# About the Author

Jordi Cabre

N. Gregory Mankiw is the Robert M. Beren Professor of Economics at Harvard University. As a student, he studied economics at Princeton University and MIT. As a teacher, he has taught macroeconomics, microeconomics, statistics, and principles of economics. He even spent one summer long ago as a sailing instructor on Long Beach Island.

Professor Mankiw is a prolific writer and a regular participant in academic and policy debates. His work has been published in scholarly journals, such as the *American Economic Review*, *Journal of Political Economy*, and *Quarterly Journal of Economics*, and in more popular forums, such as the *New York Times* and *The Wall Street Journal*. He is also author of the best-selling intermediate-level textbook *Macroeconomics* (Worth Publishers). In addition to his teaching, research, and writing, Professor Mankiw has been a research associate of the National Bureau of Economic Research, an adviser to the Congressional Budget Office and the Federal Reserve Banks of Boston and New York, and a member of the ETS test development committee for the Advanced Placement exam in economics. From 2003 to 2005, he served as chairman of the President's Council of Economic Advisers.

Professor Mankiw lives in Wellesley, Massachusetts, with his wife Deborah, three children, Catherine, Nicholas, and Peter, and their border terrier, Tobin.

# Brief Contents

## Part I Introduction 1

---

- 1 Ten Principles of Economics 3
- 2 Thinking Like an Economist 19
- 3 Interdependence and the Gains from Trade 47

## Part II How Markets Work 63

---

- 4 The Market Forces of Supply and Demand 65
- 5 Elasticity and Its Application 89
- 6 Supply, Demand, and Government Policies 111

## Part III Markets and Welfare 133

---

- 7 Consumers, Producers, and the Efficiency of Markets 135
- 8 Application: The Costs of Taxation 155
- 9 Application: International Trade 171

## Part IV The Economics of the Public Sector 193

---

- 10 Externalities 195
- 11 Public Goods and Common Resources 215

## Part V Firm Behavior and the Organization of Industry 233

---

- 12 The Costs of Production 235
- 13 Firms in Competitive Markets 255
- 14 Monopoly 275

## Part VI The Data of Macroeconomics 305

---

- 15 Measuring a Nation's Income 307
- 16 Measuring the Cost of Living 329

## Part VII The Real Economy in the Long Run 345

---

- 17 Production and Growth 347
- 18 Saving, Investment, and the Financial System 371
- 19 The Basic Tools of Finance 393
- 20 Unemployment 409

## Part VIII Money and Prices in the Long Run 431

---

- 21 The Monetary System 433
- 22 Money Growth and Inflation 457

## Part IX Short-Run Economic Fluctuations 481

---

- 23 Aggregate Demand and Aggregate Supply 483
- 24 The Influence of Monetary and Fiscal Policy on Aggregate Demand 521

# Preface to the Student

**E**conomics is a study of mankind in the ordinary business of life." So wrote Alfred Marshall, the great 19th-century economist, in his textbook, *Principles of Economics*. Although we have learned much about the economy since Marshall's time, this definition of economics is as true today as it was in 1890, when the first edition of his text was published.

Why should you, as a student at the beginning of the 21st century, embark on the study of economics? There are three reasons.

The first reason to study economics is that it will help you understand the world in which you live. There are many questions about the economy that might spark your curiosity. Why are apartments so hard to find in New York City? Why do airlines charge less for a round-trip ticket if the traveler stays over a Saturday night? Why is Leonardo DiCaprio paid so much to star in movies? Why are living standards so meager in many African countries? Why do some countries have high rates of inflation while others have stable prices? Why are jobs easy to find in some years and hard to find in others? These are just a few of the questions that a course in economics will help you answer.

The second reason to study economics is that it will make you a more astute participant in the economy. As you go about your life, you make many economic decisions. While you are a student, you decide how many years to stay in school. Once you take a job, you decide how much of your income to spend, how much to save, and how to invest your savings. Someday you may find yourself running a small business or a large corporation, and you will decide what prices to charge for your products. The insights developed in the coming chapters will give you a new perspective on how best to make these decisions. Studying economics will not by itself make you rich, but it will give you some tools that may help in that endeavor.

The third reason to study economics is that it will give you a better understanding of both the potential and the limits of economic policy. Economic questions are always on the minds of policymakers in mayors' offices, governors' mansions, and the White House. What are the burdens associated with alternative forms of taxation? What are the effects of free trade with other countries? What is the best way to protect the environment? How does a government budget deficit affect the economy? As a voter, you help choose the policies that guide the allocation of society's resources. An understanding of economics will help you carry out that responsibility. And who knows: Perhaps someday you will end up as one of those policymakers yourself.

Thus, the principles of economics can be applied in many of life's situations. Whether the future finds you reading the newspaper, running a business, or sitting in the Oval Office, you will be glad that you studied economics.

N. Gregory Mankiw

# Acknowledgments

In writing this book, I benefited from the input of many talented people. Indeed, the list of people who have contributed to this project is so long, and their contributions so valuable, that it seems an injustice that only a single name appears on the cover.

Let me begin with my colleagues in the economics profession. The seven editions of this text and its supplemental materials have benefited enormously from their input. In reviews and surveys, they have offered suggestions, identified challenges, and shared ideas from their own classroom experience. I am indebted to them for the perspectives they have brought to the text. Unfortunately, the list has become too long to thank those who contributed to previous editions, even though students reading the current edition are still benefiting from their insights.

Most important in this process have been Ron Cronovich (Carthage College) and David Hakes (University of Northern Iowa). Ron and David, both dedicated teachers, have served as reliable sounding boards for ideas and hardworking partners with me in putting together the superb package of supplements.

The following reviewers of the sixth edition provided suggestions for refining the content, organization, and approach in the seventh.

The team of editors who worked on this book improved it tremendously. Jane Tufts, developmental editor, provided truly spectacular editing—as she always does. Mike Worls, economics product director, did a splendid job of overseeing the many people involved in such a large project. Jennifer Thomas, product development manager; Clara Goosman, content developer; and Elizabeth Beiting-Lipps, associate content developer, were crucial in assembling an extensive and thoughtful group of reviewers to give me feedback on the previous edition while putting together an excellent team to revise the supplements. Colleen Farmer, senior content project manager, and Katy Gabel, project manager, had the patience and dedication necessary to turn my manuscript into this book. Michelle Kunkler, senior art director, gave this book its clean, friendly look. Greg LaFever, the illustrator, helped make the book more visually appealing and the economics in it less abstract. Pamela Rockwell, copyeditor, refined my prose, and PreMediaGlobal prepared a careful and thorough index. John Carey, senior market development manager, and Robin LeFevre, senior brand manager, worked long hours getting the word out to potential users of this book. The rest of the Cengage team was also consistently professional, enthusiastic, and dedicated.

I am grateful also to Lisa Mogilanski and Alex Sareyan, two star Harvard undergraduates, who helped me refine the manuscript and check the page proofs for this edition.

As always, I must thank my “in-house” editor, Deborah Mankiw. As the first reader of most things I write, she continued to offer just the right mix of criticism and encouragement.

Finally, I would like to mention my three children, Catherine, Nicholas, and Peter. Their contribution to this book was putting up with a father spending too many hours in his study. The four of us have much in common—not least of which is our love of ice cream (which becomes apparent in Chapter 4). I am grateful to Nicholas in particular for helping me check the page proofs for this edition. In case you didn’t notice, Nick, it was just my way of tricking you into learning a bit of economics.

N. Gregory Mankiw

## Part I Introduction 1

### CHAPTER 1 Ten Principles of Economics 3

**1-1 How People Make Decisions 4**  
1-1a Principle 1: People Face Trade-offs 4  
1-1b Principle 2: The Cost of Something Is What You Give Up to Get It 5  
1-1c Principle 3: Rational People Think at the Margin 6  
1-1d Principle 4: People Respond to Incentives 7  
**Case Study:** The Incentive Effects of Gasoline Prices 8

**1-2 How People Interact 9**  
1-2a Principle 5: Trade Can Make Everyone Better Off 9  
1-2b Principle 6: Markets Are Usually a Good Way to Organize Economic Activity 10  
1-2c Principle 7: Governments Can Sometimes Improve Market Outcomes 11  
**FYI:** Adam Smith and the Invisible Hand 11

**1-3 How the Economy as a Whole Works 13**  
1-3a Principle 8: A Country's Standard of Living Depends on Its Ability to Produce Goods and Services 13

1-3b Principle 9: Prices Rise When the Government Prints Too Much Money 13  
**In The News:** Why You Should Study Economics 14  
1-3c Principle 10: Society Faces a Short-Run Trade-off between Inflation and Unemployment 15

**1-4 Conclusion 16**  
**Summary 16**  
**Key Concepts 17**  
**Questions for Review 17**  
**Quick Check Multiple Choice 17**  
**Problems and Applications 18**

## CHAPTER 2

### Thinking Like an Economist 19

**2-1 The Economist as Scientist 20**  
2-1a The Scientific Method: Observation, Theory, and More Observation 20  
2-1b The Role of Assumptions 21  
2-1c Economic Models 22  
2-1d Our First Model: The Circular-Flow Diagram 22  
2-1e Our Second Model: The Production Possibilities Frontier 24  
2-1f Microeconomics and Macroeconomics 27

**2-2 The Economist as Policy Adviser 27**  
2-2a Positive versus Normative Analysis 28  
2-2b Economists in Washington 28  
2-2c Why Economists' Advice Is Not Always Followed 29

**2-3 Why Economists Disagree 30**  
2-3a Differences in Scientific Judgments 30  
2-3b Differences in Values 31  
2-3c Perception versus Reality 31  
**In The News:** Actual Economists and Virtual Realities 33

## CHAPTER 3

### Interdependence and the Gains from Trade 47

#### 3-1 A Parable for the Modern Economy 48

- 3-1a Production Possibilities 48
- 3-1b Specialization and Trade 50

#### 3-2 Comparative Advantage: The Driving Force of Specialization 52

- 3-2a Absolute Advantage 52
- 3-2b Opportunity Cost and Comparative Advantage 52
- 3-2c Comparative Advantage and Trade 53
- 3-2d The Price of the Trade 54

**FYI:** The Legacy of Adam Smith and David Ricardo 55

#### 3-3 Applications of Comparative Advantage 55

- 3-3a Should Tom Brady Mow His Own Lawn? 55
- In The News:** Economics within a Marriage 56
- 3-3b Should the United States Trade with Other Countries? 57

#### 3-4 Conclusion 58

##### Summary 59

##### Key Concepts 59

##### Questions for Review 59

##### Quick Check Multiple Choice 59

##### Problems and Applications 60

## Part II How Markets Work 63

## CHAPTER 4

### The Market Forces of Supply and Demand 65

#### 4-1 Markets and Competition 66

- 4-1a What Is a Market? 66
- 4-1b What Is Competition? 66

#### 4-2 Demand 67

- 4-2a The Demand Curve: The Relationship between Price and Quantity Demanded 67
- 4-2b Market Demand versus Individual Demand 68
- 4-2c Shifts in the Demand Curve 69

**Case Study:** Two Ways to Reduce the Quantity of Smoking Demanded 71

#### 4-3 Supply 73

- 4-3a The Supply Curve: The Relationship between Price and Quantity Supplied 73
- 4-3b Market Supply versus Individual Supply 74
- 4-3c Shifts in the Supply Curve 75

#### 4-4 Supply and Demand Together 77

- 4-4a Equilibrium 77
- 4-4b Three Steps to Analyzing Changes in Equilibrium 79

#### 4-5 Conclusion: How Prices Allocate Resources 83

**In The News:** Price Increases after Disasters 84

#### Summary 84

#### Key Concepts 86

#### Questions for Review 86

#### Quick Check Multiple Choice 86

#### Problems and Applications 87

## CHAPTER 5

### Elasticity and Its Application 89

#### 5-1 The Elasticity of Demand 90

- 5-1a The Price Elasticity of Demand and Its Determinants 90
- 5-1b Computing the Price Elasticity of Demand 91
- 5-1c The Midpoint Method: A Better Way to Calculate Percentage Changes and Elasticities 91
- 5-1d The Variety of Demand Curves 92
- 5-1e Total Revenue and the Price Elasticity of Demand 94
- FYI:** A Few Elasticities from the Real World 94
- 5-1f Elasticity and Total Revenue along a Linear Demand Curve 96
- 5-1g Other Demand Elasticities 97

#### 5-2 The Elasticity of Supply 98

- 5-2a The Price Elasticity of Supply and Its Determinants 98
- 5-2b Computing the Price Elasticity of Supply 99
- 5-2c The Variety of Supply Curves 99

#### 5-3 Three Applications of Supply, Demand, and Elasticity 101

- 5-3a Can Good News for Farming Be Bad News for Farmers? 102
- 5-3b Why Did OPEC Fail to Keep the Price of Oil High? 104
- 5-3c Does Drug Interdiction Increase or Decrease Drug-Related Crime? 105

#### 5-4 Conclusion 107

#### Summary 107

#### Key Concepts 108

#### Questions for Review 108

#### Quick Check Multiple Choice 108

#### Problems and Applications 109

## CHAPTER 6

### Supply, Demand, and Government Policies 111

#### 6-1 Controls on Prices 112

6-1a How Price Ceilings Affect Market Outcomes 112

**Case Study:** Lines at the Gas Pump 114

**Case Study:** Rent Control in the Short Run and the Long Run 115

6-1b How Price Floors Affect Market Outcomes 116

**Case Study:** The Minimum Wage 117

6-1c Evaluating Price Controls 119

**In The News:** Venezuela versus the Market 120

#### 6-2 Taxes 121

6-2a How Taxes on Sellers Affect Market Outcomes 122

6-2b How Taxes on Buyers Affect Market Outcomes 123

**Case Study:** Can Congress Distribute the Burden of a Payroll Tax? 125

6-2c Elasticity and Tax Incidence 126

**Case Study:** Who Pays the Luxury Tax? 128

#### 6-3 Conclusion 128

Summary 129

Key Concepts 129

Questions for Review 129

Quick Check Multiple Choice 129

Problems and Applications 130

## Part III Markets and Welfare 133

## CHAPTER 7

### Consumers, Producers, and the Efficiency of Markets 135

#### 7-1 Consumer Surplus 136

7-1a Willingness to Pay 136

7-1b Using the Demand Curve to Measure Consumer Surplus 137

7-1c How a Lower Price Raises Consumer Surplus 138

7-1d What Does Consumer Surplus Measure? 139

#### 7-2 Producer Surplus 141

7-2a Cost and the Willingness to Sell 141

7-2b Using the Supply Curve to Measure Producer Surplus 142

7-2c How a Higher Price Raises Producer Surplus 143

#### 7-3 Market Efficiency 144

7-3a The Benevolent Social Planner 145

7-3b Evaluating the Market Equilibrium 146

**In The News:** The Invisible Hand Can Park Your Car 148

**Case Study:** Should There Be a Market in Organs? 148

#### 7-4 Conclusion: Market Efficiency and Market Failure 150

Summary 151

Key Concepts 151

Questions for Review 151

Quick Check Multiple Choice 151

Problems and Applications 152

## CHAPTER 8

### Application: The Costs of Taxation 155

#### 8-1 The Deadweight Loss of Taxation 156

8-1a How a Tax Affects Market Participants 157

8-1b Deadweight Losses and the Gains from Trade 159

#### 8-2 The Determinants of the Deadweight Loss 160

**Case Study:** The Deadweight Loss Debate 162

#### 8-3 Deadweight Loss and Tax Revenue as Taxes Vary 163

**Case Study:** The Laffer Curve and Supply-Side Economics 164

**In The News:** The Tax Debate 166

#### 8-4 Conclusion 168

Summary 168

Key Concept 168

Quick Check Multiple Choice 169

Problems and Applications 169

## CHAPTER 9

### Application: International Trade 171

#### 9-1 The Determinants of Trade 172

9-1a The Equilibrium without Trade 172

9-1b The World Price and Comparative Advantage 173

#### 9-2 The Winners and Losers from Trade 174

9-2a The Gains and Losses of an Exporting Country 174

9-2b The Gains and Losses of an Importing Country 175

9-2c The Effects of a Tariff 177

**FYI:** Import Quotas: Another Way to Restrict Trade 179

9-2d The Lessons for Trade Policy 179

9-2e Other Benefits of International Trade 180

**In The News:** Threats to Free Trade 181

**9-3 The Arguments for Restricting Trade 182**  
**In The News:** Should the Winners from Free Trade Compensate the Losers? 183  
 9-3a The Jobs Argument 183  
 9-3b The National-Security Argument 184  
**In The News:** Second Thoughts about Free Trade 184  
 9-3c The Infant-Industry Argument 185  
 9-3d The Unfair-Competition Argument 186  
 9-3e The Protection-as-a-Bargaining-Chip Argument 186  
**Case Study:** Trade Agreements and the World Trade Organization 187

**9-4 Conclusion 188**

## Part IV The Economics of the Public Sector 193

### CHAPTER 10

#### Externalities 195

**10-1 Externalities and Market Inefficiency 197**  
 10-1a Welfare Economics: A Recap 197  
 10-1b Negative Externalities 198  
 10-1c Positive Externalities 199  
**In The News:** The Externalities of Country Living 200

**Case Study:** Technology Spillovers, Industrial Policy, and Patent Protection 201

**10-2 Public Policies toward Externalities 202**  
 10-2a Command-and-Control Policies: Regulation 202  
 10-2b Market-Based Policy 1: Corrective Taxes and Subsidies 203  
**Case Study:** Why Is Gasoline Taxed So Heavily? 204  
 10-2c Market-Based Policy 2: Tradable Pollution Permits 205  
 10-2d Objections to the Economic Analysis of Pollution 207  
**In The News:** What Should We Do about Climate Change? 208

**10-3 Private Solutions to Externalities 208**  
 10-3a The Types of Private Solutions 208  
 10-3b The Coase Theorem 209  
 10-3c Why Private Solutions Do Not Always Work 211

**10-4 Conclusion 211**  
 Summary 212  
 Key Concepts 212  
 Questions for Review 212  
 Quick Check Multiple Choice 213  
 Problems and Applications 213

### CHAPTER 11

#### Public Goods and Common Resources 215

**11-1 The Different Kinds of Goods 216**  
**11-2 Public Goods 218**  
 11-2a The Free-Rider Problem 218  
 11-2b Some Important Public Goods 218  
**Case Study:** Are Lighthouses Public Goods? 221  
 11-2c The Difficult Job of Cost-Benefit Analysis 221  
**Case Study:** How Much Is a Life Worth? 222

**11-3 Common Resources 223**  
 11-3a The Tragedy of the Commons 223  
**In The News:** The Case for Toll Roads 224  
 11-3b Some Important Common Resources 225  
**Case Study:** Why the Cow Is Not Extinct 227

**11-4 Conclusion: The Importance of Property Rights 228**  
 Summary 228  
 Key Concepts 229  
 Questions for Review 229  
 Quick Check Multiple Choice 229

## Part V Firm Behavior and the Organization of Industry 233

### CHAPTER 12

#### The Costs of Production 235

##### 12-1 What Are Costs? 236

- 12-1a Total Revenue, Total Cost, and Profit 236
- 12-1b Costs as Opportunity Costs 236
- 12-1c The Cost of Capital as an Opportunity Cost 237
- 12-1d Economic Profit versus Accounting Profit 238

##### 12-2 Production and Costs 239

- 12-2a The Production Function 239
- 12-2b From the Production Function to the Total-Cost Curve 241

##### 12-3 The Various Measures of Cost 241

- 12-3a Fixed and Variable Costs 242
- 12-3b Average and Marginal Cost 243
- 12-3c Cost Curves and Their Shapes 244
- 12-3d Typical Cost Curves 246

##### 12-4 Costs in the Short Run and in the Long Run 247

- 12-4a The Relationship between Short-Run and Long-Run Average Total Cost 247
- 12-4b Economies and Diseconomies of Scale 248
- FYI:** Lessons from a Pin Factory 249

##### 12-5 Conclusion 250

##### Summary 250

##### Key Concepts 251

##### Questions for Review 251

##### Quick Check Multiple Choice 251

##### Problems and Applications 252

### CHAPTER 13

#### Firms in Competitive Markets 255

##### 13-1 What Is a Competitive Market? 256

- 13-1a The Meaning of Competition 256
- 13-1b The Revenue of a Competitive Firm 256

##### 13-2 Profit Maximization and the Competitive Firm's Supply Curve 258

- 13-2a A Simple Example of Profit Maximization 258
- 13-2b The Marginal-Cost Curve and the Firm's Supply Decision 259
- 13-2c The Firm's Short-Run Decision to Shut Down 261
- 13-2d Spilt Milk and Other Sunk Costs 262
- Case Study:** Near-Empty Restaurants and Off-Season Miniature Golf 263
- 13-2e The Firm's Long-Run Decision to Exit or Enter a Market 264
- 13-2f Measuring Profit in Our Graph for the Competitive Firm 264

##### 13-3 The Supply Curve in a Competitive Market 265

- 13-3a The Short Run: Market Supply with a Fixed Number of Firms 266
- 13-3b The Long Run: Market Supply with Entry and Exit 266
- 13-3c Why Do Competitive Firms Stay in Business If They Make Zero Profit? 268
- 13-3d A Shift in Demand in the Short Run and Long Run 269
- 13-3e Why the Long-Run Supply Curve Might Slope Upward 269

##### 13-4 Conclusion: Behind the Supply Curve 271

##### Summary 272

##### Key Concepts 272

##### Questions for Review 272

##### Quick Check Multiple Choice 272

##### Problems and Applications 273

### CHAPTER 14

#### Monopoly 275

##### 14-1 Why Monopolies Arise 276

- 14-1a Monopoly Resources 277
- 14-1b Government-Created Monopolies 277
- 14-1c Natural Monopolies 278

##### 14-2 How Monopolies Make Production and Pricing Decisions 279

- 14-2a Monopoly versus Competition 279
- 14-2b A Monopoly's Revenue 280
- 14-2c Profit Maximization 282
- 14-2d A Monopoly's Profit 284
- FYI:** Why a Monopoly Does Not Have a Supply Curve 284
- Case Study:** Monopoly Drugs versus Generic Drugs 285

**14-3 The Welfare Cost of Monopolies 286**

- 14-3a The Deadweight Loss 287
- 14-3b The Monopoly's Profit: A Social Cost? 289

**14-4 Price Discrimination 290**

- 14-4a A Parable about Pricing 290
- 14-4b The Moral of the Story 291
- 14-4c The Analytics of Price Discrimination 291
- 14-4d Examples of Price Discrimination 293
- In The News:** Price Discrimination in Higher Education 294

**14-5 Public Policy toward Monopolies 295**

- 14-5a Increasing Competition with Antitrust Laws 295
- 14-5b Regulation 295
- 14-5c Public Ownership 297
- 14-5d Doing Nothing 297

**14-6 Conclusion: The Prevalence of Monopolies 298**

Summary 299

## CHAPTER 20

### Unemployment 409

#### 20-1 Identifying Unemployment 410

20-1a How Is Unemployment Measured? 410

**Case Study:** Labor-Force Participation of Men and Women in the U.S. Economy 413

20-1b Does the Unemployment Rate Measure What We Want It To? 414

20-1c How Long Are the Unemployed without Work? 416

20-1d Why Are There Always Some People Unemployed? 416

**FYI:** The Jobs Number 417

#### 20-2 Job Search 417

20-2a Why Some Frictional Unemployment Is Inevitable 418

20-2b Public Policy and Job Search 418

20-2c Unemployment Insurance 419

**In The News:** Why Has Employment Declined? 420

#### 20-3 Minimum-Wage Laws 420

#### 20-4 Unions and Collective Bargaining 422

**FYI:** Who Earns the Minimum Wage? 423

20-4a The Economics of Unions 423

20-4b Are Unions Good or Bad for the Economy? 424

#### 20-5 The Theory of Efficiency Wages 425

20-5a Worker Health 425

20-5b Worker Turnover 426

20-5c Worker Quality 426

20-5d Worker Effort 427

**Case Study:** Henry Ford and the Very Generous \$5-a-Day Wage 427

#### 20-6 Conclusion 428

## Part VIII Money and Prices in the Long Run 431

### CHAPTER 21

#### The Monetary System 433

##### 21-1 The Meaning of Money 434

21-1a The Functions of Money 435

21-1b The Kinds of Money 435

**In The News:** Why Gold? 436

21-1c Money in the U.S. Economy 437

**FYI:** Why Credit Cards Aren't Money 438

**Case Study:** Where Is All the Currency? 439

##### 21-2 The Federal Reserve System 439

21-2a The Fed's Organization 439

21-2b The Federal Open Market Committee 440

##### 21-3 Banks and the Money Supply 441

21-3a The Simple Case of 100-Percent-Reserve Banking 441

21-3b Money Creation with Fractional-Reserve Banking 442

21-3c The Money Multiplier 443

21-3d Bank Capital, Leverage, and the Financial Crisis of 2008–2009 444

##### 21-4 The Fed's Tools of Monetary Control 446

21-4a How the Fed Influences the Quantity of Reserves 446

21-4b How the Fed Influences the Reserve Ratio 447

21-4c Problems in Controlling the Money Supply 448

**Case Study:** Bank Runs and the Money Supply 449

**In The News:** Bernanke on the Fed's Toolbox 450

21-4d The Federal Funds Rate 452

##### 21-5 Conclusion 453

Summary 453

Key Concepts 453

### CHAPTER 22

#### Money Growth and Inflation 457

##### 22-1 The Classical Theory of Inflation 458

22-1a The Level of Prices and the Value of Money 459

22-1b Money Supply, Money Demand, and Monetary Equilibrium 459

22-1c The Effects of a Monetary Injection 461

22-1d A Brief Look at the Adjustment Process 462

22-1e The Classical Dichotomy and Monetary Neutrality 463

22-1f Velocity and the Quantity Equation 464

**Case Study:** Money and Prices during Four Hyperinflations 466

22-1g The Inflation Tax 466

22-1h The Fisher Effect 468

**FYI:** Hyperinflation in Zimbabwe 468

**22-2 The Costs of Inflation 470**

- 22-2a A Fall in Purchasing Power? The Inflation Fallacy 471
  - 22-2b Shoeleather Costs 471
  - 22-2c Menu Costs 472
  - 22-2d Relative-Price Variability and the Misallocation of Resources 472
  - 22-2e Inflation-Induced Tax Distortions 473
  - 22-2f Confusion and Inconvenience 474
  - 22-2g A Special Cost of Unexpected Inflation: Arbitrary Redistributions of Wealth 475
  - 22-2h Inflation Is Bad, But Deflation May Be Worse 476
- Case Study:** *The Wizard of Oz* and the Free-Silver Debate 476

**22-3 Conclusion 478**

- Summary 478**
- Key Concepts 478**
- Questions for Review 479**
- Quick Check Multiple Choice 479**
- Problems and Applications 479**

# Part IX Short-Run Economic Fluctuations 481

## CHAPTER 23

### Aggregate Demand and Aggregate Supply 483

**23-1 Three Key Facts about Economic Fluctuations 484**

- 23-1a Fact 1: Economic Fluctuations Are Irregular and Unpredictable 484
- 23-1b Fact 2: Most Macroeconomic Quantities Fluctuate Together 486
- 23-1c Fact 3: As Output Falls, Unemployment Rises 486

**23-2 Explaining Short-Run Economic Fluctuations 486**

# Introduction

## CHAPTER 1

# Ten Principles of Economics

**T**he word *economy* comes from the Greek word *oikonomos*, which means “one who manages a household.” At first, this origin might seem peculiar. But in fact, households and economies have much in common.

A household faces many decisions. It must decide which household members do which tasks and what each member receives in return: Who cooks dinner? Who does the laundry? Who gets the extra dessert at dinner? Who gets to drive the car? In short, a household must allocate its scarce resources (time, dessert, car mileage) among its various members, taking into account each member’s abilities, efforts, and desires.

Like a household, a society faces many decisions. It must find some way to decide what jobs will be done and who will do them. It needs some people to grow food, other people to make clothing, and still others to design computer software. Once society has allocated people (as well as land, buildings, and machines) to various jobs, it must also allocate the goods and services

they produce. It must decide who will eat caviar and who will eat potatoes. It must decide who will drive a Ferrari and who will take the bus.

The management of society's resources is important because resources are scarce. **Scarcity** means that society has limited resources and therefore cannot produce all the goods and services people wish to have. Just as each member of a household cannot get everything she wants, each individual in a society cannot attain the highest standard of living to which she might aspire.

### scarcity

*the limited nature of society's resources*

### economics

*the study of how society manages its scarce resources*

**Economics** is the study of how society manages its scarce resources. In most societies, resources are allocated not by an all-powerful dictator but through the combined choices of millions of households and firms. Economists, therefore, study how people make decisions: how much they work, what they buy, how much they save, and how they invest their savings. Economists also study how people interact with one another. For instance, they examine how the multitude of buyers and sellers of a good together determine the price at which the good is sold and the quantity that is sold. Finally, economists analyze forces and trends that affect the economy as a whole, including the growth in average income, the fraction of the population that cannot find work, and the rate at which prices are rising.

The study of economics has many facets, but it is unified by several central ideas. In this chapter, we look at *Ten Principles of Economics*. Don't worry if you don't understand them all at first or if you aren't completely convinced. We explore these ideas more fully in later chapters. The ten principles are introduced here to give you an overview of what economics is all about. Consider this chapter a "preview of coming attractions."

## 1-1 How People Make Decisions

There is no mystery to what an economy is. Whether we are talking about the economy of Los Angeles, the United States, or the whole world, an economy is just a group of people dealing with one another as they go about their lives. Because the behavior of an economy reflects the behavior of the individuals who make up the economy, we begin our study of economics with four principles about individual decision making.

### 1-1a Principle 1: People Face Trade-offs

You may have heard the old saying, "There ain't no such thing as a free lunch." Grammar aside, there is much truth to this adage. To get something that we like, we usually have to give up something else that we also like. Making decisions requires trading off one goal against another.

Consider a student who must decide how to allocate her most valuable resource—her time. She can spend all of her time studying economics, spend all of it studying psychology, or divide it between the two fields. For every hour she studies one subject, she gives up an hour she could have used studying the other. And for every hour she spends studying, she gives up an hour that she could have spent napping, bike riding, watching TV, or working at her part-time job for some extra spending money.

Or consider parents deciding how to spend their family income. They can buy food, clothing, or a family vacation. Or they can save some of the family income for retirement or for children's college education. When they choose to spend an extra dollar on one of these goods, they have one less dollar to spend on some other good.

When people are grouped into societies, they face different kinds of trade-offs. One classic trade-off is between “guns and butter.” The more a society spends on national defense (guns) to protect its shores from foreign aggressors, the less it can spend on consumer goods (butter) to raise the standard of living at home. Also important in modern society is the trade-off between a clean environment and a high level of income. Laws that require firms to reduce pollution raise the cost of producing goods and services. Because of these higher costs, the firms end up earning smaller profits, paying lower wages, charging higher prices, or some combination of these three. Thus, while pollution regulations yield the benefit of a cleaner environment and the improved health that comes with it, the regulations come at the cost of reducing the incomes of the regulated firms’ owners, workers, and customers.

Another trade-off society faces is between efficiency and equality. **Efficiency** means that society is getting the maximum benefits from its scarce resources. **Equality** means that those benefits are distributed uniformly among society’s members. In other words, efficiency refers to the size of the economic pie, and equality refers to how the pie is divided into individual slices.

When government policies are designed, these two goals often conflict. Consider, for instance, policies aimed at equalizing the distribution of economic well-being. Some of these policies, such as the welfare system or unemployment insurance, try to help the members of society who are most in need. Others, such as the individual income tax, ask the financially successful to contribute more than others to support the government. Though they achieve greater equality, these policies reduce efficiency. When the government redistributes income from the rich to the poor, it reduces the reward for working hard; as a result, people work less and produce fewer goods and services. In other words, when the government tries to cut the economic pie into more equal slices, the pie gets smaller.

Recognizing that people face trade-offs does not by itself tell us what decisions they will or should make. A student should not abandon the study of psychology just because doing so would increase the time available for the study of economics. Society should not stop protecting the environment just because environmental regulations reduce our material standard of living. The poor should not be ignored just because helping them distorts work incentives. Nonetheless, people are likely to make good decisions only if they understand the options that are available to them. Our study of economics, therefore, starts by acknowledging life’s trade-offs.

### 1-1b Principle 2: The Cost of Something Is What You Give Up to Get It

Because people face trade-offs, making decisions requires comparing the costs and benefits of alternative courses of action. In many cases, however, the cost of an action is not as obvious as it might first appear.

Consider the decision to go to college. The main benefits are intellectual enrichment and a lifetime of better job opportunities. But what are the costs? To answer this question, you might be tempted to add up the money you spend on tuition, books, room, and board. Yet this total does not truly represent what you give up to spend a year in college.

There are two problems with this calculation. First, it includes some things that are not really costs of going to college. Even if you quit school, you need a place to sleep and food to eat. Room and board are costs of going to college only to the extent that they are more expensive at college than elsewhere. Second, this

#### efficiency

*the property of society getting the most it can from its scarce resources*

#### equality

*the property of distributing economic prosperity uniformly among the members of society*

calculation ignores the largest cost of going to college—your time. When you spend a year listening to lectures, reading textbooks, and writing papers, you cannot spend that time working at a job. For most students, the earnings they give up to attend school are the single largest cost of their education.

**opportunity cost**  
whatever must be given up to obtain some item

The **opportunity cost** of an item is what you give up to get that item. When making any decision, decision makers should be aware of the opportunity costs that accompany each possible action. In fact, they usually are. College athletes who can earn millions if they drop out of school and play professional sports are well aware that the opportunity cost of their attending college is very high. It is not surprising that they often decide that the benefit of a college education is not worth the cost.

### 1-1c Principle 3: Rational People Think at the Margin

**rational people**  
people who systematically and purposefully do the best they can to achieve their objectives

Economists normally assume that people are rational. **Rational people** systematically and purposefully do the best they can to achieve their objectives, given the available opportunities. As you study economics, you will encounter firms that decide how many workers to hire and how much of their product to manufacture and sell to maximize profits. You will also encounter individuals who decide how much time to spend working and what goods and services to buy with the resulting income to achieve the highest possible level of satisfaction.

Rational people know that decisions in life are rarely black and white but usually involve shades of gray. At dinnertime, the question you face is not “Should I fast or eat like a pig?” More likely, you will be asking yourself “Should I take that extra spoonful of mashed potatoes?” When exams roll around, your decision is not between blowing them off and studying twenty-four hours a day but whether to spend an extra hour reviewing your notes instead of watching TV. Economists use the term **marginal change** to describe a small incremental adjustment to an existing plan of action. Keep in mind that *margin* means “edge,” so marginal changes are adjustments around the edges of what you are doing. Rational people often make decisions by comparing *marginal benefits* and *marginal costs*.

**marginal change**  
a small incremental adjustment to a plan of action

For example, suppose you are considering calling a friend on your cell phone. You decide that talking with her for 10 minutes would give you a benefit that you value at about \$7. Your cell phone service costs you \$40 per month plus \$0.50 per minute for whatever calls you make. You usually talk for 100 minutes a month, so your total monthly bill is \$90 (\$0.50 per minute times 100 minutes, plus the \$40 fixed fee). Under these circumstances, should you make the call? You might be tempted to reason as follows: “Because I pay \$90 for 100 minutes of calling each month, the average minute on the phone costs me \$0.90. So a 10-minute call costs \$9. Because that \$9 cost is greater than the \$7 benefit, I am going to skip the call.” That conclusion is wrong, however. Although the *average* cost of a 10-minute call is \$9, the *marginal* cost—the amount your bill increases if you make the extra call—is only \$5. You will make the right decision only by comparing the marginal benefit and the marginal cost. Because the marginal benefit of \$7 is greater than the marginal cost of \$5, you should make the call. This is a principle that people innately understand: Cell phone users with unlimited minutes (that is, minutes that are free at the margin) are often prone to make long and frivolous calls.

Thinking at the margin works for business decisions as well. Consider an airline deciding how much to charge passengers who fly standby. Suppose that flying a 200-seat plane across the United States costs the airline \$100,000. In this case, the average cost of each seat is \$100,000/200, which is \$500. One might be tempted

to conclude that the airline should never sell a ticket for less than \$500. But a rational airline can increase its profits by thinking at the margin. Imagine that a plane is about to take off with 10 empty seats and a standby passenger waiting at the gate is willing to pay \$300 for a seat. Should the airline sell the ticket? Of course, it should. If the plane has empty seats, the cost of adding one more passenger is tiny. The *average* cost of flying a passenger is \$500, but the *marginal* cost is merely the cost of the bag of peanuts and can of soda that the extra passenger will consume. As long as the standby passenger pays more than the marginal cost, selling the ticket is profitable.

Marginal decision making can help explain some otherwise puzzling economic phenomena. Here is a classic question: Why is water so cheap, while diamonds are so expensive? Humans need water to survive, while diamonds are unnecessary; but for some reason, people are willing to pay much more for a diamond than for a cup of water. The reason is that a person's willingness to pay for a good is based on the marginal benefit that an extra unit of the good would yield. The marginal benefit, in turn, depends on how many units a person already has. Water is essential, but the marginal benefit of an extra cup is small because water is plentiful. By contrast, no one needs diamonds to survive, but because diamonds are so rare, people consider the marginal benefit of an extra diamond to be large.

A rational decision maker takes an action if and only if the marginal benefit of the action exceeds the marginal cost. This principle explains why people use their cell phones as much as they do, why airlines are willing to sell tickets below average cost, and why people are willing to pay more for diamonds than for water. It can take some time to get used to the logic of marginal thinking, but the study of economics will give you ample opportunity to practice.

### 1-1d Principle 4: People Respond to Incentives

An **incentive** is something (such as a prospect of a punishment or reward) that induces a person to act. Because rational people make decisions by comparing costs and benefits, they respond to incentives. You will see that incentives play a central role in the study of economics. One economist went so far as to suggest that the entire field could be summarized as simply "People respond to incentives. The rest is commentary."

Incentives are crucial to analyzing how markets work. For example, when the price of an apple rises, people decide to eat fewer apples. At the same time, apple orchards decide to hire more workers and harvest more apples. In other words, a higher price in a market provides an incentive for buyers to consume less and an incentive for sellers to produce more. As we will see, the influence of prices on the behavior of consumers and producers is crucial for how a market economy allocates scarce resources.

Public policymakers should never forget about incentives: Many policies change the costs or benefits that people face and, as a result, alter their behavior. A tax on gasoline, for instance, encourages people to drive smaller, more fuel-efficient cars. That is one reason people drive smaller cars in Europe, where gasoline taxes are high, than in the United States, where gasoline taxes are low. A higher gasoline tax also encourages people to carpool, take public transportation, and live closer to where they work. If the tax were larger, more people would be driving hybrid cars, and if it were large enough, they would switch to electric cars.

When policymakers fail to consider how their policies affect incentives, they often end up with unintended consequences. For example, consider public policy regarding auto safety. Today, all cars have seat belts, but this was not true fifty

*"Is the marginal benefit of this call greater than the marginal cost?"*

#### **incentive**

*something that induces a person to act*

years ago. In the 1960s, Ralph Nader's book *Unsafe at Any Speed* generated much public concern over auto safety. Congress responded with laws requiring seat belts as standard equipment on new cars.

How does a seat belt law affect auto safety? The direct effect is obvious: When a person wears a seat belt, the probability of surviving an auto accident rises. But that's not the end of the story because the law also affects behavior by altering incentives. The relevant behavior here is the speed and care with which drivers operate their cars. Driving slowly and carefully is costly because it uses the driver's time and energy. When deciding how safely to drive, rational people compare, perhaps unconsciously, the marginal benefit from safer driving to the marginal cost. As a result, they drive more slowly and carefully when the benefit of increased safety is high. For example, when road conditions are icy, people drive more attentively and at lower speeds than they do when road conditions are clear.

Consider how a seat belt law alters a driver's cost-benefit calculation. Seat belts make accidents less costly because they reduce the likelihood of injury or death. In other words, seat belts reduce the benefits of slow and careful driving. People respond to seat belts as they would to an improvement in road conditions—by driving faster and less carefully. The result of a seat belt law, therefore, is a larger number of accidents. The decline in safe driving has a clear, adverse impact on pedestrians, who are more likely to find themselves in an accident but (unlike the drivers) don't have the benefit of added protection.

At first, this discussion of incentives and seat belts might seem like idle speculation. Yet in a classic 1975 study, economist Sam Peltzman argued that auto-safety laws have had many of these effects. According to Peltzman's evidence, these laws produce both fewer deaths per accident and more accidents. He concluded that the net result is little change in the number of driver deaths and an increase in the number of pedestrian deaths.

Peltzman's analysis of auto safety is an offbeat and controversial example of the general principle that people respond to incentives. When analyzing any policy, we must consider not only the direct effects but also the less obvious indirect effects that work through incentives. If the policy changes incentives, it will cause people to alter their behavior.

### case study

#### The Incentive Effects of Gasoline Prices

From 2005 to 2008 the price of oil in world oil markets skyrocketed, the result of limited supplies together with surging demand from robust world growth, especially in China. The price of gasoline in the United States rose from about \$2 to about \$4 a gallon. At the time, the news was filled with stories about how people responded to the increased incentive to conserve—sometimes in obvious ways, sometimes in less obvious ways.

Here is a sampling of various stories:

- “As Gas Prices Soar, Buyers Are Flocking to Small Cars”
- “As Gas Prices Climb, So Do Scooter Sales”
- “Gas Prices Knock Bicycles Sales, Repairs into Higher Gear”
- “Gas Prices Send Surge of Riders to Mass Transit”
- “Camel Demand Up as Oil Price Soars”: Farmers in the Indian state of Rajasthan are rediscovering the humble camel. As the cost of running gas-guzzling tractors soars, even-toed ungulates are making a comeback.
- “The Airlines Are Suffering, but the Order Books of Boeing and Airbus Are Bulging”: Demand for new, more fuel-efficient aircraft has never been greater.

The latest versions of the Airbus A320 and Boeing 737, the single-aisle workhorses for which demand is strongest, are up to 40 percent cheaper to run than the vintage planes some American airlines still use.

- “Home Buying Practices Adjust to High Gas Prices”: In his hunt for a new home, Demetrius Stroud crunched the numbers to find out that, with gas prices climbing, moving near an Amtrak station is the best thing for his wallet.
- “Gas Prices Drive Students to Online Courses”: For Christy LaBadie, a sophomore at Northampton Community College, the 30-minute drive from her home to the Bethlehem, Pa., campus has become a financial hardship now that gasoline prices have soared to more than \$4 a gallon. So this semester she decided to take an online course to save herself the trip—and the money.
- “Diddy Halts Private Jet Flights Over Fuel Prices”: Fuel prices have grounded an unexpected frequent-flyer: Sean “Diddy” Combs. . . . The hip-hop mogul said he is now flying on commercial airlines instead of in private jets, which Combs said had previously cost him \$200,000 and up for a roundtrip between New York and Los Angeles. “I’m actually flying commercial,” Diddy said before walking onto an airplane, sitting in a first-class seat and flashing his boarding pass to the camera. “That’s how high gas prices are.”

Many of these developments proved transitory. The economic downturn that began in 2008 and continued into 2009 reduced the world demand for oil, and the price of gasoline declined substantially. No word yet on whether Mr. Combs has returned to his private jet. ▲

**Quick Quiz** Describe an important trade-off you recently faced. • Give an example of some action that has both a monetary and nonmonetary opportunity cost. • Describe an incentive your parents offered to you in an effort to influence your behavior.

## 1-2 How People Interact

The first four principles discussed how individuals make decisions. As we go about our lives, many of our decisions affect not only ourselves but other people as well. The next three principles concern how people interact with one another.

### 1-2a Principle 5: Trade Can Make Everyone Better Off

You may have heard on the news that the Chinese are our competitors in the world economy. In some ways, this is true because American and Chinese firms produce many of the same goods. Companies in the United States and China compete for the same customers in the markets for clothing, toys, solar panels, automobile tires, and many other items.

Yet it is easy to be misled when thinking about competition among countries. Trade between the United States and China is not like a sports contest in which one side wins and the other side loses. In fact, the opposite is true: Trade between two countries can make each country better off.

To see why, consider how trade affects your family. When a member of your family looks for a job, she competes against members of other families who are looking for jobs. Families also compete against one another when they go shopping because each family wants to buy the best goods at the lowest prices. In a sense, each family in an economy competes with all other families.
