About the Author

Nivaldo Tro, is a Professor of Chemistry at Westmont College in Santa Barbara, California, where he has been a faculty member since 1990. He received his Ph.D. in chemistry from Stanford University for work on developing and using optical techniques to study the adsorption and desorption of molecules to and from surfaces in ultra high vacuum. He then went on to the University of California at Berkeley, where he did post doctoral research on ultrafast reaction dynamics in solution. Since coming to Westmont, Professor Tro has been awarded grants from the American Chemical Society Petroleum Research Fund, from Research Corporation, and from the National Science Foundation to study the dynamics of various processes occurring in thin ad-layer films adsorbed on dielectric surfaces. He has been honored as Westmont's outstanding teacher of the year three times and has also received the college's outstanding researcher of the year

award. Professor Tro lives in Santa Barbara with his wife, Ann, and their four children, Michael, Ali, Kyle, and Kaden. In his leisure time, Professor Tro enjoys mountain biking, surfing, reading to his children, and being outdoors with his family.

Brief Contents

Preface	20
1 The Chemical World	36
2 Measurement and Problem Solving	46
3 Matter and Energy	90
4 Atoms and Elements	128
5 Molecules and Compounds	162
6 Chemical Composition	200
7 Chemical Reactions	238
8 Quantities in Chemical Reactions	282
9 Electrons in Atoms and the Periodic Table	318
10 Chemical Bonding	358
11 Gases	392
12 Liquids, Solids, and Intermolecular Forces	444
13 Solutions	480
14 Acids and Bases	520
15 Chemical Equilibrium	562
16 Oxidation and Reduction	608
17 Radioactivity and Nuclear Chemistry	644
Appendix: Mathematics Review	MR-1
Glossary	G-1
Answers to Odd-Numbered Exercises	A-1
Photo Credits	PC-1
Index	I-1

Contents

Preface 20

1 The Chemical World 36

1.1	Soda Pop Fizz	37
1.2	Chemicals Compose Ordinary Things	39
1.3	All Things Are Made of Atoms and Molecules	39
1.4	The Scientific Method: How Chemists Think	40
	EVERYDAY CHEMISTRY <i>Combustion and the Scientific Method</i>	42
1.5	A Beginning Chemist: How to Succeed	42
CHAPTER IN REVIEW		43
KEY TERMS		44
EXERCISES		44

2 Measurement and Problem Solving 46

2.1	Measuring Global Temperatures	47
2.2	Scientific Notation: Writing Large and Small Numbers	47
2.3	Significant Figures: Writing Numbers to Reflect Precision	50
	Counting Significant Figures 51	
	Exact Numbers 52	
	CHEMISTRY IN THE MEDIA <i>The COBE Satellite and Very Precise Measurements That Illuminate Our Cosmic Past</i>	53
2.4	Significant Figures in Calculations	54
	Multiplication and Division 54	
	Rounding 54	
	Addition and Subtraction 55	
	Calculations Involving Both Multiplication/Division and Addition/Subtraction 56	
2.5	The Basic Units of Measurement	58
	The Base Units 58	
	Prefix Multipliers 59	
	Derived Units 60	
2.6	Problem Solving and Unit Conversion	61
	Converting Between Units 61	
	General Problem-Solving Strategy 63	

	Problem-Solving Procedure Solving Unit Conversion Problems	64
2.7	Solving Multistep Unit Conversion Problems	65
2.8	Units Raised to a Power	67
	CHEMISTRY AND HEALTH <i>Drug Dosage</i>	68
2.9	Density	70
	Calculating Density 70	
	Density as a Conversion Factor 71	
	CHEMISTRY AND HEALTH <i>Density, Cholesterol, and Heart Disease</i>	73
2.10	Numerical Problem-Solving Strategies and the Solution Map	73
	Problem-Solving Procedure Solving Numerical Problems	74
CHAPTER IN REVIEW		75
KEY TERMS		81
EXERCISES		81

3 Matter and Energy

3.1	In Your Room	91
3.2	What Is Matter?	91
3.3	Classifying Matter According to Its State: Solid, Liquid, and Gas	93
3.4	Classifying Matter According to Its Composition: Elements, Compounds, and Mixtures	94
3.5	Differences in Matter: Physical and Chemical Properties	97
3.6	Changes in Matter: Physical and Chemical Changes	99
	Separating Mixtures Through Physical Changes	101
3.7	Conservation of Mass: There Is No New Matter	101
3.8	Energy	102
	CHEMISTRY IN THE ENVIRONMENT	
	<i>Getting Energy out of Nothing?</i>	103
	Units of Energy	103
3.9	Energy and Chemical and Physical Change	105
3.10	Temperature: Random Motion of Molecules and Atoms	106
3.11	Temperature Changes: Heat Capacity	110
	EVERYDAY CHEMISTRY <i>Coolers, Camping, and the Heat Capacity of Water</i>	111

3.12	Energy and Heat Capacity Calculations	111
	CHAPTER IN REVIEW	115
	KEY TERMS	120
	EXERCISES	120

4 Atoms and Elements

4.1	Experiencing Atoms at Tiburon	129
4.2	Indivisible: The Atomic Theory	130
	EVERYDAY CHEMISTRY <i>Atoms and Humans</i>	131
4.3	The Nuclear Atom	131
4.4	The Properties of Protons, Neutrons, and Electrons	133
	EVERYDAY CHEMISTRY <i>Solid Matter?</i>	134
4.5	Elements: Defined by Their Numbers of Protons	135
4.6	Looking for Patterns: The Periodic Law and the Periodic Table	138
4.7	Ions: Losing and Gaining Electrons	142
	Ions and the Periodic Table	143
4.8	Isotopes: When the Number of Neutrons Varies	145
4.9	Atomic Mass: The Average Mass of an Element's Atoms	147
	CHEMISTRY IN THE ENVIRONMENT	
	<i>Radioactive Isotopes at Hanford, Washington</i>	148
	CHAPTER IN REVIEW	150
	KEY TERMS	153
	EXERCISES	153

5 Molecules and Compounds

5.1	Sugar and Salt	163
5.2	Compounds Display Constant Composition	164
5.3	Chemical Formulas: How to Represent Compounds	165
	Polyatomic Ions in Chemical Formulas	167
	Types of Chemical Formulas	168
5.4	A Molecular View of Elements and Compounds	169
	Atomic Elements	169
	Molecular Elements	169
	Molecular Compounds	169
	Ionic Compounds	170
5.5	Writing Formulas for Ionic Compounds	172
	Writing Formulas for Ionic Compounds Containing Only Monoatomic Ions	172
	Problem-Solving Procedure Writing Formulas for Ionic Compounds	172

	Writing Formulas for Ionic Compounds Containing Polyatomic Ions	173
5.6	Nomenclature: Naming Compounds	174
5.7	Naming Ionic Compounds	174
	Naming Binary Ionic Compounds Containing a Metal That Forms Only One Type of Cation	175
	Naming Binary Ionic Compounds Containing a Metal That Forms More Than One Type of Cation	176
	Naming Ionic Compounds Containing a Polyatomic Ion	177
	EVERYDAY CHEMISTRY Polyatomic Ions	178
5.8	Naming Molecular Compounds	179
5.9	Naming Acids	180
	Naming Binary Acids	180
	Naming Oxyacids	181
	CHEMISTRY IN THE ENVIRONMENT	
	Acid Rain	182
5.10	Nomenclature Summary	182
	Ionic Compounds	183
	Molecular Compounds	183
	Acids	183
5.11	Formula Mass: The Mass of a Molecule or Formula Unit	184
	CHAPTER IN REVIEW	185
	KEY TERMS	190
	EXERCISES	190

6 Chemical Composition

6.1	How Much Sodium?	201
6.2	Counting Nails by the Pound	202
6.3	Counting Atoms by the Gram	203
	Converting between Moles and Number of Atoms	203
	Converting between Grams and Moles of an Element	204
	Converting between Grams of an Element and Number of Atoms	207
6.4	Counting Molecules by the Gram	208
	Converting between Grams and Moles of a Compound	208
	Converting between Grams of a Compound and Number of Molecules	210
6.5	Chemical Formulas as Conversion Factors	211
	Converting between Grams of a Compound and Moles of a Constituent Element	212
	Converting between Grams of a Compound and Grams of a Constituent Element	213
	CHEMISTRY IN THE ENVIRONMENT	
	Chlorine in Chlorofluorocarbons	215
6.6	Mass Percent Composition of Compounds	216
6.7	Mass Percent Composition from a Chemical Formula	217

	CHEMISTRY AND HEALTH Fluoridation of Drinking Water	219
6.8	Calculating Empirical Formulas for Compounds	219
	Calculating an Empirical Formula from Experimental Data	220
	■ Problem-Solving Procedure Obtaining an Empirical Formula from Experimental Data	221
6.9	Calculating Molecular Formulas for Compounds	222
	CHAPTER IN REVIEW	224
	KEY TERMS	230
	EXERCISES	230

7 Chemical Reactions

7.1	Grade School Volcanoes, Automobiles, and Laundry Detergents	239
7.2	Evidence of a Chemical Reaction	240
7.3	The Chemical Equation	243
7.4	How to Write Balanced Chemical Equations	245
	■ Problem-Solving Procedure Writing Balanced Chemical Equations	246

7.5	Aqueous Solutions and Solubility: Compounds Dissolved in Water Solubility	248
7.6	Precipitation Reactions: Reactions in Aqueous Solution That Form a Solid Predicting Precipitation Reactions	252
	■ Problem-Solving Procedure Writing Equations for Precipitation Reactions	254
7.7	Writing Chemical Equations for Reactions in Solution: Molecular, Complete Ionic, and Net Ionic Equations	255
7.8	Acid–Base and Gas Evolution Reactions Acid–Base (Neutralization) Reactions Gas Evolution Reactions	257
	CHEMISTRY AND HEALTH <i>Neutralizing Excess Stomach Acid</i>	260
7.9	Oxidation–Reduction Reactions Combustion Reactions	260
7.10	Classifying Chemical Reactions Classifying Chemical Reactions by What Atoms Do Classification Flowchart	262
	CHEMISTRY IN THE ENVIRONMENT <i>The Reactions Involved in Ozone Depletion</i>	267
	CHAPTER IN REVIEW	267
	KEY TERMS	273
	EXERCISES	273

8 Quantities in Chemical Reactions

8.1	Climate Change: Too Much Carbon Dioxide	283
8.2	Making Pancakes: Relationships between Ingredients	284
8.3	Making Molecules: Mole-to-Mole Conversions	285
8.4	Making Molecules: Mass-to-Mass Conversions	287
	CHEMISTRY IN THE MEDIA <i>The Controversy over Oxygenated Fuels</i>	288
8.5	More Pancakes: Limiting Reactant, Theoretical Yield, and Percent Yield	291
8.6	Limiting Reactant, Theoretical Yield, and Percent Yield from Initial Masses of Reactants	294
8.7	Enthalpy: A Measure of the Heat Evolved or Absorbed in a Reaction	298
	EVERYDAY CHEMISTRY <i>Bunsen Burners</i> Sign of H_{rxn} 299 Stoichiometry of H_{rxn} 300	299
	CHAPTER IN REVIEW	302
	KEY TERMS	306
	EXERCISES	307

9 Electrons in Atoms and the Periodic Table

9.1	Blimps, Balloons, and Models of the Atom	319
9.2	Light: Electromagnetic Radiation	320
9.3	The Electromagnetic Spectrum	322
	CHEMISTRY AND HEALTH <i>Radiation Treatment for Cancer</i>	324
9.4	The Bohr Model: Atoms with Orbits	325
9.5	The Quantum-Mechanical Model: Atoms with Orbitals Baseball Paths and Electron Probability Maps From Orbits to Orbitals	328
9.6	Quantum-Mechanical Orbitals and Electron Configurations Quantum-Mechanical Orbitals Electron Configurations: How Electrons Occupy Orbitals	329
9.7	Electron Configurations and the Periodic Table	336
9.8	The Explanatory Power of the Quantum-Mechanical Model	339

9.9	Periodic Trends: Atomic Size, Ionization Energy, and Metallic Character	341
	Atomic Size	341
	CHEMISTRY AND HEALTH <i>Pumping Ions: Atomic Size and Nerve Impulses</i>	343
	Ionization Energy	343
	Metallic Character	345
	CHAPTER IN REVIEW	347
	KEY TERMS	350
	EXERCISES	350

10 Chemical Bonding

10.1	Bonding Models and AIDS Drugs	359
10.2	Representing Valence Electrons with Dots	360
10.3	Lewis Structures of Ionic Compounds: Electrons Transferred	361
10.4	Covalent Lewis Structures: Electrons Shared Double and Triple Bonds	363
10.5	Writing Lewis Structures for Covalent Compounds	364
	■ Problem-Solving Procedure Writing Lewis Structures for Covalent Compounds	365
	Writing Lewis Structures for Polyatomic Ions	366
	Exceptions to the Octet Rule	367
10.6	Resonance: Equivalent Lewis Structures for the Same Molecule	368
10.7	Predicting the Shapes of Molecules	369
	CHEMISTRY IN THE ENVIRONMENT <i>The Lewis Structure of Ozone</i>	370
	■ Problem-Solving Procedure Predicting Geometry Using VSEPR Theory	373
	Representing Molecular Geometries on Paper	373
	CHEMISTRY AND HEALTH <i>Foiled by Molecular Shape</i>	374
10.8	Electronegativity and Polarity: Why Oil and Water Don't Mix	375
	Electronegativity	375
	Polar Bonds and Polar Molecules	377
	EVERYDAY CHEMISTRY <i>How Soap Works</i>	379
	CHAPTER IN REVIEW	380
	KEY TERMS	383
	EXERCISES	383

11 Gases

11.1	Extra-Long Straws	393
11.2	Kinetic Molecular Theory: A Model for Gases	394

11.3	Pressure: The Result of Constant Molecular Collisions	396
	Pressure Units	397
	Pressure Unit Conversion	398
11.4	Boyle's Law: Pressure and Volume	399
	EVERYDAY CHEMISTRY <i>Airplane Cabin Pressurization</i>	400
	EVERYDAY CHEMISTRY <i>Extra-Long Snorkels</i>	404
11.5	Charles's Law: Volume and Temperature	405
11.6	The Combined Gas Law: Pressure, Volume, and Temperature	409
11.7	Avogadro's Law: Volume and Moles	411
11.8	The Ideal Gas Law: Pressure, Volume, Temperature, and Moles	413
	Molar Mass of a Gas from the Ideal Gas Law	417
11.9	Mixtures of Gases: Why Deep-Sea Divers Breathe a Mixture of Helium and Oxygen	419
	Deep-Sea Diving and Partial Pressure	421
	Collecting Gases over Water	422
11.10	Gases in Chemical Reactions	423
	Molar Volume at Standard Temperature and Pressure	426
	CHEMISTRY IN THE ENVIRONMENT <i>Air Pollution</i>	428
	CHAPTER IN REVIEW	429
	KEY TERMS	434
	EXERCISES	434

12 Liquids, Solids, and Intermolecular Forces 444

- 12.1 Interactions between Molecules 445
- 12.2 Properties of Liquids and Solids 446
- 12.3 Intermolecular Forces in Action: Surface Tension and Viscosity 447
 - Surface Tension 448
 - Viscosity 448
- EVERYDAY CHEMISTRY** *Why Are Water Drops Spherical?* 449
- 12.4 Evaporation and Condensation 449
 - Boiling 451
 - Energetics of Evaporation and Condensation 452
 - Heat of Vaporization 453
- 12.5 Melting, Freezing, and Sublimation 454
 - Energetics of Melting and Freezing 455
 - Heat of Fusion 455
 - Sublimation 457
- 12.6 Types of Intermolecular Forces: Dispersion, Dipole–Dipole, Hydrogen Bonding, and Ion–Dipole 459
 - Dispersion Force 459

- Dipole–Dipole Force 460
- Hydrogen Bonding 462
- Ion–Dipole Force 463

CHEMISTRY AND HEALTH *Hydrogen Bonding in DNA* 464

- 12.7 Types of Crystalline Solids: Molecular, Ionic, and Atomic 466
 - Molecular Solids 466
 - Ionic Solids 467
 - Atomic Solids 467
- 12.8 Water: A Remarkable Molecule 468
 - CHEMISTRY IN THE ENVIRONMENT** *Water Pollution* 469
- CHAPTER IN REVIEW 470
- KEY TERMS 474
- EXERCISES 474

13 Solutions 480

- 13.1 Tragedy in Cameroon 481
- 13.2 Solutions: Homogeneous Mixtures 482
- 13.3 Solutions of Solids Dissolved in Water: How to Make Rock Candy 483
 - Solubility and Saturation 484
 - Electrolyte Solutions: Dissolved Ionic Solids 485
 - How Solubility Varies with Temperature 486
 - Rock Candy 486
- 13.4 Solutions of Gases in Water: How Soda Pop Gets Its Fizz 486
- 13.5 Specifying Solution Concentration: Mass Percent 488
 - Mass Percent 488
 - Using Mass Percent in Calculations 489
- 13.6 Specifying Solution Concentration: Molarity 491
 - CHEMISTRY IN THE ENVIRONMENT** *The Dirty Dozen* 492
 - Using Molarity in Calculations 493
 - Ion Concentrations 495
- 13.7 Solution Dilution 495
- 13.8 Solution Stoichiometry 497
- 13.9 Freezing Point Depression and Boiling Point Elevation: Making Water Freeze Colder and Boil Hotter 500
 - Freezing Point Depression 500
 - EVERYDAY CHEMISTRY** *Antifreeze in Frogs* 502
 - Boiling Point Elevation 502
- 13.10 Osmosis: Why Drinking Salt Water Causes Dehydration 504
 - CHEMISTRY AND HEALTH** *Solutions in Medicine* 505
- CHAPTER IN REVIEW 506
- KEY TERMS 512
- EXERCISES 512

14 Acids and Bases 520

- 14.1 Sour Patch Kids and International Spy Movies 521
- 14.2 Acids: Properties and Examples 522
- 14.3 Bases: Properties and Examples 523
- 14.4 Molecular Definitions of Acids and Bases 524
 - The Arrhenius Definition 524
 - The Brønsted–Lowry Definition 525
- 14.5 Reactions of Acids and Bases 527
 - Neutralization Reactions 527
 - Acid Reactions 528
 - EVERYDAY CHEMISTRY** *What Is in My Antacid?* 530
 - Base Reactions 530
- 14.6 Acid–Base Titration: A Way to Quantify the Amount of Acid or Base in a Solution 530
- 14.7 Strong and Weak Acids and Bases 533
 - Strong Acids 533
 - Weak Acids 534
 - Strong Bases 537
 - Weak Bases 537
- 14.8 Water: Acid and Base in One 538
- 14.9 The pH and pOH Scales: Ways to Express Acidity and Basicity 541

- Calculating pH from $[H_3O^+]$ 542
- Calculating $[H_3O^+]$ from pH 543
- The pOH Scale 544

To the Student

This book is for *you*, and every text feature is meant to help you learn. I have two main goals for you in this course: to see chemistry as you never have before and to develop the problem-solving skills you need to succeed in chemistry.

I want you to experience chemistry in a new way. I have written each chapter to show you that chemistry is not just something that happens in a laboratory; chemistry surrounds you at every moment. I have worked with several outstanding artists to develop photographs and art that will help you visualize the molecular world. From the opening example to the closing chapter, you will *see* chemistry. My hope is that when you finish this course, you will think differently about your world because you understand the molecular interactions that underlie everything around you.

My second goal is for you to develop problem-solving skills. No one succeeds in chemistry—or in life, really—without the ability to solve problems. I can't give you a formula for problem solving, but I can give you strategies that will help you develop the *chemical intuition* you need to understand chemical reasoning.

Look for several recurring structures throughout this book designed to help you master problem solving. The most important ones are (1) a four-step process (Sort, Strategize, Solve, and Check) designed to help you learn how to solve problems; (2) the solution map, a visual aid that helps you navigate your way through problems; (3) the two-column Examples, in which the left column explains in clear and simple language the purpose of each step of the solution shown in the right column; and (4) the three-column Examples, which describe a problem-solving procedure while demonstrating how it is applied to two different Examples. In addition, you will find a For More Practice feature at the end of each worked Example that directs you to the end-of-chapter problems that provide more opportunity to practice the skill(s) covered in the Example. In this edition, I have added a new tool for you at the end of each chapter: a Self-Assessment Quiz. These quizzes are designed to help you test yourself on the core concepts and skills of each chapter. You can also use them as you prepare for exams. Before an exam, take the quiz associated with each chapter that the exam will cover. The questions you miss on the quiz will reveal the areas you need to spend the most time studying.

Lastly, I hope this book leaves you with the knowledge that chemistry is *not* reserved only for those with some superhuman intelligence level. With the right amount of effort and some clear guidance, anyone can master chemistry, including you.

Sincerely,

Nivaldo J. Tro
tro@westmont.edu

To the Instructor

I thank all of you who have used any of the first four editions of *Introductory Chemistry*—you have made this book the most widely selling book in its market, and for that I am extremely grateful. The preparation of the fifth edition has enabled me to continue to refine the book to meet its fundamental purpose: teaching chemical skills in the context of relevance.

Introductory Chemistry is designed for a one-semester, college-level, introductory or preparatory chemistry course. Students taking this course need to develop problem-solving skills—but they also must see *why* these skills are important to them and to their world. *Introductory Chemistry* extends chemistry from the laboratory to the student's world. It motivates students to learn chemistry by demonstrating the role it plays in their daily lives.

This is a visual book. Wherever possible, I have used images to help communicate the subject. In developing chemical principles, for example, I worked with several artists to develop multipart images that show the connection between everyday processes visible to the eye and the molecular interactions responsible for those processes. This art has been further refined and improved in the fifth edition, making the visual impact sharper and more targeted to student learning. For example, you will note a hierarchical system of labeling in many of the images: The white-boxed labels are the most important, the tan-tint boxes are the second most important, and unboxed labels are the third most important. This allows me to treat related labels and annotations within an image in the same way, so that the relationships between them are immediately evident. My intent is to create an art program that teaches and that presents complex information clearly and concisely. Many of the illustrations showing molecular depictions of a real-world object or process have three parts: macroscopic (what we can see with our eyes); molecular and atomic (space-filling models that depict what the molecules and atoms are doing); and symbolic (how chemists represent the molecular and atomic world). The goal is for the student to begin to see the connections between the macroscopic world, the molecular world, and the representation of the molecular world with symbols and formulas.

I have also refined the problem-solving pedagogy to include four steps: Sort, Strategize, Solve, and Check. The *solution map*, which has been part of this book since the first edition, is now part of the *Strategize* step. This four-step procedure is meant to guide students as they learn chemical problem solving. Extensive flowcharts are also incorporated throughout the book, allowing students to visualize the organization of chemical ideas and concepts. The color scheme used in both the solution maps and the flowcharts is designed to have pedagogical value. More specifically, the solution maps utilize the colors of the visible spectrum—always in the same order, from violet to red.

Throughout the worked Examples in this book, I use a *two- or three-column* layout in which students learn a general procedure for solving problems of a particular type as they see this procedure applied to one or two worked Examples. In this format, the *explanation* of how to solve a problem is placed directly beside the actual steps in the *solution* of the problem. Many of you have said that you use a similar technique in lecture and office hours. Since students have specifically asked for connections between Examples and end-of-chapter problems, I include a For More Practice feature at the end of each worked Example that lists the review examples and end-of-chapter problems that provide additional opportunities to practice the skill(s) covered in the Example.

A successful new feature in the second edition was the Conceptual Checkpoints, a series of short questions that students can use to test their mastery of key concepts as they read through a chapter. Emphasizing understanding rather than calculation, they are designed to be easy to answer if the student has grasped the essential concept but difficult if he or she has not. Your positive remarks on this new feature prompted me to continue adding more of these to the fifth edition, including questions that highlight visualization of the molecular world.

This edition has allowed me to add four new global features to the book: Learning Outcomes (LOs), Group Questions, Self-Assessment Quizzes, and Interactive Worked Examples. You will find the learning outcomes underneath most section heads—many of the LOs are repeated in the end of chapter material with an associated worked example. You will find the Group Questions following the chapter exercises. You can assign these as homework if you would like, but you can also use them as in class activities to encourage active learning and peer-to-peer engagement. The Self-Assessment Quizzes are at the very beginning of the chapter review material. These quizzes are designed so that students can test themselves on the core concepts and skills of each chapter. I encourage my students to use these quizzes as they prepare for exams. For example, if my exam covers Chapters 5–8, I assign the quizzes for those chapters for credit (you can do this in MasteringChemistry[®]). Students then get a sort of pretest on the core material that will be on the exam. The Interactive Worked Examples are a new digital asset that we created for this edition. These examples are available in MasteringChemistry[®] and at the following website: www.pearsonglobaleditions.com/tro. Each Interactive Worked Example walks the student through a key example from the book (the examples that have been made interactive are marked with a play icon in the book). At a key point in the Interactive Worked Example, the video pauses and the student is asked a question. These questions are designed to encourage students to be active in the learning process. Once the student answers the question, the video resumes to the end. A follow-up question can then be assigned for credit in MasteringChemistry[®].

My goal in this new edition is to continue to help you make learning a more active (rather than passive) process for your students. The new Group Questions can help make your classroom more active. The new Conceptual Checkpoints, along with the new Self-Assessment Quizzes, make reading the book a more active process. The addition of the Interactive Worked Examples makes the media experience active as well. Research consistently shows that students learn better when they are actively engaged in the process. I hope the tools that I have provided here continue to aid you in teaching your students more effectively. Please feel free to e-mail me with any questions or comments you might have. I look forward to hearing from you as you use this book in your course.

Sincerely,

Nivaldo J. Tro
tro@westmont.edu

Preface

New to This Edition

NEW! Key Learning Outcomes have been added to each chapter section. Learning outcomes correlate to the Chemical Skills and Examples in the end-of-chapter material and to MasteringChemistry[®]. Each section (after the introductory sections) has at least one learning outcome that summarizes the key learning objective of the material to help students focus their learning and assess their progress.

NEW! Self-Assessment Quizzes. Each chapter contains a 10-15 question multiple choice self-assessment quiz. These quizzes are designed to help students review the chapter material and prepare for exams.

NEW! 3–4 Questions for Group Work have been added to the end-of-chapter problems in each chapter to facilitate guided-inquiry learning both inside and outside the classroom.

NEW! 20 Interactive Worked Examples. Interactive Worked Examples are digital versions of the text's worked examples that make Tro's unique problem-solving strategies interactive, bringing his award-winning teaching directly to all students using his text. In these digital versions, students are instructed how to break down problems using Tro's proven Sort, Strategize, Solve, and Check technique. The Interactive Worked Examples can be accessed by scanning the QR code on the back cover allowing students to quickly access an office-hour type experience.

These problems are incorporated into MasteringChemistry[®] as assignable tutorial activities and are also available for download and distribution via the Instructor Resource Center (IRC) for instructional and classroom use.

More than 20 New Conceptual Checkpoints are in the fifth edition and are designed to make reading the book an active process. The checkpoints encourage students to stop and think about the ideas just presented before moving on and also provide a tool for self-assessment.

Interest Box Questions are now numbered in the Everyday Chemistry, Chemistry in the Environment, Chemistry in the Media, and Chemistry and Health boxes so that they can easily be assigned.

Cross-references to the Math Appendix, now indicated by a +/– icon in the fifth edition, are more visible and allow students to locate additional resources more easily.

Additional Features

- **A student-friendly, step-by-step, problem-solving approach is presented throughout** the book (fully introduced and explained in Chapter 2): Tro's unique two-and three-column examples help guide students through problems

step-by-step using Sort, Strategize, Solve, and Check. “Relationships Used” are also included in most worked examples.

- **In all chapters, figure labels follow a consistent hierarchy.** Three types of labels appear in the art. The most important information is in white shadow boxes; the second most important is in tinted boxes (with no border); and the third level of labels is unboxed.
- **All figures and figure captions have been carefully examined, and images and labels have been replaced or revised when needed** to improve the teaching focus of the art program.
- **Every end-of-chapter question has been carefully reviewed** by the author and editor and accordingly revised and/or replaced when necessary.

Some significant improvements have been made to key content areas as well. These include:

- To reflect recent changes made by IUPAC that introduce more uncertainty in atomic masses, the periodic tables on the inside front cover of the book and all subsequent periodic tables in the text containing atomic masses now include the modified following atomic masses: Li 6.94; S 32.06; Ge 72.63; Se 78.97; and Mo 95.95.
- In Chapter 1, *The Chemical World*, key wording about chemicals as well as the definition of chemistry have been changed to more strongly reflect particles and properties connection.
- In Section 2.3, *Significant Figures: Writing Numbers to Reflect Precision*, clarification has been added about trailing zeros in the significant digits discussion in Section 2.3.
- In Section 3.8, *Energy*, a new schematic has been added to the photo of the dam to better illustrate the concept of potential energy, and there is a new figure, Figure 3.15, *Potential Energy of Raised Weight*.
- Several new subheadings have been added to Chapter 5 to help students better navigate the material; Table 5.3, *Some Common Polyatomic Ions*, has been moved to an earlier place in Chapter 5; and fourth edition Example 5.7, *Writing Formulas for Ionic Compounds*, has been replaced with fifth edition Example 5.7, *Writing Formulas for Ionic Compounds Containing Polyatomic Ions*.
- In Chapter 6, Chemistry in the Environment box *Chlorine in Chlorofluorocarbons* has been revised and updated. Figure 6.3, *The Ozone Shield*, has been updated and revised to include a molecular perspective and be a better teaching tool and Figure 6.4, *Growth of the Ozone Hole*, has been updated with 2010 data.
- The transition between balancing chemical equations to investigating types of reactions at the beginning of Section 7.5, *Aqueous Solutions and Solubility: Compounds Dissolved in Water*, has been sharpened to help students relate Section 7.5 to the previous section.
- Figure 7.7, *Solubility Rules Flowchart*, has been edited so that Ca^{2+} , Sr^{2+} , and Ba^{2+} are in periodic table order throughout for easier memorization.
- The phrase “global warming” has been replaced with “climate change” throughout Chapter 8, *Quantities in Chemical Reactions*, and Figure 8.2, *Climate Change*, has been updated to include global temperature data for 2011 and 2012.
- In Section 9.1, *Blimps, Balloons, and Models of the Atom*, more emphasis has been placed on the relationship between atomic structure and properties in the discussion of helium and hydrogen.
- In Section 9.4, *The Bohr Model: Atoms with Orbits*, new introductory material has been added to emphasize the relationship between light emission and electron motion.

- Orbital representations in figures throughout Chapter 9 have been modified to be more accurate.
- Throughout Chapter 10, *Chemical Bonding*, the term *Lewis theory* has been replaced with *Lewis model*.
- In Chapter 11, *Gases*, an update about how newer jets pressurize their cabins has been added to the Everyday Chemistry box, *Airplane Cabin Pressurization*, and Table 11.5, *Changes in Pollutant Levels for Major U.S. Cities, 1980–2010*, has been updated to include the most recent available data.
- Content has been revised and material has been added to improve clarity in the subsection entitled *Surface Tension* in Section 12.3, *Intermolecular Forces in Action: Surface Tension and Viscosity*. Also, the caption for Figure 12.5, *Origin of Surface Tension*, has been revised and the phase inset figures in Figure 12.16, *Heating Curve during Melting*, have been corrected to show the phases more accurately.
- The new title for Section 12.6, *Types of Intermolecular Forces: Dispersion, Dipole–Dipole, Hydrogen Bonding, and Ion–Dipole*, reflects new content and new material about ion–dipole forces, including new Figure 12.25, *Ion–Dipole Forces*. Also, ion–dipole forces have been added to Table 12.5, *Types of Intermolecular Forces*, and the art in the table now depicts space-filling models of the molecules.
- Content in Section 13.3, *Solutions of Solids Dissolved in Water: How to Make Rock Candy*, links the discussion of solvent–solute interactions to the discussion of intermolecular forces in Chapter 12.
- Figure 14.19, *How Buffers Resist pH Change*, has been changed to be more useful and easier for students to understand.
- Section 14.11, *Acid Rain: An Environmental Problem Related to Fossil Fuel Combustion*, has been cut.
- New, brief introductory statements have been added to Section 15.6, *Calculating and Using Equilibrium Constants*, and in Section 15.10, *The Effect of a Temperature Change on Equilibrium*, numbers that indicate sequence have been added to the three unnumbered equations that indicate how equilibrium changes when heat is added or removed from exothermic and endothermic reactions.
- The title of Figure 16.12, *Used Voltaic Cell*, has been corrected, and the art has been slightly modified.
- Figure 16.18, *Schematic Diagram of a Fuel-Cell Breathalyzer*, in the box Everyday Chemistry: *The Fuel-Cell Breathalyzer* has also been modified for accuracy.

The design and features of this text have been conceived to work together as an integrated whole with a single purpose: to help students understand chemical principles and to master problem-solving skills in a context of relevance. Students must be able not only to grasp chemical concepts and solve chemical problems, but also to understand how those concepts and problem-solving skills are relevant to their other courses, their eventual career paths, and their daily lives.

Teaching Principles

The development of basic chemical principles—such as those of atomic structure, chemical bonding, chemical reactions, and the gas laws—is one of the main goals of this text. Students must acquire a firm grasp of these principles in order to succeed in the general chemistry sequence or the chemistry courses that support the

allied health curriculum. To that end, the book integrates qualitative and quantitative material and proceeds from concrete concepts to more abstract ones.

Organization of the Text

The main divergence in topic ordering among instructors teaching introductory and preparatory chemistry courses is the placement of electronic structure and chemical bonding. Should these topics come early, at the point where models for the atom are being discussed? Or should they come later, after the student has been exposed to chemical compounds and chemical reactions? Early placement gives students a theoretical framework within which they can understand compounds and reactions. However, it also presents students with abstract models before they understand why they are necessary. I have chosen a later placement for the following reasons:

- 1. A later placement provides greater flexibility.** An instructor who wants to cover atomic theory and bonding earlier can simply cover Chapters 9 and 10 after Chapter 4. However, if atomic theory and bonding were placed earlier, it would be more difficult for the instructor to skip these chapters and come back to them later.
- 2. A later placement allows earlier coverage of topics that students can more easily visualize.** Coverage of abstract topics too early in a course can lose some students. Chemical compounds and chemical reactions are more tangible than atomic orbitals, and their relevance is easier to demonstrate to the beginning student.
- 3. A later placement gives students a reason to learn an abstract theory.** Once students learn about compounds and reactions, they are more easily motivated to learn a theory that explains compounds and reactions in terms of underlying causes.
- 4. A later placement follows the scientific method.** In science, we normally make observations, form laws, and then build models or theories that explain our observations and laws. A later placement follows this ordering.

Nonetheless, I know that every course is unique and that each instructor chooses to cover topics in his or her own way. Consequently, I have written each chapter for maximum flexibility in topic ordering. In addition, the book is offered in two formats. The full version, *Introductory Chemistry*, contains 19 chapters, including organic chemistry and biochemistry. The shorter version, *Introductory Chemistry Essentials*, contains 17 chapters and omits these topics.

Print and Media Resources

For the Instructor

MasteringChemistry®

MasteringChemistry® is the first adaptive-learning online homework and tutorial system. Instructors can create online assignments for their students by choosing from a wide range of items, including end-of-chapter problems and research-enhanced tutorials. Assignments are automatically graded with up-to-date diagnostic information, helping instructors pinpoint where students struggle either individually or for the class as a whole. These questions can be used asynchro-

nously outside of class as well. For the fifth edition, 20 new Interactive Worked Examples have been added to the Study Area. Icons appear next to examples indicating that a digital version is available.

NEW! Learning Catalytics™

Learning Catalytics™ is a “bring your own device” student engagement, assessment, and classroom intelligence system. With Learning Catalytics™ you can:

- Assess students in real time, using open-ended tasks to probe student understanding.
- Understand immediately where students are and adjust your lecture accordingly.
- Improve your students’ critical-thinking skills.
- Access rich analytics to understand student performance.
- Add your own questions to make Learning Catalytics™ fits your course exactly.
- Manage student interactions with intelligent grouping and timing.

Learning Catalytics™ is a technology that has grown out of twenty years of cutting edge research, innovation, and implementation of interactive teaching and peer instruction. Learning Catalytics™ is included with the purchase of Mastering with eText. Michael Everest of Westmont College has written a set of questions in Learning Catalytics™ that correlates directly to the topics and concepts in *Introductory Chemistry*, 5e and encourages group-based inquiry learning.

NEW! Adaptive Follow-up Assignments in MasteringChemistry®

Instructors now have the ability to assign adaptive follow-up assignments to students. Content delivered to students as part of adaptive learning will be automatically personalized for each individual based on strengths and weaknesses identified by his or her performance on Mastering parent assignments.

NEW! Dynamic Study Modules, designed to enable students to study effectively on their own, as well as help students quickly access and learn the nomenclature they need to be more successful in chemistry. These modules can be accessed on smartphones, tablets, and computers and results can be tracked in the MasteringChemistry® Gradebook. How it works:

1. Students receive an initial set of questions and benefit from the metacognition involved with asking them to indicate how confident they are with their answer.
2. After answering each set of questions, students review their answers.
3. Each question has explanation material that reinforces the correct answer response and addresses the misconceptions found in the wrong answer choices.
4. Once students review the explanations, they are presented with a new set of questions. Students cycle through this dynamic process of test-learn-retest until they achieve mastery of the material.

Instructor’s Manual by Mark Ott of Jackson Community College, and Matthew Johll of Illinois Valley Community College. This manual features lecture outlines with presentation suggestions, teaching tips, suggested in-class demonstrations, and topics for classroom discussion. It also contains full solutions to all the end-of-chapter problems from the text.

TestGen Testbank by Michael Hauser of St. Louis Community College. This download-only test bank includes more than 2000 questions and is available on the Instructor's Resource Center.

Instructor's Resource Materials This resource provides an integrated collection of resources to help instructors make efficient and effective use of their time and is available for download from the Instructor's Resource Center. The package features the following:

- All the art from the text, including figures and tables in JPG and PDF formats; movies; animations; Interactive Molecules; and the Instructor's Resource Manual files.
- Four PowerPoint™ presentations: (1) a lecture outline presentation for each chapter, (2) all the art from the text, (3) the worked Examples from the text, and (4) clicker questions.
- TestGen, a computerized version of the Test Item File that allows instructors to create and tailor exams to fit their needs.

Instructor's Guide for Student's Guided Activity Workbook by Michael Everest of Westmont College. This manual features assessable outcomes, facilitation tips, and demonstration suggestions to help integrate guided-inquiry learning in the classroom and is available for download on the Instructor's Resource Center.

For the Student

Pearson eText offers students the power to create notes, highlight text in different colors, create bookmarks, zoom, and view single or multiple pages. Access to the Pearson eText for *Introductory Chemistry*, Fifth Edition, is available for purchase within MasteringChemistry®.

Study Guide (0-321-94905-6) by Donna Friedman of St. Louis Community College—Florissant Valley. Each chapter of the Study Guide contains an overview, key learning outcomes, a chapter review, as well as practice problems for each major concept in the text. Each chapter is followed by two or three self-tests with answers so students can check their work.

NEW! *Student's Guided Activity Workbook (0-321-94908-0)* by Michael Everest of Westmont College. This set of guided-inquiry activities enables students to construct chemical knowledge and related skills on their own. Each activity begins by presenting some information (as a table, figure, graph, text, etc.). Students, working in groups of 3–4, answer questions designed to draw their attention to the important concepts and trends exemplified in the information. Through their active participation in the learning process, students learn not only chemistry, but also a wide range of additional skills such as information processing, problem solving, deductive reasoning, and teamwork. There are approximately three complete worksheets to accompany each chapter in *Introductory Chemistry*, and each worksheet should take students from 50–60 minutes to complete. The activities can be used in place of, or as a supplement to, a lecture-based pedagogy. This supplement is available through Pearson Custom Library www.pearsoncustomlibrary.com.
