# Useful Conversion Factors and Relationships

## Length

SI unit: meter (m)

$$\begin{aligned}1 \text{ km} &= 0.62137 \text{ mi} \\1 \text{ mi} &= 5280 \text{ ft} \\&= 1.6093 \text{ km} \\1 \text{ m} &= 1.0936 \text{ yd} \\1 \text{ in.} &= 2.54 \text{ cm (exactly)} \\1 \text{ cm} &= 0.39370 \text{ in.} \\1 \text{ \AA} &= 10^{-10} \text{ m}\end{aligned}$$

## Mass

SI unit: kilogram (kg)

$$\begin{aligned}1 \text{ kg} &= 2.2046 \text{ lb} \\1 \text{ lb} &= 453.59 \text{ g} \\&= 16 \text{ oz} \\1 \text{ amu} &= 1.660538921 \times 10^{-27} \text{ kg}\end{aligned}$$

## Temperature

SI unit: Kelvin (K)

$$\begin{aligned}0 \text{ K} &= -273.15 \text{ }^\circ\text{C} \\&= -459.67 \text{ }^\circ\text{F} \\K &= \text{ }^\circ\text{C} + 273.15 \\^\circ\text{C} &= \frac{5}{9} (\text{ }^\circ\text{F} - 32^\circ) \\^\circ\text{F} &= \frac{9}{5} \text{ }^\circ\text{C} + 32^\circ\end{aligned}$$

## Energy (derived)

SI unit: Joule (J)

$$\begin{aligned}1 \text{ J} &= 1 \text{ kg}\cdot\text{m}^2/\text{s}^2 \\&= 0.2390 \text{ cal} \\&= 1\text{C}\cdot\text{V} \\1 \text{ cal} &= 4.184 \text{ J} \\1 \text{ eV} &= 1.602 \times 10^{-19} \text{ J}\end{aligned}$$

## Pressure (derived)

SI unit: Pascal (Pa)

$$\begin{aligned}1 \text{ Pa} &= 1 \text{ N}/\text{m}^2 \\&= 1 \text{ kg}/\text{m}\cdot\text{s}^2 \\1 \text{ atm} &= 1.01325 \times 10^5 \text{ Pa} \\&= 760 \text{ torr} \\&= 14.70 \text{ lb}/\text{in}^2 \\1 \text{ bar} &= 10^5 \text{ Pa} \\1 \text{ torr} &= 1 \text{ mm Hg}\end{aligned}$$

## Volume (derived)

SI unit: cubic meter (m<sup>3</sup>)

$$\begin{aligned}1 \text{ L} &= 10^{-3} \text{ m}^3 \\&= 1 \text{ dm}^3 \\&= 10^3 \text{ cm}^3 \\&= 1.0567 \text{ qt} \\1 \text{ gal} &= 4 \text{ qt} \\&= 3.7854 \text{ L} \\1 \text{ cm}^3 &= 1 \text{ mL} \\1 \text{ in}^3 &= 16.4 \text{ cm}^3\end{aligned}$$

## Color Chart for Common Elements

# List of Elements with Their Symbols and Atomic Weights

Element	Symbol	Atomic Number	Atomic Weight	Element	Symbol	Atomic Number	Atomic Weight	Element	Symbol	Atomic Number	Atomic Weight
Actinium	Ac	89	227.03a	Hafnium	Hf	72	178.49	Praseodymium	Pr	59	140.90766
Aluminum	Al	13	26.981538	Hassium	Hs	108	269.1a	Promethium	Pm	61	145a
Americium	Am	95	243.06a	Helium	He	2	4.002602a	Protactinium	Pa	91	231.03588
Antimony	Sb	51	121.760	Holmium	Ho	67	164.93033	Radium	Ra	88	226.03a
Argon	Ar	18	39.948	Hydrogen	H	1	1.00794	Radon	Rn	86	222.02a
Arsenic	As	33	74.92160	Indium	In	49	114.818	Rhenium	Re	75	186.207a
Astatine	At	85	209.99a	Iodine	I	53	126.90447	Rhodium	Rh	45	102.90550
Barium	Ba	56	137.327	Iridium	Ir	77	192.217	Roentgenium	Rg	111	282.2a
Berkelium	Bk	97	247.07a	Iron	Fe	26	55.845	Rubidium	Rb	37	85.4678
Beryllium	Be	4	9.012183	Krypton	Kr	36	83.80	Ruthenium	Ru	44	101.07
Bismuth	Bi	83	208.98038	Lanthanum	La	57	138.9055	Rutherfordium	Rf	104	267.1a
Bohrium	Bh	107	270.1a	Lawrencium	Lr	103	262.11a	Samarium	Sm	62	150.36
Boron	B	5	10.81	Lead	Pb	82	207.2	Scandium	Sc	21	44.955908
Bromine	Br	35	79.904	Lithium	Li	3	6.941	Seaborgium	Sg	106	269.1a
Cadmium	Cd	48	112.414	Livermorium	Lv	116	293 <sup>a</sup>	Selenium	Se	34	78.97
Calcium	Ca	20	40.078	Lutetium	Lu	71	174.967	Silicon	Si	14	28.0855
Californium	Cf	98	251.08a	Magnesium	Mg	12	24.3050	Silver	Ag	47	107.8682
Carbon	C	6	12.0107	Manganese	Mn	25	54.938044	Sodium	Na	11	22.989770
Cerium	Ce	58	140.116	Meltrnium	Mt	109	278.2a	Strontium	Sr	38	87.62
Cesium	Cs	55	132.905452	Mendelevium	Md	101	258.10a	Sulfur	S	16	32.065
Chlorine	Cl	17	35.453	Mercury	Hg	80	200.59	Tantalum	Ta	73	180.9479
Chromium	Cr	24	51.9961	Molybdenum	Mo	42	95.95	Technetium	Tc	43	98a
Cobalt	Co	27	58.933194	Moscovium	Mc	115	289.2a	Tellurium	Te	52	127.60
Copernicium	Cn	112	285.2 <sup>a</sup>	Neodymium	Nd	60	144.24	Tennessee	Ts	117	293.2a
Copper	Cu	29	63.546	Neon	Ne	10	20.1797	Terbium	Tb	65	158.92534
Curium	Cm	96	247.07a	Neptunium	Np	93	237.05a	Thallium	Tl	81	204.3833
Darmstadtium	Ds	110	281.2a	Nickel	Ni	28	58.6934	Thorium	Th	90	232.0377
Dubnium	Db	105	268.1a	Nihonium	Nh	113	286.2 <sup>a</sup>	Thulium	Tm	69	168.93422
Dysprosium	Dy	66	162.50	Niobium	Nb	41	92.90637	Tin	Sn	50	118.710
Einsteinium	Es	99	252.08a	Nitrogen	N	7	14.0067	Titanium	Ti	22	47.867
Erbium	Er	68	167.259	Nobelium	No	102	259.10a	Tungsten	W	74	183.84
Europium	Eu	63	151.964	Oganesson	Og	118	294.2a	Uranium	U	92	238.02891
Fermium	Fm	100	257.10a	Osmium	Os	76	190.23	Vanadium	V	23	50.9415
Flerovium	Fl	114	289.2a	Oxygen	O	8	15.9994	Xenon	Xe	54	131.293
Fluorine	F	9	18.9984016	Palladium	Pd	46	106.42	Ytterbium	Yb	70	173.04
Francium	Fr	87	223.02a	Phosphorus	P	15	30.973762	Yttrium	Y	39	88.90584
Gadolinium	Gd	64	157.25	Platinum	Pt	78	195.078	Zinc	Zn	30	65.39
Gallium	Ga	31	69.723	Plutonium	Pu	94	244.06a	Zirconium	Zr	40	91.224
Germanium	Ge	32	72.64	Polonium	Po	84	208.98a				
Gold	Au	79	196.966569	Potassium	K	19	39.0983				

<sup>a</sup>Mass of longest-lived or most important isotope.

# CONTENTS

## PREFACE 25

## 1 Introduction: Matter, Energy, and Measurement 46

- 1.1 The Study of Chemistry 48**  
The Atomic and Molecular Perspective of Chemistry 48  
Why Study Chemistry? 49
- 1.2 Classifications of Matter 51**  
States of Matter 51 Pure Substances 51  
Elements 52 Compounds 53 Mixtures 54
- 1.3 Properties of Matter 56**  
Physical and Chemical Changes 56 Separation of  
Mixtures 57
- 1.4 The Nature of Energy 59**  
Kinetic Energy and Potential Energy 59
- 1.5 Units of Measurement 61**  
SI Units 61 Length and Mass 63  
Temperature 63 Derived SI Units 64 Volume 64  
Density 65 Units of Energy 65
- 1.6 Uncertainty in Measurement 68**  
Precision and Accuracy 68 Significant Figures 69  
Significant Figures in Calculations 70
- 1.7 Dimensional Analysis 72**  
Conversion Factors 72 Using Two or More Conversion  
Factors 74 Conversions Involving Volume 75  
**Chapter Summary and Key Terms 77**  
**Learning Outcomes 78 Key Equations 78**  
**Exercises 79 Additional Exercises 83**

**Chemistry Put to Work** Chemistry and the  
Chemical Industry 50

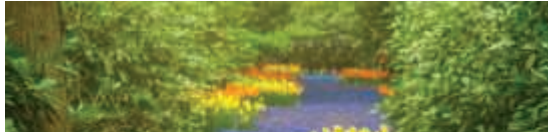

**A Closer Look** The Scientific Method 61

**Chemistry Put to Work** Chemistry in the News 67

**Strategies for Success** Estimating Answers 74

**Strategies for Success** The Importance of  
Practice 76

**Strategies for Success** The Features of This  
Book 76

## 2 Atoms, Molecules, and Ions 86

- 2.1 The Atomic Theory of Matter 88**
- 2.2 The Discovery of Atomic Structure 89**  
Cathode Rays and Electrons 89 Radioactivity 91  
The Nuclear Model of the Atom 92
- 2.3 The Modern View of Atomic Structure 93**  
Atomic Numbers, Mass Numbers, and Isotopes 95
- 2.4 Atomic Weights 97**  
The Atomic Mass Scale 97 Atomic Weight 97
- 2.5 The Periodic Table 99**
- 2.6 Molecules and Molecular Compounds 102**  
Molecules and Chemical Formulas 102 Molecular and  
Empirical Formulas 102 Picturing Molecules 103
- 2.7 Ions and Ionic Compounds 104**  
Predicting Ionic Charges 105 Ionic Compounds 106
- 2.8 Naming Inorganic Compounds 109**  
Names and Formulas of Ionic Compounds 109  
Names and Formulas of Acids 113 Names and  
Formulas of Binary Molecular Compounds 114
- 2.9 Some Simple Organic Compounds 115**  
Alkanes 115 Some Derivatives of Alkanes 116  
**Chapter Summary and Key Terms 118**  
**Learning Outcomes 118 Key Equations 119**  
**Exercises 119 Additional Exercises 124**

**A Closer Look** Basic Forces 95

**A Closer Look** The Mass Spectrometer 98

**A Closer Look** What Are Coins Made Of? 101

**Chemistry and Life** Elements Required by Living  
Organisms 108

**Strategies for Success** How to Take a Test 117

## 3 Chemical Reactions and Reaction Stoichiometry 126

### 3.1 Chemical Equations 128

Balancing Equations 128 A Step-by-Step Example of Balancing a Chemical Equation 129 Indicating the States of Reactants and Products 131

### 3.2 Simple Patterns of Chemical Reactivity 132

Combination and Decomposition Reactions 132 Combustion Reactions 134

### 3.3 Formula Weights 134

Formula and Molecular Weights 135 Percentage Composition from Chemical Formulas 136

### 3.4 Avogadro's Number and the Mole 137

Molar Mass 138 Interconverting Masses and Moles 140 Interconverting Masses and Numbers of Particles 141

### 3.5 Empirical Formulas from Analyses 142

Molecular Formulas from Empirical Formulas 144 Combustion Analysis 145

### 3.6 Quantitative Information from Balanced Equations 146

### 3.7 Limiting Reactants 150

Theoretical and Percent Yields 152

**Chapter Summary and Key Terms 154**

**Learning Outcomes 154 Key Equations 154**

**Exercises 155 Additional Exercises 161**

**Integrative Exercises 162 Design an Experiment 163**

**Strategies for Success** Problem Solving 136

**Chemistry and Life** Glucose Monitoring 140

**Strategies for Success** Design an Experiment 153

## 4 Reactions in Aqueous Solution 164

### 4.1 General Properties of Aqueous Solutions 166

Electrolytes and Nonelectrolytes 166

How Compounds Dissolve in Water 167 Strong and Weak Electrolytes 168

### 4.2 Precipitation Reactions 170

Solubility Guidelines for Ionic Compounds 170 Exchange (Metathesis) Reactions 171 Ionic Equations and Spectator Ions 173

### 4.3 Acids, Bases, and Neutralization Reactions 174

Acids 174 Bases 175 Strong and Weak Acids and Bases 176 Identifying Strong and Weak Electrolytes 176 Neutralization Reactions and Salts 178 Neutralization Reactions with Gas Formation 180

### 4.4 Oxidation-Reduction Reactions 181

Oxidation and Reduction 181 Oxidation Numbers 182 Oxidation of Metals by Acids and Salts 184 The Activity Series 185

### 4.5 Concentrations of Solutions 188

Molarity 188 Expressing the Concentration of an Electrolyte 189 Interconverting Molarity, Moles, and Volume 190 Dilution 191

### 4.6 Solution Stoichiometry and Chemical Analysis 192

Titration 194

**Chapter Summary and Key Terms 197**

**Learning Outcomes 198 Key Equations 198**

**Exercises 198 Additional Exercises 203**

**Integrative Exercises 204 Design an Experiment 205**

**Chemistry Put to Work** Antacids 180

**Strategies for Success** Analyzing Chemical Reactions 188

## 5 Thermochemistry 206

### 5.1 The Nature of Chemical Energy 208

### 5.2 The First Law of Thermodynamics 210

System and Surroundings 210 Internal Energy 211 Relating  $\Delta E$  to Heat and Work 212 Endothermic and Exothermic Processes 214 State Functions 214

### 5.3 Enthalpy 216

Pressure–Volume Work 216 Enthalpy Change 218

### 5.4 Enthalpies of Reaction 220

### 5.5 Calorimetry 222

Heat Capacity and Specific Heat 223

Constant-Pressure Calorimetry 224

Bomb Calorimetry (Constant-Volume Calorimetry) 226

- 5.6 Hess's Law** 227
- 5.7 Enthalpies of Formation** 230  
Using Enthalpies of Formation to Calculate Enthalpies of Reaction 232
- 5.8 Bond Enthalpies** 234  
Bond Enthalpies and the Enthalpies of Reactions 236
- 5.9 Foods and Fuels** 238  
Foods 238 Fuels 240 Other Energy Sources 241  
**Chapter Summary and Key Terms** 244  
**Learning Outcomes** 245 **Key Equations** 245  
**Exercises** 246 **Additional Exercises** 252  
**Integrative Exercises** 254 **Design an Experiment** 255
- 
- A Closer Look** Energy, Enthalpy, and *P-V* Work 219
- A Closer Look** Using Enthalpy as a Guide 222
- Chemistry and Life** The Regulation of Body Temperature 227
- Chemistry Put to Work** The Scientific and Political Challenges of Biofuels 242

## 6 Electronic Structure of Atoms 256

- 6.1 The Wave Nature of Light** 258
- 6.2 Quantized Energy and Photons** 260  
Hot Objects and the Quantization of Energy 260  
The Photoelectric Effect and Photons 261
- 6.3 Line Spectra and the Bohr Model** 263  
Line Spectra 263 Bohr's Model 264 The Energy States of the Hydrogen Atom 265 Limitations of the Bohr Model 268
- 6.4 The Wave Behavior of Matter** 268  
The Uncertainty Principle 270
- 6.5 Quantum Mechanics and Atomic Orbitals** 271  
Orbitals and Quantum Numbers 272
- 6.6 Representations of Orbitals** 275  
The *s* Orbitals 275 The *p* Orbitals 277 The *d* and *f* Orbitals 278
- 6.7 Many-Electron Atoms** 278  
Orbitals and Their Energies 279 Electron Spin and the Pauli Exclusion Principle 280
- 6.8 Electron Configurations** 280  
Hund's Rule 282 Condensed Electron Configurations 284 Transition Metals 284 The Lanthanides and Actinides 285

- 6.9 Electron Configurations and the Periodic Table** 285  
Anomalous Electron Configurations 288  
**Chapter Summary and Key Terms** 290  
**Learning Outcomes** 291 **Key Equations** 292  
**Exercises** 292 **Additional Exercises** 297  
**Integrative Exercises** 299 **Design an Experiment** 299

- 
- A Closer Look** Measurement and the Uncertainty Principle 270
- A Closer Look** Thought Experiments and Schrödinger's Cat 273
- A Closer Look** Probability Density and Radial Probability Functions 277
- Chemistry and Life** Nuclear Spin and Magnetic Resonance Imaging 281

## 7 Periodic Properties of the Elements 300

- 7.1 Development of the Periodic Table** 302
- 7.2 Effective Nuclear Charge** 303
- 7.3 Sizes of Atoms and Ions** 306  
Periodic Trends in Atomic Radii 308 Periodic Trends in Ionic Radii 308
- 7.4 Ionization Energy** 312  
Variations in Successive Ionization Energies 312  
Periodic Trends in First Ionization Energies 313  
Electron Configurations of Ions 314
- 7.5 Electron Affinity** 316  
Periodic Trends in Electron Affinity 317
- 7.6 Metals, Nonmetals, and Metalloids** 317  
Metals 318 Nonmetals 320 Metalloids 322
- 7.7 Trends for Group 1A and Group 2A Metals** 322  
Group 1A: The Alkali Metals 322 Group 2A: The Alkaline Earth Metals 326
- 7.8 Trends for Selected Nonmetals** 327  
Hydrogen 327 Group 6A: The Oxygen Group 328  
Group 7A: The Halogens 329 Group 8A: The Noble Gases 331
- Chapter Summary and Key Terms** 332  
**Learning Outcomes** 333 **Key Equations** 333  
**Exercises** 334 **Additional Exercises** 338

**Integrative Exercises** 340 **Design an Experiment** 341

**A Closer Look** Effective Nuclear Charge 306

**Chemistry Put to Work** Ionic Size and Lithium-Ion Batteries 311

**Chemistry and Life** The Improbable Development of Lithium Drugs 325

## 8 Basic Concepts of Chemical Bonding 342

**8.1 Lewis Symbols and the Octet Rule** 344  
The Octet Rule 344

**8.2 Ionic Bonding** 345  
Energetics of Ionic Bond Formation 346 Electron Configurations of Ions of the *s*- and *p*-Block Elements 348 Transition Metal Ions 349

**8.3 Covalent Bonding** 350  
Lewis Structures 351 Multiple Bonds 352

**8.4 Bond Polarity and Electronegativity** 353  
Electronegativity 353 Electronegativity and Bond Polarity 354 Dipole Moments 355 Comparing Ionic and Covalent Bonding 358

**8.5 Drawing Lewis Structures** 359  
Formal Charge and Alternative Lewis Structures 361

**8.6 Resonance Structures** 363  
Resonance in Benzene 365

**8.7 Exceptions to the Octet Rule** 366  
Odd Number of Electrons 367 Less Than an Octet of Valence Electrons 367 More Than an Octet of Valence Electrons 368

**8.8 Strengths and Lengths of Covalent Bonds** 369

**Chapter Summary and Key Terms** 372

**Learning Outcomes** 373 **Key Equations** 373

**Exercises** 373 **Additional Exercises** 378

**Integrative Exercises** 379 **Design an Experiment** 381

**A Closer Look** Calculation of Lattice Energies: The Born–Haber Cycle 349

**A Closer Look** Oxidation Numbers, Formal Charges, and Actual Partial Charges 363

## 9 Molecular Geometry and Bonding Theories 382

**9.1 Molecular Shapes** 384

**9.2 The VSEPR Model** 386

Applying the VSEPR Model to Determine Molecular Shapes 387 Effect of Nonbonding Electrons and Multiple Bonds on Bond Angles 391 Molecules with Expanded Valence Shells 391 Shapes of Larger Molecules 394

**9.3 Molecular Shape and Molecular Polarity** 396

**9.4 Covalent Bonding and Orbital Overlap** 398

**9.5 Hybrid Orbitals** 399

*sp* Hybrid Orbitals 399 *sp*<sup>2</sup> and *sp*<sup>3</sup> Hybrid Orbitals 401 Hypervalent Molecules 403 Hybrid Orbital Summary 403

**9.6 Multiple Bonds** 405

Resonance Structures, Delocalization, and  $\pi$  Bonding 409 General Conclusions about  $\sigma$  and  $\pi$  Bonding 411

**9.7 Molecular Orbitals** 412

Molecular Orbitals of the Hydrogen Molecule 412 Bond Order 414

**9.8 Bonding in Period 2 Diatomic Molecules** 415

Molecular Orbitals for Li<sub>2</sub> and Be<sub>2</sub> 416 Molecular Orbitals from 2*p* Atomic Orbitals 417 Electron Configurations for B<sub>2</sub> through Ne<sub>2</sub> 420 Electron Configurations and Molecular Properties 421 Heteronuclear Diatomic Molecules 424

**Chapter Summary and Key Terms** 426

**Learning Outcomes** 427 **Key Equations** 428

**Exercises** 428 **Additional Exercises** 433

**Integrative Exercises** 436 **Design an Experiment** 437

**Chemistry and Life** The Chemistry of Vision 411

**A Closer Look** Phases in Atomic and Molecular Orbitals 418

**Chemistry Put to Work** Orbitals and Energy 425

# 10 Gases 438

- 10.1 Characteristics of Gases 440**
- 10.2 Pressure 441**  
Atmospheric Pressure and the Barometer 441
- 10.3 The Gas Laws 444**  
The Pressure–Volume Relationship: Boyle’s Law 444  
The Temperature–Volume Relationship: Charles’s Law 445  
The Quantity–Volume Relationship: Avogadro’s Law 446
- 10.4 The Ideal-Gas Equation 447**  
Relating the Ideal-Gas Equation and the Gas Laws 450
- 10.5 Further Applications of the Ideal-Gas Equation 451**  
Gas Densities and Molar Mass 451  
Volumes of Gases in Chemical Reactions 453
- 10.6 Gas Mixtures and Partial Pressures 454**  
Partial Pressures and Mole Fractions 455
- 10.7 The Kinetic-Molecular Theory of Gases 456**  
Distributions of Molecular Speed 457  
Application of Kinetic-Molecular Theory to the Gas Laws 458
- 10.8 Molecular Effusion and Diffusion 459**  
Graham’s Law of Effusion 460  
Diffusion and Mean Free Path 461
- 10.9 Real Gases: Deviations from Ideal Behavior 463**  
The van der Waals Equation 465  
**Chapter Summary and Key Terms 467**  
**Learning Outcomes 468** **Key Equations 468**  
**Exercises 468** **Additional Exercises 474**  
**Integrative Exercises 476** **Design an Experiment 477**

**Strategies for Success** Calculations Involving Many Variables 449

**A Closer Look** The Ideal-Gas Equation 458

**Chemistry Put to Work** Gas Separations 462

# 11 Liquids and Intermolecular Forces 478

- 11.1 A Molecular Comparison of Gases, Liquids, and Solids 480**
- 11.2 Intermolecular Forces 482**  
Dispersion Forces 483  
Dipole–Dipole Interactions 484  
Hydrogen Bonding 485  
Ion–Dipole Forces 488  
Comparing Intermolecular Forces 488
- 11.3 Select Properties of Liquids 489**  
Viscosity 490  
Surface Tension 491  
Capillary Action 492
- 11.4 Phase Changes 493**  
Energy Changes Accompany Phase Changes 493  
Heating Curves 494  
Critical Temperature and Pressure 495
- 11.5 Vapor Pressure 497**  
Volatility, Vapor Pressure, and Temperature 498  
Vapor Pressure and Boiling Point 499
- 11.6 Phase Diagrams 500**  
The Phase Diagrams of H<sub>2</sub>O and CO<sub>2</sub> 501
- 11.7 Liquid Crystals 503**  
Types of Liquid Crystals 503  
**Chapter Summary and Key Terms 506** **Learning Outcomes 507** **Exercises 507** **Additional Exercises 512** **Integrative Exercises 514** **Design an Experiment 515**

**Chemistry Put to Work** Ionic Liquids 491

**A Closer Look** The Clausius–Clapeyron Equation 499

# 12 Solids and Modern Materials 516

- 12.1 Classification of Solids 518**
- 12.2 Structures of Solids 519**  
Crystalline and Amorphous Solids 519  
Unit Cells and Crystal Lattices 519  
Filling the Unit Cell 521

- 12.3 Metallic Solids 522**  
The Structures of Metallic Solids 523 Close Packing 524 Alloys 527
- 12.4 Metallic Bonding 530**  
Electron-Sea Model 530 Molecular Orbital Model 531
- 12.5 Ionic Solids 533**  
Structures of Ionic Solids 534
- 12.6 Molecular Solids 538**
- 12.7 Covalent-Network Solids 538**  
Semiconductors 539 Semiconductor Doping 541
- 12.8 Polymers 544**  
Making Polymers 545 Structure and Physical Properties of Polymers 548
- 12.9 Nanomaterials 550**  
Semiconductors on the Nanoscale 550 Metals on the Nanoscale 551 Carbon on the Nanoscale 553  
**Chapter Summary and Key Terms 556**  
**Learning Outcomes 557 Key Equations 557**  
**Exercises 558 Additional Exercises 565**  
**Integrative Exercises 566 Design an Experiment 567**

**A Closer Look** X-ray Diffraction 522

**Chemistry Put to Work** Alloys of Gold 529

**Chemistry Put to Work** Solid-State Lighting 543

**Chemistry Put to Work** Modern Materials in the Automobile 547

**Chemistry Put to Work** Microporous and Mesoporous Materials 552

## 13 Properties of Solutions 568

- 13.1 The Solution Process 570**  
The Natural Tendency toward Mixing 570 The Effect of Intermolecular Forces on Solution Formation 571 Energetics of Solution Formation 572 Solution Formation and Chemical Reactions 574
- 13.2 Saturated Solutions and Solubility 574**
- 13.3 Factors Affecting Solubility 576**  
Solute–Solvent Interactions 576 Pressure Effects 578 Temperature Effects 581
- 13.4 Expressing Solution Concentration 582**  
Mass Percentage, ppm, and ppb 582 Mole Fraction, Molarity, and Molality 583 Converting Concentration Units 584

- 13.5 Colligative Properties 586**  
Vapor–Pressure Lowering 586 Boiling-Point Elevation 588 Freezing-Point Depression 589 Osmosis 591 Determination of Molar Mass from Colligative Properties 594
- 13.6 Colloids 596**  
Hydrophilic and Hydrophobic Colloids 597 Colloidal Motion in Liquids 599  
**Chapter Summary and Key Terms 600**  
**Learning Outcomes 601 Key Equations 602**  
**Exercises 602 Additional Exercises 608**  
**Integrative Exercises 609 Design an Experiment 611**

**Chemistry and Life** Fat-Soluble and Water-Soluble Vitamins 577

**Chemistry and Life** Blood Gases and Deep-Sea Diving 581

**A Closer Look** Ideal Solutions with Two or More Volatile Components 588

**A Closer Look** The van't Hoff Factor 595

**Chemistry and Life** Sickle-Cell Anemia 599

## 14 Chemical Kinetics 612

- 14.1 Factors That Affect Reaction Rates 614**
- 14.2 Reaction Rates 615**  
Change of Rate with Time 616 Instantaneous Rate 617 Reaction Rates and Stoichiometry 618
- 14.3 Concentration and Rate Laws 619**  
Reaction Orders: The Exponents in the Rate Law 621 Magnitudes and Units of Rate Constants 623 Using Initial Rates to Determine Rate Laws 624
- 14.4 The Change of Concentration with Time 625**  
First-Order Reactions 625 Second-Order Reactions 627 Zero-Order Reactions 629 Half-Life 629
- 14.5 Temperature and Rate 631**  
The Collision Model 631 The Orientation Factor 632 Activation Energy 632 The Arrhenius Equation 634 Determining the Activation Energy 635
- 14.6 Reaction Mechanisms 637**  
Elementary Reactions 637 Multistep Mechanisms 637 Rate Laws for Elementary Reactions 639 The Rate-Determining Step for a Multistep Mechanism 640 Mechanisms with a Slow Initial Step 641 Mechanisms with a Fast Initial Step 642

**14.7 Catalysis 644**

Homogeneous Catalysis 644 Heterogeneous Catalysis 646 Enzymes 647

**Chapter Summary and Key Terms 652**  
**Learning Outcomes 652 Key Equations 653**  
**Exercises 653 Additional Exercises 661**  
**Integrative Exercises 664 Design an Experiment 665**

**A Closer Look** Using Spectroscopic Methods to Measure Reaction Rates: Beer's Law 620

**Chemistry Put to Work** Methyl Bromide in the Atmosphere 630

**Chemistry Put to Work** Catalytic Converters 648

**Chemistry and Life** Nitrogen Fixation and Nitrogenase 650

**15 Chemical Equilibrium 666****15.1 The Concept of Equilibrium 669****15.2 The Equilibrium Constant 671**

Evaluating  $K_c$  673 Equilibrium Constants in Terms of Pressure,  $K_p$  674 Equilibrium Constants and Units 675

**15.3 Understanding and Working with Equilibrium Constants 676**

The Magnitude of Equilibrium Constants 676  
 The Direction of the Chemical Equation and  $K$  677  
 Relating Chemical Equation Stoichiometry and Equilibrium Constants 678

**15.4 Heterogeneous Equilibria 680****15.5 Calculating Equilibrium Constants 682****15.6 Applications of Equilibrium Constants 684**

Predicting the Direction of Reaction 685 Calculating Equilibrium Concentrations 686

**15.7 Le Châtelier's Principle 688**

Change in Reactant or Product Concentration 690  
 Effects of Volume and Pressure Changes 691 Effect of Temperature Changes 693 The Effect of Catalysts 695

**Chapter Summary and Key Terms 698**  
**Learning Outcomes 699 Key Equations 699**  
**Exercises 700 Additional Exercises 705**  
**Integrative Exercises 706 Design an Experiment 707**

**Chemistry Put to Work** The Haber Process 672

**A Closer Look** Temperature Changes and Le Châtelier's Principle 695

**Chemistry Put to Work** Controlling Nitric Oxide Emissions 698

**16 Acid–Base Equilibria 708****16.1 Arrhenius Acids and Bases 710****16.2 Brønsted–Lowry Acids and Bases 711**

The  $H^+$  Ion in Water 711 Proton-Transfer Reactions 711 Conjugate Acid–Base Pairs 712 Relative Strengths of Acids and Bases 714

**16.3 The Autoionization of Water 716**

The Ion Product of Water 716

**16.4 The pH Scale 718**

pOH and Other “p” Scales 720 Measuring pH 721

**16.5 Strong Acids and Bases 722**

Strong Acids 722 Strong Bases 723

**16.6 Weak Acids 724**

Calculating  $K_a$  from pH 725 Percent Ionization 726 Using  $K_a$  to Calculate pH 727 Polyprotic Acids 731

**16.7 Weak Bases 734**

Types of Weak Bases 734

**16.8 Relationship Between  $K_a$  and  $K_b$  737****16.9 Acid–Base Properties of Salt Solutions 740**

An Anion's Ability to React with Water 740  
 A Cation's Ability to React with Water 740  
 Combined Effect of Cation and Anion in Solution 741

**16.10 Acid–Base Behavior and Chemical Structure 743**

Factors That Affect Acid Strength 743 Binary Acids 744 Oxyacids 745 Carboxylic Acids 747

**16.11 Lewis Acids and Bases 748**

**Chapter Summary and Key Terms 751**  
**Learning Outcomes 751 Key Equations 752**  
**Exercises 752 Additional Exercises 757**  
**Integrative Exercises 759 Design an Experiment 759**

**A Closer Look** Polyprotic Acids 733

**Chemistry Put to Work** Amines and Amine Hydrochlorides 739

**Chemistry and Life** The Amphiprotic Behavior of Amino Acids 747

## 17 Additional Aspects of Aqueous Equilibria 760

- 17.1 The Common-Ion Effect** 762
- 17.2 Buffers** 765  
Composition and Action of Buffers 765 Calculating the pH of a Buffer 767 Buffer Capacity and pH Range 770 Addition of Strong Acids or Bases to Buffers 770
- 17.3 Acid–Base Titrations** 773  
Strong Acid–Strong Base Titrations 774 Weak Acid–Strong Base Titrations 776 Titrating with an Acid–Base Indicator 780 Titrations of Polyprotic Acids 782
- 17.4 Solubility Equilibria** 783  
The Solubility-Product Constant,  $K_{sp}$  784 Solubility and  $K_{sp}$  785
- 17.5 Factors That Affect Solubility** 787  
The Common-Ion Effect 787 Solubility and pH 788 Formation of Complex Ions 790 Amphoterism 793
- 17.6 Precipitation and Separation of Ions** 795  
Selective Precipitation of Ions 796
- 17.7 Qualitative Analysis for Metallic Elements** 797

**Chapter Summary and Key Terms** 800  
**Learning Outcomes** 801 **Key Equations** 801  
**Exercises** 802 **Additional Exercises** 807  
**Integrative Exercises** 808 **Design an Experiment** 809

**Chemistry and Life** Blood as a Buffered Solution 773

**A Closer Look** Limitations of Solubility Products 787

**Chemistry and Life** Tooth Decay and Fluoridation 790

**A Closer Look** Lead Contamination in Drinking Water 794

## 18 Chemistry of the Environment 810

- 18.1 Earth's Atmosphere** 812  
Composition of the Atmosphere 813

Photochemical Reactions in the Atmosphere 814  
Ozone in the Stratosphere 817

### 18.2 Human Activities and Earth's Atmosphere 818

The Ozone Layer and Its Depletion 818 Sulfur Compounds and Acid Rain 820 Nitrogen Oxides and Photochemical Smog 823 Greenhouse Gases: Water Vapor, Carbon Dioxide, and Climate 824

### 18.3 Earth's Water 828

The Global Water Cycle 828 Salt Water: Earth's Oceans and Seas 829 Freshwater and Groundwater 830

### 18.4 Human Activities and Water Quality 831

Dissolved Oxygen and Water Quality 832 Water Purification: Desalination 832 Water Purification: Municipal Treatment 833

### 18.5 Green Chemistry 836

Supercritical Solvents 838 Greener Reagents and Processes 838

**Chapter Summary and Key Terms** 841

**Learning Outcomes** 841 **Exercises** 842

**Additional Exercises** 847 **Integrative**

**Exercises** 848 **Design an Experiment** 849

**A Closer Look** Other Greenhouse Gases 827

# 22

## Chemistry of the Nonmetals 986

**22.1 Periodic Trends and Chemical Reactions 988**

Chemical Reactions 989

**22.2 Hydrogen 990**

Isotopes of Hydrogen 990 Properties of Hydrogen 991 Production of Hydrogen 992 Uses of Hydrogen 993 Binary Hydrogen Compounds 993

**22.3 Group 18: The Noble Gases 994**

Noble-Gas Compounds 995

**22.4 Group 17: The Halogens 996**

Properties and Production of the Halogens 996 Uses of the Halogens 998 The Hydrogen Halides 998 Interhalogen Compounds 998 Oxyacids and Oxyanions 998

**22.5 Oxygen 999**

Properties of Oxygen 999 Production of Oxygen 1000 Uses of Oxygen 1000 Ozone 1000 Oxides 1000 Peroxides and Superoxides 1002

**22.6 The Other Group 16 Elements: S, Se, Te, and Po 1002**

Occurrence and Production of S, Se, and Te 1003 Properties and Uses of Sulfur, Selenium, and Tellurium 1003 Sulfides 1003 Oxides, Oxyacids, and Oxyanions of Sulfur 1004

**22.7 Nitrogen 1006**

Properties of Nitrogen 1006 Production and Uses of Nitrogen 1006 Hydrogen Compounds of Nitrogen 1006 Oxides and Oxyacids of Nitrogen 1007

**22.8 The Other Group 15 Elements: P, As, Sb, and Bi 1009**

Occurrence, Isolation, and Properties of Phosphorus 1010 Phosphorus Halides 1010 Oxy Compounds of Phosphorus 1011

**22.9 Carbon 1013**

Elemental Forms of Carbon 1013 Oxides of Carbon 1014 Carbonic Acid and Carbonates 1015 Carbides 1016

**22.10 The Other Group 14 Elements: Si, Ge, Sn, and Pb 1016**

General Characteristics of the Group 14 Elements 1016 Occurrence and Preparation of Silicon 1017 Silicates 1017 Glass 1019 Silicones 1020

**22.11 Boron 1020****Chapter Summary and Key Terms 1022 Learning Outcomes 1023 Exercises 1023 Additional Exercises 1027 Integrative Exercises 1028 Design an Experiment 1029****A Closer Look** The Hydrogen Economy 992**Chemistry and Life** Nitroglycerin, Nitric Oxide, and Heart Disease 1009**Chemistry and Life** Arsenic in Drinking Water 1012**Chemistry Put to Work** Carbon Fibers and Composites 1014

# 23

## Transition Metals and Coordination Chemistry 1030

**23.1 The Transition Metals 1032**

Physical Properties 1033 Electron Configurations and Oxidation States 1034 Magnetism 1035

**23.2 Transition-Metal Complexes 1036**

The Development of Coordination Chemistry: Werner's Theory 1037 The Metal-Ligand Bond 1039 Charges, Coordination Numbers, and Geometries 1040

**23.3 Common Ligands in Coordination Chemistry 1041**

Metals and Chelates in Living Systems 1043

**23.4 Nomenclature and Isomerism in Coordination Chemistry 1047**

Isomerism 1049 Structural Isomerism 1049 Stereoisomerism 1050

### 23.5 Color and Magnetism in Coordination Chemistry 1053

Color 1053 Magnetism of Coordination Compounds 1055

### 23.6 Crystal-Field Theory 1055

Electron Configurations in Octahedral Complexes 1059 Tetrahedral and Square-Planar Complexes 1061

**Chapter Summary and Key Terms 1065**

**Learning Outcomes 1065 Exercises 1066**

**Additional Exercises 1070 Integrative**

**Exercises 1072 Design an Experiment 1073**

**A Closer Look** Entropy and the Chelate Effect 1045

**Chemistry and Life** The Battle for Iron in Living Systems 1046

**A Closer Look** Charge-Transfer Color 1063

## 24 The Chemistry of Life: Organic and Biological Chemistry 1074

### 24.1 General Characteristics of Organic Molecules 1076

The Structures of Organic Molecules 1076  
The Stability of Organic Compounds 1077 Solubility and Acid–Base Properties of Organic Compounds 1077

### 24.2 Introduction to Hydrocarbons 1078

Structures of Alkanes 1079 Structural Isomers 1079 Nomenclature of Alkanes 1080 Cycloalkanes 1083 Reactions of Alkanes 1083

### 24.3 Alkenes, Alkynes, and Aromatic Hydrocarbons 1085

Alkenes 1085 Alkynes 1087 Addition Reactions of Alkenes and Alkynes 1088 Aromatic Hydrocarbons 1089 Stabilization of  $\pi$  Electrons by Delocalization 1090 Substitution Reactions of Aromatic Hydrocarbons 1090

### 24.4 Organic Functional Groups 1092

Alcohols 1092 Ethers 1094 Aldehydes and Ketones 1094 Carboxylic Acids and Esters 1095 Amines and Amides 1098

### 24.5 Chirality in Organic Chemistry 1099

### 24.6 Introduction to Biochemistry 1101

### 24.7 Proteins 1101

Amino Acids 1101 Polypeptides and Proteins 1103 Protein Structure 1104

### 24.8 Carbohydrates 1106

Disaccharides 1107 Polysaccharides 1108

### 24.9 Lipids 1109

Fats 1109 Phospholipids 1110

### 24.10 Nucleic Acids 1111

**Chapter Summary and Key Terms 1115**

**Learning Outcomes 1116 Exercises 1116**

**Additional Exercises 1121 Integrative**

**Exercises 1122 Design an Experiment 1123**

## Interactive Sample Exercises

Sample Exercise 1.1	Distinguishing among Elements, Compounds, and Mixtures	Sample Exercise 4.13	Using Molarity to Calculate Grams of Solute
Sample Exercise 1.2	Using SI Prefixes	Sample Exercise 5.1	Relating Heat and Work to Changes of Internal Energy
Sample Exercise 1.6	Assigning Appropriate Significant Figures	Sample Exercise 5.4	Relating $\Delta H$ to Quantities of Reactants and Products
Sample Exercise 1.8	Determining the Number of Significant Figures in a Calculated Quantity	Sample Exercise 5.6	Measuring $\Delta H$ Using a Coffee-Cup Calorimeter
Sample Exercise 1.11	Converting Units Using Two or More Conversion Factors	Sample Exercise 5.7	Measuring $q_{\text{rxn}}$ Using a Bomb Calorimeter
Sample Exercise 1.13	Conversions Involving Density	Sample Exercise 5.8	Using Hess's Law to Calculate $\Delta H$
Sample Exercise 2.1	Atomic Size	Sample Exercise 5.10	Equations Associated with Enthalpy of Formation
Sample Exercise 2.3	Writing Symbols for Atoms	Sample Exercise 6.6	Subshells of the Hydrogen Atom
Sample Exercise 2.4	Calculating the Atomic Weight of an Element from Isotopic Abundance	Sample Exercise 6.7	Orbital Diagrams and Electron Configurations
Sample Exercise 2.5	Using the Periodic Table	Sample Exercise 6.8	Electron Configurations for a Group
Sample Exercise 2.9	Identifying Ionic and Molecular Compounds	Sample Exercise 7.2	Predicting Relative Sizes of Atomic Radii
Sample Exercise 3.2	Balancing Chemical Equations	Sample Exercise 8.2	Charges on Ions
Sample Exercise 3.5	Calculating Formula Weights	Sample Exercise 8.6	Drawing a Lewis Structure
Sample Exercise 3.8	Converting Moles to Number of Atoms	Sample Exercise 9.1	Using the VSEPR Model
Sample Exercise 3.18	Calculating the Amount of Product Formed from a Limiting Reactant	Sample Exercise 10.3	Evaluating the Effects of Changes in $P$ , $V$ , $n$ , and $T$ on a Gas
Sample Exercise 4.1	Relating Relative Numbers of Anions and Cations to Chemical Formulas	Sample Exercise 10.4	Using the Ideal-Gas Equation
Sample Exercise 4.3	Predicting a Metathesis Reaction	Sample Exercise 11.4	Relating Boiling Point to Vapor Pressure
Sample Exercise 4.4	Writing a Net Ionic Equation	Sample Exercise 12.4	Identifying Types of Semiconductors

Sample Exercise 13.6 Calculation of Molarity Using the  
Density of the Solution

Sample Exercise 14.3 Relating Rates at Which Products  
Appear and Reactants Disappear

Sample Exercise 15.1 Writing Equilibrium-Constant  
Expressions

Sample Exercise 16.1 Identifying Conjugate Acids and Bases

Sample Practice 17.11 Calculating  $K_{sp}$  from Solubility

Sample Exercise 18.1 Calculating Concentration from  
Partial Pressure

Sample Exercise 19.1 Identifying Spontaneous Processes

Sample Exercise 20.2 Balancing Redox Equations  
in Acidic Solution

Sample Exercise 21.1 Predicting the Product of a  
Nuclear Reaction

Sample Exercise 22.4 Predicting Chemical Reactions among  
the Halogens

Sample Exercise 23.2 Determining the Oxidation Number of  
a Metal in a Complex

Sample Exercise 24.1 Naming Alkanes

# PREFACE

## To the Instructor

### Philosophy

We the authors of *Chemistry: The Central Science* are delighted and honored that you have chosen us as your instructional partners for your general chemistry class. Collectively we have taught general chemistry to multiple generations of students. So we understand the challenges and opportunities of teaching a class that so many students take. We have also been active researchers who appreciate both the learning and the discovery aspects of the chemical sciences. Our varied, wide-ranging experiences have formed the basis of the close collaborations we have enjoyed as coauthors. In writing our book, our focus is on the students: we try to ensure that the text is not only accurate and up-to-date but also clear and readable. We strive to convey the breadth of chemistry and the excitement that scientists experience in making new discoveries that contribute to our understanding of the physical world. We want the student to appreciate that chemistry is not a body of specialized knowledge that is separate from most aspects of modern life, but central to any attempt to address a host of societal concerns, including renewable energy, environmental sustainability, and improved human health.

Publishing the fourteenth edition of this text bespeaks an exceptionally long record of successful textbook writing. We are appreciative of the loyalty and support the book has received over the years, and mindful of our obligation to justify each new edition. We begin our approach to each new edition with an intensive author retreat, in which we ask ourselves the deep questions that we must answer before we can move forward. What justifies yet another edition? What is changing in the world not only of chemistry, but with respect to science education and the qualities of the students we serve? How can we help your students not only learn the principles of chemistry, but also become critical thinkers who can think more like chemists? The answers lie only partly in the changing face of chemistry itself. The introduction of many new technologies has changed the landscape in the teaching of sciences at all levels. The use of the Internet in accessing information and presenting learning materials has markedly changed the role of the textbook as one element among many tools for student learning. Our challenge as authors is to maintain the text as the primary source of chemical knowledge and practice, while at the same time integrating it with the new avenues for learning made possible by technology. This edition incorporates a number of those new methodologies, including use of computer-based classroom tools, such as Learning Catalytics™, a cloud-based active learning analytics and assessment system, and web-based tools, particularly Pearson Mastering Chemistry, which is continually evolving

to provide more effective means of testing and evaluating student performance, while giving the student immediate and helpful feedback. Pearson Mastering Chemistry not only provides feedback on a question by question basis but, using Knewton-enhanced adaptive follow-up assignments, it now continually adapts to each student, offering a personalized learning experience.

As authors, we want this text to be a central, indispensable learning tool for students. Whether as a physical book or in electronic form, it can be carried everywhere and used at any time. It is the best place students can go to obtain the information outside of the classroom needed for learning, skill development, reference, and test preparation. The text, more effectively than any other instrument, provides the depth of coverage and coherent background in modern chemistry that students need to serve their professional interests and, as appropriate, to prepare for more advanced chemistry courses.

If the text is to be effective in supporting your role as instructor, it must be addressed to the students. We have done our best to keep our writing clear and interesting and the book attractive and well illustrated. The book has numerous in-text study aids for students including carefully placed descriptions of problem-solving strategies. We hope that our cumulative experiences as teachers is evident in our pacing, choice of examples, and the kinds of study aids and motivational tools we have employed. We believe students are more enthusiastic about learning chemistry when they see its importance relative to their own goals and interests; therefore, we have highlighted many important applications of chemistry in everyday life. We hope you make use of this material.

It is our philosophy, as authors, that the text and all the supplementary materials provided to support its use must work in concert with you, the instructor. A textbook is only as useful to students as the instructor permits it to be. This book is replete with features that help students learn and that can guide them as they acquire both conceptual understanding and problem-solving skills. There is a great deal here for the students to use, too much for all of it to be absorbed by any student in a one-year course. You will be the guide to the best use of the book. Only with your active help will the students be able to utilize most effectively all that the text and its supplements offer. Students care about grades, of course, and with encouragement they will also become interested in the subject matter and care about learning. Please consider emphasizing features of the book that can enhance student appreciation of chemistry, such as the *Chemistry Put To Work* and *Chemistry and Life* boxes that show how chemistry impacts modern life and its relationship to health and life processes. Also consider emphasizing conceptual understanding (placing less emphasis on simple manipulative, algorithmic problem solving) and urging students to use the rich online resources available.

## Organization and Contents

The first five chapters give a largely macroscopic, phenomenological view of chemistry. The basic concepts introduced—such as nomenclature, stoichiometry, and thermochemistry—provide necessary background for many of the laboratory experiments usually performed in general chemistry. We believe that an early introduction to thermochemistry is desirable because so much of our understanding of chemical processes is based on considerations of energy changes. By incorporating bond enthalpies in the Thermochemistry chapter we aim to emphasize the connection between the macroscopic properties of substances and the submicroscopic world of atoms and bonds. We believe we have produced an effective, balanced approach to teaching thermodynamics in general chemistry, as well as providing students with an introduction to some of the global issues involving energy production and consumption. It is no easy matter to walk the narrow pathway between—on the one hand—trying to teach too much at too high a level and—on the other hand—resorting to oversimplifications. As with the book as a whole, the emphasis has been on imparting *conceptual* understanding, as opposed to presenting equations into which students are supposed to plug numbers.

The next four chapters (Chapters 6–9) deal with electronic structure and bonding. For more advanced students, *A Closer Look* boxes in Chapters 6 and 9 highlight radial probability functions and the phases of orbitals. Our approach of placing this latter discussion in *A Closer Look* box in Chapter 9 enables those who wish to cover this topic to do so, while others may wish to bypass it. In treating this topic and others in Chapters 7 and 9, we have materially enhanced the accompanying figures to more effectively bring home their central messages.

In Chapters 10–13, the focus of the text changes to the next level of the organization of matter: examining the states of matter. Chapters 10 and 11 deal with gases, liquids, and intermolecular forces, while Chapter 12 is devoted to solids, presenting a contemporary view of the solid state as well as of modern materials accessible to general chemistry students. The chapter provides an opportunity to show how abstract chemical bonding concepts impact real-world applications. The modular organization of the chapter allows you to tailor your coverage to focus on the materials (semiconductors, polymers, nanomaterials, and so forth) that are most relevant to your students and your own interests. This section of the book concludes with Chapter 13 which covers the formation and properties of solutions.

The next several chapters examine the factors that determine the speed and extent of chemical reactions: kinetics (Chapter 14), equilibria (Chapters 15–17), thermodynamics (Chapter 19), and electrochemistry (Chapter 20). Also in this section is a chapter on environmental chemistry (Chapter 18), in which the concepts developed in preceding chapters are applied to a discussion of the atmosphere and hydrosphere. This chapter has increasingly come to be focused on green chemistry and the impacts of human activities on Earth's water and atmosphere.

After a discussion of nuclear chemistry (Chapter 21), the book ends with three survey chapters. Chapter 22 deals with nonmetals, Chapter 23 with the chemistry of transition

metals, including coordination compounds, and Chapter 24 with the chemistry of organic compounds and elementary biochemical themes. These final four chapters are developed in an independent, modular fashion and can be covered in any order.

Our chapter sequence provides a fairly standard organization, but we recognize that not everyone teaches all the topics in the order we have chosen. We have therefore made sure that instructors can make common changes in teaching sequence with no loss in student comprehension. In particular, many instructors prefer to introduce gases (Chapter 10) after stoichiometry (Chapter 3) rather than with states of matter. The chapter on gases has been written to permit this change with *no* disruption in the flow of material. It is also possible to treat balancing redox equations (Sections 20.1 and 20.2) earlier, after the introduction of redox reactions in Section 4.4. Finally, some instructors like to cover organic chemistry (Chapter 24) right after bonding (Chapters 8 and 9). This, too, is a largely seamless move.

We have brought students into greater contact with descriptive organic and inorganic chemistry by integrating examples throughout the text. You will find pertinent and relevant examples of “real” chemistry woven into all the chapters to illustrate principles and applications. Some chapters, of course, more directly address the “descriptive” properties of elements and their compounds, especially Chapters 4, 7, 11, 18, and 22–24. We also incorporate descriptive organic and inorganic chemistry in the end-of-chapter exercises.

## New in This Edition

As with every new edition of *Chemistry: The Central Science* the book has undergone a great many changes as we strive to keep the content current, and to improve the clarity and effectiveness of the text, the art, and the exercises. Among the myriad changes there are certain points of emphasis that we use to organize and guide the revision process. In creating the fourteenth edition our revision was organized around the following points:

- Our treatment of energy and thermochemistry has been significantly revised. The concept of energy is now introduced in Chapter 1, whereas previously it did not appear until Chapter 5. This change allows instructors greater freedom in the order in which they cover the material. For example, this change would facilitate coverage of Chapters 6 and 7 immediately following Chapter 2, a sequence that is in line with an atoms-first approach to teaching general chemistry. More importantly, bond enthalpies are now integrated into Chapter 5 to emphasize the connection between macroscopic quantities, like reaction enthalpies, and the submicroscopic world of atoms and bonds. We feel this change leads to a better integration of thermochemical concepts with the surrounding chapters. Bond enthalpies are revisited in Chapter 8 after students have developed a more sophisticated view of chemical bonding.
- Considerable effort was made to provide students with a clear discussion, superior problem sets, and better real-

time feedback on their understanding of the material. The author team used an interactive e-book platform to view passages that students highlighted in their reading along with the related notes and questions that detailed what they did not understand. In response, numerous passages were revised for greater clarity.

- Extensive effort has gone into creating enhanced content for the eText version of the book. These features make the eText so much more than just an electronic copy of the physical textbook. New Smart Figures take key figures from the text and bring them to life through animation and narration. Likewise, new Smart Sample Exercises animate key sample exercises from the text, offering students a more in-depth and detailed discussion than can be provided in the printed text. These interactive features will also include follow-up questions, which can be assigned in Pearson Mastering Chemistry.
- We used metadata from Pearson Mastering Chemistry to inform our revisions. In the thirteenth edition a second *Practice Exercise* was added to accompany each *Sample Exercise*. Nearly all of the additional practice exercises were multiple choice questions with wrong answer distractors written to identify student misconceptions and common mistakes. As implemented in Pearson Mastering Chemistry, feedback was provided with each wrong answer to help students recognize their misconceptions. In this new edition we have carefully scrutinized the metadata from Pearson Mastering Chemistry to identify practice exercises that either were not challenging the students or were not being used. Those exercises have either been modified or changed entirely. A similar effort was made to revise *Give It Some Thought* and *Go Figure* questions to make them more effective and amenable to use in Pearson Mastering Chemistry. Finally, the number of end-of-chapter exercises that have wrong answer feedback in Pearson Mastering Chemistry has been dramatically expanded. We have also replaced outdated or little-used end-of-chapter exercises (~10 per chapter).
- Finally, subtle but important changes have been made to allow students to quickly reference important concepts and assess their knowledge of the material. Key points are now set in italic with line spaces above and below for greater emphasis. New skills-based *How To...* features offer step-by-step guidance for solving specific types of problems such as Drawing Lewis Structures, Balancing Redox Equations, and Naming Acids. These features, with numbered steps encased by a thin rule, are integrated into the main discussion and are easy to find. Finally, each Learning Objective is now correlated to specific end-of-chapter exercises. This allows students to test their mastery of each learning objective when preparing for quizzes and exams.

## Changes in This Edition

The **New in This Edition** section details changes made throughout this edition. Beyond a mere listing, however, it is worth dwelling on the general goals we set forth in formulating

this new edition. *Chemistry: The Central Science* has traditionally been valued for its clarity of writing, its scientific accuracy and currency, its strong end-of-chapter exercises, and its consistency in level of coverage. In making changes, we have made sure not to compromise these characteristics, and we have also continued to employ an open, clean design in the layout of the book.

The art program for the fourteenth edition continues the trajectory set in the previous two editions: to make greater and more effective use of the figures as learning tools, by drawing the reader more directly into the figure. The style of the art has been revised throughout for enhanced clarity and a cleaner, more modern look. This includes: new white-background annotation boxes with crisp, thin leaders; richer and more saturated colors in the art, and expanded use of 3D renderings. An editorial review of every figure in the text resulted in numerous minor revisions to the art and its labels in order to increase clarity. The *Go Figure* questions have been carefully scrutinized. Using statistics from Pearson Mastering Chemistry, many have been modified or changed entirely to engage and challenge students to think critically about the concept(s) that underlie each figure. The *Give it Some Thought* feature has been revised in a similar vein to stimulate more thoughtful reading of the text and foster critical thinking.

We provide a valuable overview of each chapter under the *What's Ahead* banner. *Concept links* (∞∞) continue to provide easy-to-see cross-references to pertinent material covered earlier in the text. The essays titled *Strategies in Chemistry*, which provide advice to students on problem solving and “thinking like a chemist,” have been renamed *Strategies for Success* to better convey their usefulness to the student.

We have continued to emphasize conceptual exercises in the end-of-chapter problems. In each chapter we begin the exercises with the well-received *Visualizing Concepts* category. These exercises are designed to facilitate conceptual understanding through use of models, graphs, photographs, and other visual materials. They precede the regular end-of-chapter exercises and are identified in each case with the relevant chapter section number. A generous selection of *Integrative Exercises*, which give students the opportunity to solve problems that integrate concepts from the present chapter with those of previous chapters, is included at the end of each chapter. The importance of integrative problem solving is highlighted by the *Sample Integrative Exercise*, which ends each chapter beginning with Chapter 4. In general, we have included more conceptual end-of-chapter exercises and have made sure that there is a good representation of somewhat more difficult exercises to provide a better mix in terms of topic and level of difficulty. Many of the exercises have been restructured to facilitate their use in Pearson Mastering Chemistry. We have made extensive use of the metadata from student use of Pearson Mastering Chemistry to analyze end-of-chapter exercises and make appropriate changes, as well as to develop *Learning Outcomes* for each chapter.

New essays in our well-received *Chemistry Put To Work* and *Chemistry and Life* series emphasize world events, scientific discoveries, and medical breakthroughs relevant to topics

developed in each chapter. We maintain our focus on the positive aspects of chemistry without neglecting the problems that can arise in an increasingly technological world. Our goal is to help students appreciate the real-world perspective of chemistry and the ways in which chemistry affects their lives.

It is perhaps a natural tendency for chemistry textbooks to grow in length with succeeding editions, but it is one that we have resisted. There are, nonetheless, many new items in this edition, mostly ones that replace other material considered less pertinent. Here is a list of several significant changes in content:

Chapter 1, and every chapter that follows, begins with a new chapter opening photo and backstory to provide a real world context for the material that follows. A new section on the nature of energy (Section 1.4) has been added to Chapter 1. The inclusion of energy in the opening chapter provides much greater flexibility for the order in which subsequent chapters can be covered. The *Chemistry Put To Work* box, dealing with *Chemistry in the News*, has been completely rewritten, with items that describe diverse ways in which chemistry intersects with the affairs of modern society.

In Chapter 2 the figures depicting the key experiments that led to the discovery of the structure of the atom—Millikan's Oil Drop experiment and Rutherford's Gold Foil experiment—have been enhanced. This is also the first occurrence of the periodic table which has been updated throughout the text to reflect the acceptance and naming of elements 113 (Nihonium), 115 (Moscovium), 117 (Tennessine), and 118 (Oganesson).

Chapter 5 has undergone the most extensive revision in the book. Early parts of the chapter have been modified to reflect the fact that basic concepts of energy are now introduced in Chapter 1. Two new figures have been added. Figure 5.3 qualitatively relates electrostatic potential energy to changes in the bonding of an ionic solid, while Figure 5.16 provides a real-world analogy to help students understand the relationship between spontaneity and reaction enthalpy. The figure illustrating exothermic and endothermic reactions (Figure 5.8) has been modified to show before and after images of the reaction. Finally, to stress the atomistic origins of reaction enthalpies, a new section (Section 5.8) on bond enthalpies has been added, as discussed earlier.

A new Sample Exercise has been added to Chapter 6 that shows how the radii of orbits in the Bohr model of the hydrogen atom depend on the principal quantum number and how the electron behavior changes when a photon is emitted or absorbed.

Chapter 8 has seen some of its content on bond enthalpies moved to Chapter 5. The concepts there are now reinforced here.

In Chapter 11, attention has been paid to the text regarding various intermolecular forces to make clear that chemists usually think about them in units of energy, not units of force. A new checklist art piece replaces old Figure 11.14 in order to make it clear that intermolecular interaction energies are additive.

Chapter 12 has a new *A Closer Look* box entitled *Modern Materials in the Automobile* which discusses the wide range of

materials used in a hybrid automobile, including semiconductors, ionic solids, alloys, polymers, and more. A new *Chemistry Put To Work* entitled *Microporous and Mesoporous Materials* examines materials with different pore sizes and their application in ion exchange and catalytic converters.

In Chapter 15 a new *A Closer Look* box on *Temperature Changes and Le Châtelier's Principle* explains the theoretical underpinnings of the empirical rules that successfully predict how temperature changes influence the equilibrium constants of exothermic and endothermic reactions.

In Chapter 16 a new *A Closer Look* box on *Polyprotic Acids* explicitly shows the speciation of ions as a function of pH.

In Chapter 17 a new *A Closer Look* box entitled *Lead Contamination in Drinking Water* explores the chemistry behind the water quality crisis in Flint, Michigan.

Chapter 18 has been revised to reflect the most up-to-date data on atmospheric CO<sub>2</sub> levels and the ozone hole. Figure 18.4, showing the UV absorption spectrum of ozone, has been added so students can understand its role in filtering out harmful UV radiation from the sun. A new Sample Exercise (18.3) walks students through the steps needed to calculate the amount of CO<sub>2</sub> produced from combustion of a hydrocarbon.

In Chapter 19 we have substantially rewritten the early sections to help students better understand the concepts of spontaneous, nonspontaneous, reversible, and irreversible processes and their relationships. These improvements have led to a clearer definition of entropy.

## To the Student

*Chemistry: The Central Science*, Fourteenth Edition, has been written to introduce you to modern chemistry. As authors, we have, in effect, been engaged by your instructor to help you learn chemistry. Based on the comments of students and instructors who have used this book in its previous editions, we believe that we have done that job well. Of course, we expect the text to continue to evolve through future editions. We invite you to write to tell us what you like about the book so that we will know where we have helped you most. Also, we would like to learn of any shortcomings so we may further improve the book in subsequent editions. Our addresses are given at the end of the Preface.

## Advice for Learning and Studying Chemistry

Learning chemistry requires both the assimilation of many concepts and the development of analytical skills. In this text, we have provided you with numerous tools to help you succeed in both tasks. If you are going to succeed in your chemistry course, you will have to develop good study habits. Science courses, and chemistry in particular, make different demands on your learning skills than do other types of courses. We offer the following tips for success in your study of chemistry:

**Don't fall behind!** As the course moves along, new topics will build on material already presented. If you don't keep up in your reading and problem solving, you will find it much harder to follow the lectures and discussions on current topics. Experienced teachers know that students who read the relevant sections of the text *before* coming to a class learn more from the class and retain greater recall. "Cramming" just before an exam has been shown to be an ineffective way to study any subject, chemistry included. So now you know. How important to you, in this competitive world, is a good grade in chemistry?

**Focus your study.** The amount of information you will be expected to learn may seem overwhelming. It is essential to recognize those concepts and skills that are particularly important. Pay attention to what your instructor is emphasizing. As you work through the *Sample Exercises* and homework assignments, try to see what general principles and skills they employ. Use the *What's Ahead* feature at the beginning of each chapter to help orient yourself to what is important in each chapter. A single reading of a chapter will generally not be enough for successful learning of chapter concepts and problem-solving skills. You will often need to go over assigned materials more than once. Don't skip the *Give It Some Thought* and *Go Figure* features, *Sample Exercises*, and *Practice Exercises*. These are your guides to whether you are learning the material. They are also good preparation for test-taking. The *Learning Outcomes* and *Key Equations* at the end of the chapter will also help you focus your study.

**Keep good lecture notes.** Your lecture notes will provide you with a clear and concise record of what your instructor regards as the most important material to learn. Using your lecture notes in conjunction with this text is the best way to determine which material to study.

**Skim topics in the text before they are covered in lecture.** Reviewing a topic before lecture will make it easier for you to take good notes. First read the *What's Ahead* points and the end-of-chapter *Summary*; then quickly read through the chapter, skipping *Sample Exercises* and supplemental sections. Paying attention to the titles of sections and subsections gives you a feeling for the scope of topics. Try to avoid thinking that you must learn and understand everything right away.

**You need to do a certain amount of preparation before lecture.** More than ever, instructors are using the lecture period not simply as a one-way channel of communication from teacher to student. Rather, they expect students to come to class ready to work on problem solving and critical thinking. Coming to class unprepared is not a good idea for any lecture environment, but it certainly is not an option for an active learning classroom if you aim to do well in the course.

**After lecture, carefully read the topics covered in class.** As you read, pay attention to the concepts presented and to the application of these concepts in the *Sample Exercises*. Once you think you understand a *Sample Exercise*, test your understanding by working the accompanying *Practice Exercise*.

**Learn the language of chemistry.** As you study chemistry, you will encounter many new words. It is important to pay attention to these words and to know their meanings or the entities to which they refer. Knowing how to identify chemical substances from their names is an important skill; it can help you avoid painful mistakes on examinations. For example, "chlorine" and "chloride" refer to very different things.

**Attempt the assigned end-of-chapter exercises.** Working the exercises selected by your instructor provides necessary practice in recalling and using the essential ideas of the chapter. You cannot learn merely by observing; you must be a participant. If you get stuck on an exercise, however, get help from your instructor, your teaching assistant, or another student. Spending more than 20 minutes on a single exercise is rarely effective unless you know that it is particularly challenging.

**Learn to think like a scientist.** This book is written by scientists who love chemistry. We encourage you to develop your critical thinking skills by taking advantage of features in this new edition, such as exercises that focus on conceptual learning, and the *Design an Experiment* exercises.

**Use online resources.** Some things are more easily learned by discovery, and others are best shown in three dimensions. If your instructor has included Pearson Mastering Chemistry with your book, take advantage of the unique tools it provides to get the most out of your time in chemistry.

The bottom line is to work hard, study effectively, and use the tools available to you, including this textbook. We want to help you learn more about the world of chemistry and why chemistry is the central science. If you really learn chemistry, you can be the life of the party, impress your friends and parents, and . . . well, also pass the course with a good grade.

## Acknowledgments

The production of a textbook is a team effort requiring the involvement of many people besides the authors who contributed hard work and talent to bring this edition to life. Although their names don't appear on the cover of the book, their creativity, time, and support have been instrumental in all stages of its development and production.

Each of us has benefited greatly from discussions with colleagues and from correspondence with instructors and students both here and abroad. Colleagues have also helped immensely by reviewing our materials, sharing their insights, and providing suggestions for improvements. For this edition, we were particularly blessed with an exceptional group of accuracy checkers who read through our materials looking for both technical inaccuracies and typographical errors.

### Fourteenth Edition Reviewers

Carribeth Bliem, *University of North Carolina, Chapel Hill*

Stephen Block, *University of Wisconsin, Madison*

William Butler, *Rochester Institute of Technology*

Rachel Campbell, *Florida Gulf Coast University*

Ted Clark, *The Ohio State University*

Michelle Dean, *Kennesaw State University*

John Gorden, *Auburn University*

Tom Greenbowe, *University of Oregon*

Nathan Grove, *University of North Carolina, Wilmington*

Brian Gute, *University of Minnesota, Duluth*

Amanda Howell, *Appalachian State University*

Angela King, *Wake Forest University*

Russ Larsen, *University of Iowa*

Joe Lazafame, *Rochester Institute of Technology*

Rosemary Loza, *The Ohio State University*

Kresimir Rupnik, *Louisiana State University*

Stacy Sandler, *Arizona State University*

Jerry Suits, *University Northern Colorado*

Troy Wood, *State University of New York, Buffalo*

Bob Zelmer, *The Ohio State University*

### Fourteenth Edition Accuracy Reviewers

Ted Clark, *The Ohio State University*

Jordan Fantini, *Denison University*

Amanda Howell, *Appalachian State University*

### Fourteenth Edition Focus Group Participants

Christine Barnes, *University of Tennessee, Knoxville*

Marian DeWane, *University California Irvine*

Emmanue Ewane, *Houston Community College*

Tom Greenbowe, *University of Oregon*

Jeffrey Rahn, *Eastern Washington University*

Bhavna Rawal, *Houston Community College*

Jerry Suits, *University of Northern Colorado*

### Pearson Mastering Chemistry Summit Participants

Phil Bennett, *Santa Fe Community College*

Jo Blackburn, *Richland College*

John Bookstaver, *St. Charles Community College*

David Carter, *Angelo State University*

Doug Cody, *Nassau Community College*

Tom Dowd, *Harper College*

Palmer Graves, *Florida International University*

Margie Haak, *Oregon State University*

Brad Herrick, *Colorado School of Mines*

Jeff Jenson, *University of Findlay*

Jeff McVey, *Texas State University at San Marcos*

Gary Michels, *Creighton University*

Bob Pribush, *Butler University*

Al Rives, *Wake Forest University*

Joel Russell, *Oakland University*

Greg Szulczewski, *University of Alabama, Tuscaloosa*

Matt Tarr, *University of New Orleans*

Dennis Taylor, *Clemson University*

Harold Trimm, *Broome Community College*

Emanuel Waddell, *University of Alabama, Huntsville*

Kurt Winklemann, *Florida Institute of Technology*

Klaus Woelk, *University of Missouri, Rolla*

Steve Wood, *Brigham Young University*

### Reviewers of Previous Editions of Chemistry: The Central Science

S.K. Airee, *University of Tennessee*

John J. Alexander, *University of Cincinnati*

Robert Allendoerfer, *SUNY Buffalo*

Patricia Amateis, *Virginia Polytechnic Institute and State University*

Sandra Anderson, *University of Wisconsin*

John Arnold, *University of California*

Socorro Arteaga, *El Paso Community College*

Margaret Asirvatham, *University of Colorado*

Todd L. Austell, *University of North Carolina, Chapel Hill*

Yiyang Bai, *Houston Community College*

Melita Balch, *University of Illinois at Chicago*

Rebecca Barlag, *Ohio University*

Rosemary Bartoszek-Loza, *The Ohio State University*

Hafed Bascal, *University of Findlay*

Boyd Beck, *Snow College*

Kelly Beefus, *Anoka-Ramsey Community College*

Amy Beilstein, *Centre College*

Donald Bellew, *University of New Mexico*

Victor Berner, *New Mexico Junior College*

Narayan Bhat, *University of Texas, Pan American*

Merrill Blackman, *United States Military Academy*

Salah M. Blaih, *Kent State University*

James A. Boiani, *SUNY Genesee*

Leon Borowski, *Diablo Valley College*

Simon Bott, *University of Houston*

Kevin L. Bray, *Washington State University*

Daeg Scott Brenner, *Clark University*

Gregory Alan Brewer, *Catholic University of America*

Karen Brewer, *Virginia Polytechnic Institute and State University*

Ron Briggs, *Arizona State University*

Edward Brown, *Lee University*

Gary Buckley, *Cameron University*

Scott Bunge, *Kent State University*

Carmela Byrnes, *Texas A&M University*

B. Edward Cain, *Rochester Institute of Technology*

Kim Calvo, *University of Akron*

Donald L. Campbell, *University of Wisconsin*

Gene O. Carlisle, *Texas A&M University*

Elaine Carter, *Los Angeles City College*

Robert Carter, *University of Massachusetts at Boston Harbor*

Ann Cartwright, *San Jacinto Central College*

David L. Cedeño, *Illinois State University*

Dana Chatellier, *University of Delaware*

Stanton Ching, *Connecticut College*

Paul Chirik, *Cornell University*

Ted Clark, *The Ohio State University*

Tom Clayton, *Knox College*

William Cleaver, *University of Vermont*

Beverly Clement, *Blinn College*

Robert D. Cloney, *Fordham University*

John Collins, *Broward Community College*

Edward Werner Cook, *Tunxis Community Technical College*

Elzbieta Cook, *Louisiana State University*

Enriqueta Cortez, *South Texas College*

Jason Coym, *University of South Alabama*

Thomas Edgar Crumm, *Indiana University of Pennsylvania*
