and the Law of One Price	383
Bubbles and Behavioural Economics	386
Evaluating the Behavioural Critique	387
12.2 Technical Analysis and Behavioural Finance	388
Trends and Corrections	388
Sentiment Indicators	392
Indicators of Overall Market Sentiment	393
A Warning	394
End of Chapter Material	394

CHAPTER 13

Empirical Evidence on Security Returns 401

13.1 The Index Model and the Single-Factor APT	402
The Expected Return–Beta Relationship	402
Tests of the CAPM	403
Canadian Tests of the CAPM	404
Thin Trading	404
The Market Index	405
Measurement Error in Beta	406
13.2 Tests of the Multifactor CAPM and APT	408
Labour Income	409
Private (Non-traded) Business	411
Early Versions of the Multifactor CAPM and APT	412
A Macro Factor Model	412
13.3 Fama–French-Type Factor Models	413
Size and B/M as Risk Factors	416
Behavioural Explanations	418
Momentum: A Fourth Factor	419
13.4 Liquidity and Asset Pricing	420

13.5 Consumption-Based Asset Pricing and the Equity Premium Puzzle	422
Consumption Growth and Market Rates of Return	423
Expected versus Realized Returns	425
Survivorship Bias	426
Extensions to the CAPM May Resolve the Equity Premium Puzzle	427
Liquidity and the Equity Premium Puzzle	428
Behavioural Explanations of the Equity Premium Puzzle	428
End of Chapter Material	429

PART IV

FIXED-INCOME SECURITIES

CHAPTER 14

Bond Prices and Yields 432

14.1 Bond Characteristics	432
Canadian Government Bonds	433
Corporate Bonds	434
Preferred Stock	436
International Bonds	437
Innovation in the Bond Market	438
14.2 Bond Pricing	440
Bond Pricing between Coupon Dates	443
14.3 Bond Yields	445
Yield to Maturity	445
Yield to Call	447
Realized Compound Return versus Yield to Maturity	449
14.4 Bond Prices Over Time	450
Yield to Maturity versus Holding-Period Return	452
Zero-Coupon Bonds and Stripped Coupons	453
After-Tax Returns	454
14.5 Default Risk and Bond Pricing	455
Junk Bonds	455
Determinants of Bond Safety	457
Bond Indentures	458
Yield to Maturity and Default Risk	460
Credit Default Swaps	462
Credit Risk and Collateralized Debt Obligations	463
End of Chapter Material	464

CHAPTER 15

The Term Structure of Interest Rates 471

15.1 The Yield Curve	471
Bond Pricing	472
15.2 The Yield Curve and Future Interest Rates	474
The Yield Curve Under Certainty	474
Holding-Period Returns	476
Forward Rates	477

- 15.3 Interest Rate Uncertainty and Forward Rates 479
- 15.4 Theories of the Term Structure 481
 - The Expectations Hypothesis 481
 - Liquidity Preference 482
- 15.5 Interpreting the Term Structure 485
- 15.6 Forward Rates as Forward Contracts 488
- End of Chapter Material 490

CHAPTER 16

Managing Bond Portfolios 497

- 16.1 Interest Rate Risk 497
 - Interest Rate Sensitivity 498
 - Duration 500
 - What Determines Duration? 503
- 16.2 Convexity 507
 - Why Do Investors Like Convexity? 509
 - Duration and Convexity of Callable Bonds 509
 - Duration and Convexity of Mortgage-Backed Securities 511
- 16.3 Passive Bond Management 512
 - Bond-Index Funds 512
 - Immunization 514
 - Cash Flow Matching and Dedication 520
 - Other Problems with Conventional Immunization 521
- 16.4 Active Bond Management 522
 - Sources of Potential Profit 522
 - Horizon Analysis 523
- End of Chapter Material 524

PART V

SECURITY ANALYSIS

CHAPTER 17

Macroeconomic and Industry Analysis 534

- 17.1 The Global Economy 535
- 17.2 The Domestic Macroeconomy 537
 - Key Economic Indicators 538
- 17.3 Demand and Supply Shocks 539
- 17.4 Federal Government Policy 540
 - Fiscal Policy 540
 - Monetary Policy 540
 - Supply-Side Policies 541
- 17.5 Business Cycles 542
 - The Business Cycle 542
 - Economic Indicators 543
 - Other Indicators 546
- 17.6 Industry Analysis 547
 - Defining an Industry 547
 - Sensitivity to the Business Cycle 549
 - Sector Rotation 552
 - Industry Life Cycles 553
 - Industry Structure and Performance 555
- End of Chapter Material 557

CHAPTER 18

Equity Valuation Models 565

- 18.1 Valuation by Comparables 565
 - Limitations of Book Value 567
- 18.2 Intrinsic Value versus Market Price 567
- 18.3 Dividend Discount Models 569
 - The Constant-Growth DDM 570
 - Convergence of Price with Intrinsic Value 573
 - Stock Prices and Investment Opportunities 574
 - Life Cycles and Multi-stage Growth Models 576
 - Multi-stage Growth Models 581
- 18.4 Price–Earnings Ratio 581
 - The Price–Earnings Ratio and Growth Opportunities 581
 - P/E Ratios and Stock Risk 585
 - Pitfalls in P/E Analysis 586
 - Combining P/E Analysis and the DDM 589
 - Other Comparative Valuation Ratios 589
- 18.5 Free Cash Flow Valuation Approaches 590
 - Comparing the Valuation Models 592
 - The Problem with DCF Models 593
- 18.6 The Aggregate Stock Market 594
- End of Chapter Material 596

CHAPTER 19

Financial Statement Analysis 608

- 19.1 The Major Financial Statements 608
 - The Income Statement 608
 - The Balance Sheet 610
 - The Statement of Cash Flows 612
- 19.2 Measuring Firm Performance 614
- 19.3 Profitability Measures 614
 - Return on Assets (ROA) 615
 - Return on Capital (ROC) 615
 - Return on Equity (ROE) 615
 - Financial Leverage and ROE 615
 - Economic Value Added 617
- 19.4 Ratio Analysis 619
 - Decomposition of ROE 619
 - Turnover and Other Asset Utilization Ratios 622
 - Liquidity Ratios 624
 - Market Price Ratios: Growth versus Value 625
 - Choosing a Benchmark 627
- 19.5 An Illustration of Financial Statement Analysis 628
- 19.6 Comparability Problems 631
 - Inventory Valuation 631
 - Depreciation 631
 - Inflation and Interest Expense 632
 - Fair Value Accounting 633
 - Quality of Earnings and Accounting Practices 633
 - International Accounting Conventions 635
- 19.7 Value Investing: The Graham Technique 637
- End of Chapter Material 637

PART VI**OPTIONS, FUTURES, AND OTHER DERIVATIVES****CHAPTER 20****Options Markets: Introduction 651**

- 20.1 The Option Contract 651
 - Options Trading 653
 - American and European Options 655
 - Adjustments in Option Contract Terms 655
 - Options Clearing 656
 - Other Listed Options 657
 - 20.2 Values of Options at Expiration 659
 - Call Options 659
 - Put Options 659
 - Option versus Stock Investments 660
 - 20.3 Option Strategies 662
 - Protective Put 662
 - Covered Calls 664
 - Straddle 665
 - Spreads 667
 - Collars 669
 - 20.4 The Put–Call Parity Relationship 669
 - 20.5 Option-Like Securities 672
 - Callable Bonds 672
 - Convertible Securities 673
 - Warrants 675
 - Collateralized Loans 676
 - Levered Equity and Risky Debt 677
 - 20.6 Financial Engineering 678

PREFACE

After three decades of rapid and profound change in the investments industry, in addition to a financial crisis of historic magnitude, the Ninth Canadian Edition of *Investments* takes a hard look at the here and now. The vast expansion of financial markets during this tumultuous period, due in part to innovations in securitization and credit enhancement, gave way to new trading strategies. And these strategies were, in turn, made feasible by developments in communication and information technology, as well as by advances in the theory of investments.

Yet the financial crisis persisted and was rooted in the cracks of these developments. Many of the innovations in security design facilitated high leverage and an exaggerated notion of the efficacy of risk transfer strategies. This complacency about risk, coupled with the relaxation of regulation and reduced transparency, masked the precarious condition of many big players in the system. In turn and out of necessity, our text has evolved along with financial markets and their influence on world events.

The Ninth Canadian Edition of *Investments* is intended primarily as a textbook for courses in investment analysis. Our guiding principle has been and continues to be to present the material in a framework that is organized by a central core of consistent fundamental principles. We strip away unnecessary mathematical and technical details, and concentrate on providing the intuition that may guide students and practitioners as they confront new ideas and challenges in their professional and personal lives.

This text introduces and explores many issues. It provides the skills to conduct a sophisticated assessment of watershed current issues and debates covered by the popular media and more-specialized finance journals. Whether you plan to become an investment professional yourself or an individual investor, these skills are essential, especially in today's rapidly evolving environment.

Our primary goal is to present material of practical value. And for our author team, there is no contradiction in the field of investments between the pursuit of truth and the pursuit of money. Quite the opposite, actually. The capital asset pricing model, the arbitrage pricing model, the efficient markets hypothesis, the option-pricing model, and the other centrepieces of modern financial research are as much intellectually satisfying subjects of scientific inquiry as they are of immense practical importance for the sophisticated investor.

In our effort to link theory to practice, we have made our approach consistent with that of the CFA Institute. In addition to fostering research in finance, the CFA Institute administers an education and certification program for candidates seeking designation as Chartered Financial Analysts (CFAs). The CFA curriculum is the product of consensus from a committee of distinguished scholars and practitioners regarding the core knowledge required by the investment professional.

Many features of this text make it consistent with and relevant to the CFA curriculum. Questions from past CFA exams appear at the end of nearly every chapter, and for students who will be taking the exam, those same questions are listed at the end of the book. Chapter 3 includes excerpts from the "Code of Ethics and Standards of Professional Conduct" of the CFA Institute. Chapter 28 discusses investors and the investment process and presents the CFA Institute's framework for systematically relating investor objectives and constraints to ultimate investment policy. End-of-chapter problems also include questions from test-prep leader Kaplan Schweser in select chapters.

In the Ninth Canadian Edition, we have continued our systematic collection of Excel spreadsheets that give tools to explore concepts more deeply than was previously possible. These spreadsheets, available on Connect, provide a taste of the sophisticated analytic tools available to professional investors.

Underlying Philosophy

In the Ninth Canadian Edition, we address many of the changes in the investment environment, including the unprecedented events surrounding the financial crisis.

While the financial environment is constantly evolving, many basic *principles* remain important. We believe that fundamental principles should organize and motivate all study and that attention to these few central ideas can simplify the study of otherwise difficult material. These principles are crucial to understanding the securities traded in financial markets and in understanding new securities that will be introduced in the future, as well as their effects on global markets. For this reason, we have made this book thematic, meaning we never offer rules of thumb without reference to the central tenets of the modern approach to finance.

The common theme unifying this book is that *security markets are nearly efficient*, meaning most securities are usually priced appropriately given their risk and return attributes. Free lunches are rarely found in markets as competitive as the financial market. This simple observation is, nevertheless, remarkably powerful in its implications for the design of investment strategies; as a result, our discussions of strategy are always guided by the implications of the efficient markets hypothesis. While the degree of market efficiency is, and always will be, a matter of debate (in fact we devote a full chapter to the behavioural challenge to the efficient market hypothesis), we hope our discussions throughout the book convey a good dose of healthy criticism concerning much conventional wisdom.

Distinctive Themes

The Ninth Canadian Edition of *Investments* is organized around several important themes:

1. The central theme is the **near informational efficiency of well-developed security markets**, such as those in Canada, and the general awareness that competitive markets do not offer “free lunches” to participants. A second theme is the **risk–return trade-off**. This, too, is a no-free-lunch notion, holding that in competitive security markets, higher expected returns come only at a price: the need to bear greater investment risk. However, this notion leaves several questions unanswered. How should we measure the risk of an asset? What should be the quantitative trade-off between risk (properly measured) and expected return? The approach we present to these issues is known as *modern portfolio theory*, which is another organizing principle of this book. Modern portfolio theory focuses on the techniques and implications of *efficient diversification*, and we devote considerable attention to the effect of diversification on portfolio risk as well as the implications of efficient diversification for the proper measurement of risk and the risk–return relationship.
2. This text places greater emphasis on **asset allocation** than most of its competitors. We prefer this emphasis for two important reasons. First, it corresponds to the procedure that most individuals actually follow. Typically, you start with all of your money in a bank account, only then considering how much to invest in something riskier that might offer a higher expected return. The logical step at this point is to consider risky asset classes, such as stocks, bonds, or real estate. This is an asset allocation decision. Second, in most cases, the asset allocation choice is far more important in determining overall investment performance than is the set of security selection decisions. Asset allocation is the primary determinant of the risk–return profile of the investment portfolio, and so it deserves primary attention in a study of investment policy.
3. This text offers a **much broader and deeper treatment of futures, options, and other derivative security markets** than most investments texts. These markets have become both crucial and integral to the financial universe. Your only choice is to become conversant in these markets—whether you are to be a finance professional or simply a sophisticated individual investor.

New in the Ninth Canadian Edition

The following is a guide to changes in the Ninth Canadian Edition. This is not an exhaustive road map, but instead is meant to provide an overview of substantial additions and changes to coverage from the last edition of the text.

Chapter 1 The Investment Environment This chapter contains updated coverage of the consequences of the financial crisis as well as the U.S. Dodd–Frank Act. The Canadian experience of the financial crisis is also discussed.

Chapter 2 Financial Markets, Asset Classes, and Financial Instruments We devote additional attention to money markets, including recent controversies concerning the regulation of money market mutual funds as well as the LIBOR scandal, and the Asset Backed Commercial Paper crisis in Canada. We also discuss the new benchmark money market rate, CDOR which has replaced the Canadian LIBOR.

Chapter 3 How Securities Are Traded We have extensively rewritten this chapter and included new sections that detail the rise of electronic markets, algorithmic and high-speed trading, and changes in market structure. We also provide an update on the latest regulatory developments concerning short-selling and market circuit breakers. In addition, we introduce a new innovation for financing small startup companies that considerably lightens the regulatory burden of firms: equity crowdfunding

Chapter 5 Risk, Return, and the Historical Record This chapter has been updated with considerable attention paid to evidence on tail risk and extreme stock returns.

Chapter 8 Index Models We illustrate the implementation of the index model by constructing an optimal portfolio from the S&P/TSX Index using a set of stocks traded on the TSX.

Chapter 9 The Capital Asset Pricing Model We have streamlined the explanation of the simple CAPM and updated and integrated the sections dealing with extensions of the CAPM, tying together extra-market hedging demands and factor risk premiums.

Chapter 10 Arbitrage Pricing Theory and the Multifactor Models of Risk and Return The chapter contains new material on the practical feasibility of creating well-diversified portfolios and the implications for asset pricing.

Chapter 11 The Efficient Market Hypothesis We have added new material documenting the behaviour of market anomalies over time, suggesting how market inefficiencies seem to be corrected.

Chapter 13 Empirical Evidence on Security Returns Increased attention is given to tests of multifactor models of risk and return and the implications of these tests for the importance of extra-market hedging demands.

Chapter 14 Bond Prices and Yields This chapter includes new material on sovereign credit default swaps.

Chapter 16 Managing Bond Portfolios This chapter now includes information on liability driven investing for pension plans, a strategy that has gained importance since the financial crisis of 2008/2009.

Chapter 18 Equity Valuation Models This chapter includes a new section on the practical problems entailed in using DCF security valuation models and the response of value investors to these problems.

Chapter 19 Financial Statement Analysis We have added a new introduction to the discussion of ratio analysis, providing greater structure and rationale concerning the use of financial ratios as tools to evaluate firm performance.

Chapter 21 Option Valuation We have added substantial new sections on risk-neutral valuation methods and their implementation in the binomial option-pricing model, as well as the implications of the option pricing model for tail risk and financial instability.

Chapter 23 Futures Markets We look at the evolution of trading platforms for Canadian commodities to the closure of the Winnipeg Exchange and beyond.

Chapter 24 Portfolio Performance Evaluation New sections on the vulnerability of standard performance measures to manipulation, manipulation-free measures, and the Morningstar Risk-Adjusted Return have been added.

Organization and Content

The text is composed of seven sections that are fairly independent and may be studied in a variety of sequences. Because there is enough material in the book for a two-semester course, clearly a one-semester course will require the instructor to decide which parts to include.

Part I is introductory and contains important institutional material focusing on the financial environment. We discuss the major players in the financial markets, provide an overview of the types of securities traded in those markets, and explain how and where securities are traded. We also discuss in depth mutual funds and other investment companies, which have become an increasingly important means of investing for individual investors. Perhaps most important, we address how financial markets can influence all aspects of the global economy, as in 2008.

The material presented in Part One should make it possible for instructors to assign term projects early in the course. These projects might require the student to analyze in detail a particular group of securities. Many instructors like to involve their students in some sort of investment game, and the material in these chapters will facilitate this process.

Parts II and III contain the core of modern portfolio theory. Chapter 5 is a general discussion of risk and return, making the general point that historical returns on broad asset classes are consistent with a risk–return trade-off, and examining the distribution of stock returns. We focus more closely in Chapter 6 on how to describe investors’ risk preferences and how they bear on asset allocation. In the next two chapters, we turn to portfolio optimization (Chapter 7) and its implementation using index models (Chapter 8).

After our treatment of modern portfolio theory in Part II, we investigate in Part III the implications of that theory for the equilibrium structure of expected rates of return on risky assets. Chapter 9 treats the capital asset pricing model and Chapter 10 covers multifactor descriptions of risk and the arbitrage pricing theory. Chapter 11 covers the efficient market hypothesis, including its rationale as well as evidence that supports the hypothesis and challenges it. Chapter 12 is devoted to the behavioural critique of market rationality. Finally, we conclude Part III with Chapter 13 on empirical evidence on security pricing. This chapter contains evidence concerning the risk–return relationship, as well as liquidity effects on asset pricing.

Part IV is the first of three parts on security valuation. This part treats fixed-income securities—bond pricing (Chapter 14), term structure relationships (Chapter 15), and interest-rate risk management (Chapter 16).

Parts V and VI deal with equity securities and derivative securities. For a course emphasizing security analysis and excluding portfolio theory, it is possible to proceed directly from Part I to Part IV with no loss in continuity.

Finally, **Part VII** considers several topics important for portfolio managers, including performance evaluation, international diversification, active management, and practical issues in the process of portfolio management. This part also contains a chapter on hedge funds.

A GUIDED TOUR

The Ninth Canadian Edition of *Investments* has several features designed to make it easy for students to understand, absorb, and apply the concepts and techniques presented.

Chapter Openers

Chapter Openers outline the upcoming material in the chapter and provide students with a road map of what they will learn.

CHAPTER FOUR

Mutual Funds and Other Investment Companies

THE PREVIOUS CHAPTER introduced you to the mechanics of trading securities and the structure of the markets in which securities trade. Commonly, however, individual investors do not trade securities directly for their own accounts. Instead, they direct their funds to investment companies that purchase securities on their behalf. The most important of these financial intermediaries are open-end investment companies, more commonly known as mutual funds, to which we devote most of this chapter. We also touch briefly on other types of funds, such as closed-end funds, hedge funds, and exchange-traded funds.

We begin the chapter by describing and comparing the various types of investment companies available to investors. We then examine the functions of mutual funds, their investment styles and

CONCEPT CHECK 4.2

The Equity Fund sells two classes of shares. Class A shares have a front-end load of 4% and a management expense ratio (MER) equal to 2%. Class B shares have an MER of 2.5% as well as back-end load fees that start at 5% and fall by 1% for each full year the investor holds the portfolio (until the fifth year). Assume the rate of return on the fund portfolio before management and operating expenses is 12% annually. What will be the value of a \$10,000 investment in Class A and Class B shares if the shares are sold after (a) 1 year, (b) 4 years, (c) 10 years? Which fee structure provides higher net proceeds at the end of each investment horizon?

Concept Checks

These self-test questions and problems found in the body of the text enable the students to determine whether they've understood the preceding material. Detailed solutions are provided at the end of each chapter.

Numbered Examples

These numbered and titled examples are integrated throughout chapters. Using the worked-out solutions to these examples as models, students can learn how to solve specific problems step-by-step as well as gain insight into general principles by seeing how they are applied to answer concrete questions.

Example 4.1 Net Asset Value

Consider a mutual fund that manages a portfolio of securities worth \$120 million. Suppose the fund owes \$4 million to its investment advisers and owes another \$1 million for rent, wages due, and miscellaneous expenses. The fund has 5 million shares outstanding.

$$\text{Net asset value} = \frac{\$120 \text{ million} - \$5 \text{ million}}{5 \text{ million shares}} = \$23 \text{ per share}$$

WORDS FROM THE STREET

The Flash Crash of May 2010

At 2:42 New York time on May 6, 2010, the Dow Jones Industrial Average was already down about 300 points for the day. The market was demonstrating concerns about the European debt crisis, and nerves were already on edge. Then, in the next 5 minutes, the Dow dropped an additional 600 points. And only 20 minutes after that, it had recovered most of those 600 points. Besides the staggering intraday volatility of the broad market, trading in individual shares and ETFs was even more disrupted. The iShares Russell 1000 Value fund temporarily fell from \$59 a share to 8 cents. Shares in the large consulting company Accenture, which had just sold for \$38, traded at 1 cent only a minute or two later. At the other extreme, share prices of Apple and Hewlett-Packard momentarily increased to over \$100,000. These markets were clearly broken.

The causes of the flash crash are still debated. An SEC report issued after the trade points to a \$4 billion sale of market index futures contracts by a mutual fund. As market prices began to tumble, many algorithmic trading programs withdrew from the markets, and those that remained became net sellers, further pushing down equity prices. As more and more of these algorithmic traders shut down, illiquidity in these markets evaporated: buyers for many stocks simply disappeared.

Finally, trading was halted for a short period. When it resumed, buyers decided to take advantage of many severely depressed stock prices, and the market rebounded almost as quickly as it had crashed. Given the intraday turbulence and the clearly distorted prices at which some trades had been executed, the NYSE and NASDAQ decided to cancel all trades that were executed more than 60% away from a "reference price" close to the opening price of the day. Almost 70% of those cancelled trades involved ETFs.

The SEC has since approved experimentation with new circuit breakers to halt trading for 5 minutes in large stocks that rise or fall by more than 10% in a 5-minute period. The idea is to prevent trading algorithms from moving share prices quickly before human traders have a chance to determine whether those prices are moving in response to fundamental information.

The flash crash highlighted the fragility of markets in the face of huge variation in trading volume created by algorithmic traders. The potential for these high-frequency traders to withdraw from markets in periods of turbulence remains a concern, and many observers are not convinced that we are protected from future flash crashes.

Words from the Street Boxes

These short feature articles from business periodicals are included in boxes throughout the text. The articles are chosen for real-world relevance and clarity of presentation.

eExcel APPLICATIONS: Buying on Margin

The following Excel spreadsheet, available in Connect or through your course instructor, makes it easy to analyze the impacts of different margin levels and the volatility of stock prices. It also allows you to compare return on investment for a margin trade with a trade using no borrowed funds.

	A	B	C	D	E	F	G	H

22	Return on Investment	-41.60%	B20/B21						

Excel Questions

- Suppose you buy 100 shares of stock initially selling for \$50, borrowing 25% of the necessary funds from your broker (i.e., the initial margin on your purchase is 25%). You pay an interest rate of 8% on margin loans.
 - How much of your own money do you invest? How much do you borrow from your broker?
 - What will be your rate of return for the following stock prices at the end of a 1-year holding period? (i) \$40; (ii) \$50; (iii) \$60.
- Repeat Question 1 assuming your initial margin was 50%. How does margin affect the risk and return of your position.

Excel Applications

The Ninth Canadian Edition features Excel Spreadsheet Applications with new Excel questions. A sample spreadsheet is presented in the text with additional templates and solutions available on our Connect site.

Excel Exhibits

Selected exhibits are set as Excel spreadsheets and are denoted by an icon. They are also available on our Connect site.

Scenario analysis of holding period return of the stock-index fund

END-OF-CHAPTER FEATURES

Summary

At the end of each chapter, a detailed summary outlines the most important concepts presented.

22 PART ONE Introduction

SUMMARY

- Real assets create wealth. Financial assets represent claims to parts or all of that wealth. Financial assets determine how the ownership of real assets is distributed among investors.
- Financial assets can be categorized as fixed income, equity, or derivative instruments. Top-down portfolio construction techniques start with the asset allocation decision—the allocation of funds across broad asset classes—and then progress to more specific security-selection decisions.
- Competition in financial markets leads to a risk-return trade-off, in which securities that offer higher expected rates of return also impose greater risks on investors. The presence of risk, however, implies that actual returns can differ considerably from the returns expected at the beginning of the investment period. Competition among security analysts also promotes financial markets that are nearly informationally efficient, meaning that prices reflect all available information concerning the value of the security. Passive investment strategies may make sense in nearly efficient markets.
- Investment banking brings efficiency to corporate fundraising. Investment bankers develop expertise in pricing new issues and in marketing them to investors. By the end of 2008, all the major stand-alone U.S. investment banks had been absorbed into commercial banks or had reorganized themselves into bank-holding companies. In Canada and Europe, large banks maintained both commercial and investment banking divisions.
- The financial crisis of 2008 showed the importance of systemic risk. Systemic risk can be limited by transparency that allows traders and investors to assess the risk of their counterparties, capital requirements to prevent trading participants from being brought down by potential losses, frequent settlement of gains or losses to prevent losses from accumulating beyond an institution's ability to bear them, incentives to discourage excessive risk taking, and accurate and unbiased analysis.

Problem Sets

We strongly believe that practice in solving problems is essential to understanding investments, so a good variety of problems is provided.

PROBLEM SETS

- What are some comparative advantages of investing in
 - Open-end mutual funds
 - Individual stocks and bonds that you choose for yourself
- Open-end equity mutual funds find it necessary to keep a significant percentage of total investments, typically around 5% of the portfolio, in very liquid money market assets. Closed-end funds do not have to maintain such a position in cash-equivalent securities. What difference between open-end and closed-end funds might account for their differing policies?
- Balanced funds, life-cycle funds, and asset allocation funds all invest in both the stock and bond markets. What are the differences among these types of funds?

The fund has not borrowed any funds, but its accrued management fee with the portfolio manager currently totals \$30,000. There are 4 million shares outstanding. What is the net asset value of the fund?

9. Reconsider the Fingroup Fund in the previous problem. If, during the year, the portfolio manager sells all of the holdings of stock D and replaces them with 200,000 shares of stock E at \$50 per share and 200,000 shares of stock F at \$25 per share, what is the portfolio turnover rate?

10. The Closed Fund is a closed-end investment company with a portfolio currently worth \$200 million. It has liabilities of \$3 million and 5 million shares outstanding.

Exam Prep Questions

Practice questions for the CFA® exams provided by Kaplan Schweser, A Global Leader in CFA® Education, are available in selected chapters for additional test practice. These are easily identified by the Kaplan Schweser logos featured throughout the problem sets. Learn more at www.schweser.com.

5. Characterize each company in the previous problem as underpriced, overpriced, or properly priced.

KAPLAN
SCHWESER

6. What is the expected rate of return for a stock that has a beta of 1.0 if the expected return on the market is 15%?

- 15%
- More than 15%
- Cannot be determined without the risk-free rate

KAPLAN
SCHWESER

7. Kaskin, Inc., stock has a beta of 1.2 and Quinn, Inc., stock has a beta of .6. Which of the following statements is *most* accurate?

- The expected rate of return will be higher for the stock of Kaskin, Inc., than that of Quinn, Inc.
- The stock of Kaskin, Inc., has more total risk than the stock of Quinn, Inc.
- The stock of Quinn, Inc., has more systematic risk than that of Kaskin, Inc.

KAPLAN
SCHWESER

CFA Problems

Several questions from past CFA examinations are provided in applicable chapters. These questions represent the kinds of questions that professionals in the field believe are relevant to the “real world.” Located at the back of the book is a listing of each CFA question and the level and year of the CFA exam it was included in for easy reference when studying for the exam.

CFA®
PROBLEMS

1. Given \$100,000 to invest, what is the expected risk premium in dollars of investing in equities versus risk-free T-bills (Canadian Treasury bills) based on the following table?

Action	Probability	Expected Return
Invest in equities	0.6	\$50,000
	0.4	-\$30,000
Invest in risk-free T-bills	1.0	\$ 5,000

2. Based on the scenarios below, what is the expected return for a portfolio with the following return profile?

	Bear Market	Normal Market	Bull Market
Probability	0.2	0.3	0.5
Rate of return	-25%	10%	24%

Excel Problems

Selected chapters feature Excel problems, denoted by an icon, specifically linked to templates that are available on our Connect site.

E-Investments Boxes

These exercises provide students with simple activities to enhance their experience using the Internet. Easy-to-follow instructions and questions are presented for students to utilize what they have learned in class and apply it to today’s Web-driven world.

E-INVESTMENTS EXERCISES

- Use data from finance.yahoo.com to answer the following questions:
 - Collect the following data for 25 firms of your choosing.
 - Book-to-market ratio
 - Price-earnings ratio
 - Market capitalization (size)
 - Price-cash flow ratio (i.e., market capitalization/operating cash flow)
 - Another criterion that interests you

You can find this information by choosing a company and then clicking on Key Statistics. Rank the firms based on each of the criteria separately, and divide the firms into five groups based on their ranking for each criterion. Calculate the average rate of return for each group of firms.

MARKET-LEADING TECHNOLOGY

Learn without Limits

McGraw-Hill Connect® is an award-winning digital teaching and learning platform that gives students the means to better connect with their coursework, with their instructors, and with the important concepts that they will need to know for success now and in the future. With Connect, instructors can take advantage of McGraw-Hill's trusted content to seamlessly deliver assignments, quizzes and tests online. McGraw-Hill Connect is a learning platform that continually adapts to each student, delivering precisely what they need, when they need it, so class time is more engaging and effective. Connect makes teaching and learning personal, easy, and proven.

Connect Key Features

SmartBook®

As the first and only adaptive reading experience, SmartBook is changing the way students read and learn. SmartBook creates a personalized reading experience by highlighting the most important concepts a student needs to learn at that moment in time. As a student engages with SmartBook, the reading experience continuously adapts by highlighting content based on what each student knows and doesn't know. This ensures that he or she is focused on the content needed to close specific knowledge gaps, while it simultaneously promotes long-term learning.

Connect Insight®

Connect Insight is Connect's new one-of-a-kind visual analytics dashboard—now available for instructors—that provides at-a-glance information regarding student performance, which is immediately actionable. By presenting assignment, assessment, and topical performance results together with a time metric that is easily visible for aggregate or individual results, Connect Insight gives instructors the ability to take a just-in-time approach to teaching and learning, which was never before available. Connect Insight presents data that helps instructors improve class performance in a way that is efficient and effective.

Simple Assessment Management

With Connect, creating assignments is easier than ever, so instructors can spend more time teaching and less time managing.

- Assign SmartBook learning modules.
- Edit existing questions and create new questions.
- Draw from a variety of text specific questions, resources, and test bank material to assign online.
- Streamline lesson planning, student progress reporting, and assignment grading to make classroom management more efficient than ever.

Smart Grading

When it comes to studying, time is precious. Connect helps students learn more efficiently by providing feedback and practice material when they need it, where they need it.

- Automatically score assignments, giving students immediate feedback on their work and comparisons with correct answers.

- Access and review each response; manually change grades or leave comments for students to review.
- Track individual student performance—by question, assignment or in relation to the class overall—with detailed grade reports.
- Integrate grade reports easily with Learning Management Systems including Blackboard, D2L, and Moodle.

Mobile Access

Connect makes it easy for students to read and learn using their smartphones and tablets. With the mobile app, students can study on the go—including reading and listening using the audio functionality—without constant need for Internet access.

Instructor Library

The Connect Instructor Library is a repository for additional resources to improve student engagement in and out of the class. It provides all the crucial resources instructors need to build their course.

- Access Instructor resources.
- View assignments and resources created for past sections.
- Post resources for students to use.

Instructor Resources

- **Instructor’s Manual** Prepared by Lorne N. Switzer, John Molson School of Business, Concordia University. This manual has been revised and improved for this edition. Each chapter includes a Chapter Overview, Learning Objectives, and Presentation of Material to help instructors with classroom prep.
- **Test Bank** Prepared by Christine Panasian, Sobey School of Business, Saint Mary’s University. The Test Bank has been revised to improve the quality of questions. Each question is ranked by level of difficulty, which allows greater flexibility in creating a test and also provides a rationale for the solution.
- **PowerPoint Presentations** These presentation slides were prepared by Cagdas Tahaoglu, John Molson School of Business, Concordia University. They contain figures and tables from the text, key points, and summaries in a visually stimulating collection of slides that you can customize to fit your lecture.
- **Solutions Manual** Updated by our Canadian author team: Lorne N. Switzer, Dana Boyko, Christine Panasian, and Maureen Stapleton, and meticulously checked for technical accuracy by Cagdas Tahaoglu. This Manual provides detailed solutions to all end-of-chapter problem sets.

Superior Learning Solutions and Support

The McGraw-Hill Education team is ready to help instructors assess and integrate any of our products, technology, and services into your course for optimal teaching and learning performance. Whether it’s helping your students improve their grades, or putting your entire course online, the McGraw-Hill Education team is here to help you do it. Contact your Learning Solutions Consultant today to learn how to maximize all of McGraw-Hill Education’s resources.

For more information, please visit us online: <http://www.mheducation.ca/he/solutions>

ACKNOWLEDGEMENTS

For granting us permission to include many of their examination questions in the text, we are grateful to the CFA Institute.

Also, a sincere thanks to Cagdas Tahaoglu at the John Molson School of Business at Concordia University. Thank you for your technical check of this edition. Your expertise and feedback were invaluable.

Special thanks from Lorne Switzer to Stylianos Perrakis and Peter Ryan who brought him aboard for the previous (8th) edition of the text. Switzer would also like to thank his current and former students who have contributed to the journey of developing the Canadian literature in Investments over the years, including Diego Cueto, Sandra Dow, Nabil El-Meslemani, Haibo Fan, Derek Hirsch, Katie Kelly, Jinlin Liu, Seungho Lee, Alan Picard, Easton Sheahan-Lee, Qiao Tu, Jun Wang, Yajing Zhang, and Rana Zoghaib.

Much credit is due to the development and production teams at McGraw-Hill Education Canada. Leading the charge were Alwynn Pinard and Sara Braithwaite, Portfolio Managers. Thank you Alwynn for your vision and determination and thank you Sara for your leadership. Special thanks also go to: Tammy Mavroudi, Content Developer; Indu Arora, Permissions Editor, for doing such a thorough job securing items for this edition on our behalf. To our stellar production/editorial team—Jeanette McCurdy and Jessica Barnoski, Supervising Editors, thank you for keeping us all on track, and Judy Sturup, copy editor/proofreader, for her keen eye and attention to detail.

Sincerely,

Lorne N. Switzer

Dana Boyko

Christine A. Panasian

Maureen Stapleton

CHAPTER ONE

The Investment Environment

AN INVESTMENT IS the *current* commitment of money or other resources in the expectation of reaping *future* benefits. For example, an individual might purchase shares of stock anticipating that the future proceeds from the shares will justify both the time that her money is tied up as well as the risk of the **investment**. The time you will spend studying this text (not to mention its cost) also is an investment. You are forgoing either current leisure or the income you could be earning at a job in the expectation that your future career will be sufficiently enhanced to justify this commitment of time and effort. While these two investments differ in many ways, they share one key attribute that is central to all investments: you sacrifice something of value now, expecting to benefit from that sacrifice later.

This text can help you become an informed practitioner of investing. We will focus on investments in securities such as stocks, bonds, and options and futures contracts, but much of what we discuss will be useful in the analysis of any type of investment. The text will provide you with background in the organization of various securities markets; will survey the valuation and risk-management principles useful in particular markets, such as those for bonds or stocks; and will introduce you to the principles of portfolio construction.

Broadly speaking, this chapter addresses three topics that provide a useful perspective for the material that is to come later. First, before delving into the topic of investments, we consider the role of financial assets in the economy. We discuss the relationship between securities and the “real” assets that actually produce goods and services for consumers, and we consider why financial assets are important to the functioning of a developed economy.

Given this background, we then take a first look at the types of decisions that confront investors as they assemble a portfolio of assets. These investment decisions are made in an environment where higher returns usually can be obtained only at the price of greater risk and in which it is rare to find assets that are so mispriced as to be obvious bargains. These themes—the risk–return trade-off and the efficient pricing of financial assets—are central to the investment process, so it is worth pausing for a brief discussion of their implications as we begin the text. These implications will be fleshed out in much greater detail in later chapters.

We provide an overview of the organization of security markets as well as the various players who participate in those markets. Together, these introductions should give you a feel for who the major participants are in the securities markets as well as the setting in which they act. Finally, we discuss the financial crisis that began playing out in 2007 and peaked in 2008. The crisis dramatically illustrated the connections between the financial system and the “real” side of the economy. We look at the origins of the crisis and the lessons that may be drawn about systemic risk. We close the chapter with an overview of the remainder of the text.

LEARNING OBJECTIVES

- LO1** Real Assets versus Financial Assets
- LO2** Financial Assets
- LO3** Financial Markets and the Economy

- LO4 The Investment Process
 - LO5 Markets Are Competitive
 - LO6 The Players
 - LO7 The Financial Crisis of 2008
 - LO8 Outline of the Text
-

LO1 Real Assets versus Financial Assets

The material wealth of a society is ultimately determined by the productive capacity of its economy, that is, the goods and services its members can create. This capacity is a function of the **real assets** of the economy: the land, buildings, machines, and knowledge that can be used to produce goods and services.

In contrast to real assets are **financial assets** such as stocks and bonds. Such securities are no more than sheets of paper or, more likely, computer entries, and they do not contribute directly to the productive capacity of the economy. Instead, these assets are the means by which individuals in well-developed economies hold their claims on real assets. Financial assets are claims to the income generated by real assets (or claims on income from the government). If we cannot own our own auto plant (a real asset), we can still buy shares in Ford or Toyota (financial assets) and thereby share in the income derived from the production of automobiles.

While real assets generate net income to the economy, financial assets simply define the allocation of income or wealth among investors. Individuals can choose between consuming their wealth today or investing for the future. If they choose to invest, they may place their wealth in financial assets by purchasing various securities. When investors buy these securities from companies, the firms use the money so raised to pay for real assets, such as plant, equipment, technology, or inventory. So investors' returns on securities ultimately come from the income produced by the real assets that were financed by the issuance of those securities.

Real and financial assets are distinguished operationally by the balance sheets of individuals and firms in the economy. Whereas real assets appear only on the asset side of the balance sheet, financial assets always appear on both sides of balance sheets. Your financial claim on a firm is an asset, but the firm's issuance of that claim is the firm's liability. When we aggregate over all balance sheets, financial assets will cancel out, leaving only the sum of real assets as the net wealth of the aggregate economy.

Another way of distinguishing between financial and real assets is to note that financial assets are created and destroyed in the ordinary course of doing business. For example, when a loan is paid off, both the creditor's claim (a financial asset) and the debtor's obligation (a financial liability) cease to exist. In contrast, real assets are destroyed only by accident or by wearing out over time.

A way to concretize the distinction between real and financial assets is to examine the Canadian Balance Sheet Accounts for households, as prepared by Statistics Canada.¹ For example, from these accounts for the second quarter of 2018, Statistics Canada data

¹ The National Balance Sheet for Canadian Households can be obtained from the Statistics Canada website: <https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=3610058001&pickMembers%5B0%5D=2.4&pickMembers%5B1%5D=3.1>.

show that about 47% of Canadian household wealth consists of non-financial assets. The largest category of non-financial assets consists of residential structures (which accounts for about 37% of non-financial assets). The next largest category of non-financial assets consists of consumer durables (which represents about 11% of non-financial assets). Equity and investment fund shares are the largest category of Canadian household financial wealth (39%) followed by life insurance and pensions (38%) and bank deposits (about 20%). Not surprisingly, mortgage loans to households account for about 65% of Canadian household financial liabilities (or borrowings). Consumer credit is the second largest category of financial liabilities (representing about 29% of Canadian household borrowing).

CONCEPT CHECK 1.1

Are the following assets real or financial?

- a. Patents
- b. Lease obligations
- c. Customer goodwill
- d. A university education
- e. A \$5 bill

We will focus almost exclusively on financial assets. But you shouldn't lose sight of the fact that the successes or failures of the financial assets we choose to purchase ultimately depend on the performance of the underlying real assets.

LO2 Financial Assets

It is common to distinguish among three broad types of financial assets: fixed income, equity, and derivatives. **Fixed-income securities** or **debt securities** promise either a fixed stream of income or a stream of income determined by a specified formula. For example, a corporate bond typically would promise that the bondholder will receive a fixed amount of interest each year. Other so-called floating-rate bonds promise payments that depend on current interest rates. For example, a bond may pay an interest rate that is fixed at 2 percentage points above the rate paid on Treasury bills. Unless the borrower is declared bankrupt, the payments on these securities are either fixed or determined by formula. For this reason, the investment performance of debt securities typically is least closely tied to the financial condition of the issuer.

Nevertheless, fixed-income securities come in a tremendous variety of maturities and payment provisions. At one extreme, the *money market* refers to debt securities that are short term, highly marketable, and generally of very low risk. Examples of money market securities are Treasury bills, Bankers' Acceptances, and commercial paper. In contrast, the fixed-income *capital market* includes long-term securities such as Government of Canada bonds, as well as bonds issued by federal agencies, provinces, municipalities, and corporations. These bonds range from very safe in terms of default risk (e.g., securities issued by the federal government) to relatively risky (e.g., high-yield or "junk" bonds). They also are designed with extremely diverse provisions regarding payments provided to the investor and protection against the bankruptcy of the issuer. We will take a first look at these securities in Chapter 2 and undertake a more detailed analysis of the debt market in Part IV.

Unlike debt securities, common stock, or **equity**, in a firm represents an ownership share in the corporation. Equity holders are not promised any particular payment. They receive any dividends the firm may pay and have pro-rated ownership in the real assets

of the firm. If the firm is successful, the value of equity will increase; if not, it will decrease. The performance of equity investments, therefore, is tied directly to the success of the firm and its real assets. For this reason, equity investments tend to be riskier than investments in debt securities. Equity markets and equity valuation are the topics of Part V.

Finally, **derivative securities**, such as options and futures contracts, provide payoffs that are determined by the prices of *other* assets, such as bond or stock prices. For example, a call option on a share of Suncor Energy stock might turn out to be worthless if Suncor's share price remains below a threshold or *exercise* price, such as \$40 a share, but it can be quite valuable if the stock price rises above that level.² Other important derivative securities are futures and swap contracts. We will examine these in Part VI.

Derivatives have become an integral part of the investment environment. One use of derivatives, perhaps the primary use, is to hedge risks or transfer them to other parties. This is done successfully every day, and the use of these securities for risk management is so commonplace that the multi-trillion-dollar market in derivative assets is routinely taken for granted. Derivatives also can be used to take highly speculative positions, however. Every so often, one of these positions blows up, resulting in well-publicized losses of hundreds of millions of dollars. While these losses attract considerable attention, they are, in fact, the exception to the more common use of such securities as risk-management tools. Derivatives will continue to play an important role in portfolio construction and the financial system. We will return to this topic later in the text.

Investors and corporations regularly encounter other financial markets, as well. Firms engaged in international trade often transfer money back and forth between dollars and other currencies. In London alone, nearly \$2 trillion U.S. dollars of currency is traded each day.

Investors also might invest directly in some real assets. For example, dozens of commodities are traded on exchanges such as the Montréal Exchange, the New York Mercantile Exchange, or the Chicago Board of Trade. You can buy or sell corn, wheat, natural gas, gold, silver, and so on.

Commodity and derivative markets allow firms to adjust their exposure to various business risks. For example, a construction firm may lock in the price of copper by buying copper futures contracts, thus eliminating the risk of a sudden jump in the price of its raw materials. Wherever there is uncertainty, investors may be interested in trading, either to speculate or to lay off their risks, and a market may arise to meet that demand.

LO3 Financial Markets and the Economy

We stated earlier that real assets determine the wealth of an economy, while financial assets merely represent claims on real assets. Nevertheless, financial assets and the markets in which they trade play several crucial roles in developed economies. Financial assets allow us to make the most of the economy's real assets.

The Informational Role of Financial Markets

Stock prices reflect investors' collective assessment of a firm's current performance and future prospects. When the market is more optimistic about the firm, its share price will rise. That higher price makes it easier for the firm to raise capital and

² A call option is the right to buy a share of stock at a given exercise price on or before the option's expiration date. If the market price of Suncor Energy remains below \$40 a share, the right to buy for \$40 will turn out to be valueless. If the share price rises above \$40 before the option expires, however, the option can be exercised to obtain the share for only \$40.
