

# COLLEGE ALGEBRA

I N C O N T E X T

with applications for the managerial,  
life, & social sciences

FIFTH EDITION

HARSHBARGER YOCCO

Available in MyMathLab<sup>®</sup> for your College Algebra Course

## Achieve Your Potential

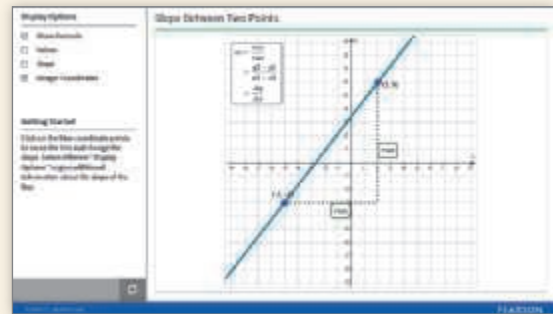

Success in math can make a difference in your life. MyMathLab is a learning experience with resources to help you Achieve Your Potential in this course and beyond. MyMathLab will help you learn the new skills required and also help you learn the bigger concepts and make connections for future courses and careers.

## Visualization and Conceptual Understanding

These MyMathLab resources will help you think visually and connect the concepts.

### NEW! Guided Visualizations

These engaging, interactive figures bring mathematical concepts to life, helping students visualize the concepts through directed explorations and purposeful manipulation. *Guided Visualizations* are assignable in MyMathLab and encourage active learning, critical thinking, and conceptual learning.

### Video Assessment Exercises

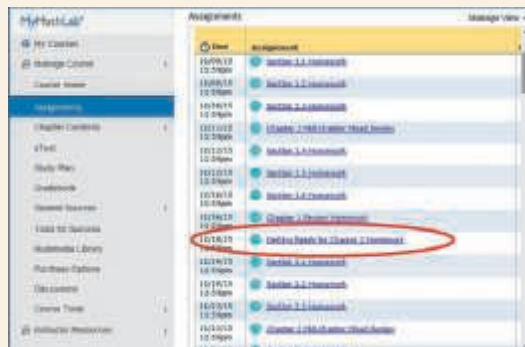

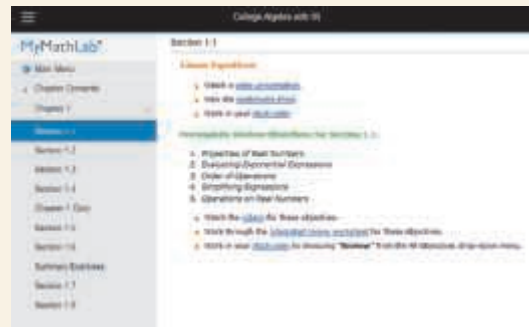

Now assignable in MyMathLab, these videos provide a detailed walk-through of the solution process for key topics. Exercises correlated to the videos check for conceptual understanding.

## Preparedness and Study Skills

MyMathLab® gives access to many learning resources that refresh knowledge of topics previously learned. An *Integrated Review* MyMathLab course, *Getting Ready* material, and *Note-taking Guide* are some of the tools available.

### Integrated Review Course

This new type of MyMathLab course offers a complete college algebra course with select topics from developmental algebra. Each chapter begins with a *Skills Check* assignment to pinpoint which prerequisite topics, if any, need review. A personalized review homework assignment is automatically generated and provides extra support. Additional review materials (worksheets, videos, and more) are available at the start of each chapter.

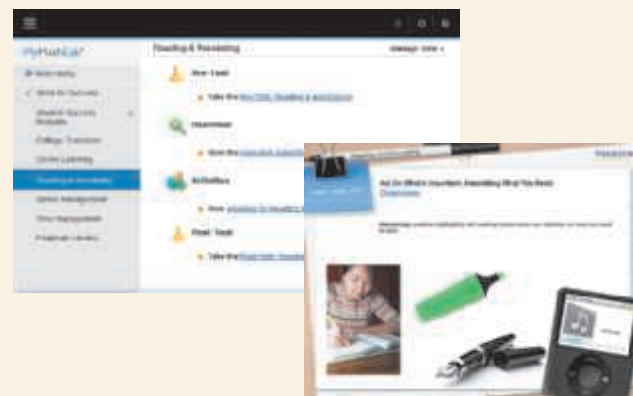

### Getting Ready

Students refresh prerequisite topics through skill review quizzes and personalized homework integrated in MyMathLab. With *Getting Ready* content in MyMathLab students get just the help they need to be prepared to learn the new material.

### Skills for Success Modules

*Skills for Success* modules help foster success in collegiate courses and prepare students for future professions. Topics such as “Time Management,” “Stress Management,” and “Financial Literacy” are available within the MyMathLab course.

## Get the most out of MyMathLab®

MyMathLab, Pearson's online learning management system, creates personalized experiences for students and provides powerful tools for instructors. With a wealth of tested and proven resources, each course can be tailored to fit your specific needs. Talk to your Pearson Representative about ways to integrate MyMathLab into your course for the best results.

### Data-Driven Reporting for Instructors

- MyMathLab's comprehensive online gradebook automatically tracks students' results to tests, quizzes, homework, and work in the study plan.
- The Reporting Dashboard, found under More Gradebook Tools, makes it easier than ever to identify topics where students are struggling, or specific students who may need extra help.

### Learning in Any Environment

- Because classroom formats and student needs continually change and evolve, MyMathLab has built-in flexibility to accommodate various course designs and formats.
- With a new, streamlined, mobile-friendly design, students and instructors can access courses from most mobile devices to work on exercises and review completed assignments.

Preface viii  
To the Student xv

## CHAPTER 1 Functions, Graphs, and Models; Linear Functions

1

### Algebra Toolbox 2

Sets ■ The Real Numbers ■ Inequalities and Intervals on the Number Line  
■ Algebraic Expressions ■ Polynomials ■ Operations with Polynomials  
■ Removing Parentheses ■ Dividing Polynomials by Monomials ■ The  
Coordinate System ■ Subscripts

### 1.1 Functions and Models 10

Function Definitions ■ Domains and Ranges ■ Tests for Functions ■ Vertical  
Line Test ■ Function Notation ■ Mathematical Models ■ Aligning Data

### 1.2 Graphs of Functions 28

Graphs of Functions ■ Graphing with Technology ■ Determining Viewing  
Windows ■ Graphing Data Points

### 1.3 Linear Functions 42

Linear Functions ■ Intercepts ■ Slope of a Line ■ Slope and  
y-Intercept of a Line ■ Constant Rate of Change ■ Revenue, Cost,  
and Profit ■ Marginal Cost, Revenue, and Profit ■ Special Linear Functions

### 1.4 Equations of Lines 59

Writing Equations of Lines ■ Parallel and Perpendicular Lines ■ Average  
Rate of Change ■ Difference Quotient ■ Approximately Linear Data

Summary 76

Key Concepts and Formulas 76

Chapter 1 Skills Check 79

Chapter 1 Review 80

Group Activities/Extended Applications 82

## CHAPTER 2 Linear Models, Equations, and Inequalities

84

### Algebra Toolbox 85

Properties of Equations ■ Properties of Inequalities ■ Rounding Function  
Coefficients and Constants

### 2.1 Algebraic and Graphical Solution of Linear Equations 92

Algebraic Solution of Linear Equations ■ Solutions, Zeros, and x-Intercepts  
■ Graphical Solution of Linear Equations ■ Literal Equations; Solving an  
Equation for a Specified Linear Variable ■ Direct Variation

### 2.2 Fitting Lines to Data Points: Modeling Linear Functions 105

Exact and Approximate Linear Models ■ Fitting Lines to Data Points; Linear  
Regression ■ Applying Models ■ Goodness of Fit

### 2.3 Systems of Linear Equations in Two Variables 125

System of Equations ■ Graphical Solution of Systems ■ Solution by  
Substitution ■ Solution by Elimination ■ Modeling Systems of Linear  
Equations ■ Dependent and Inconsistent Systems

- 2.4 Solutions of Linear Inequalities** 139  
 Algebraic Solution of Linear Inequalities ■ Graphical Solution of Linear Inequalities ■ Intersection Method ■ x-Intercept Method ■ Double Inequalities
- Summary 150  
 Key Concepts and Formulas 150  
 Chapter 2 Skills Check 153  
 Chapter 2 Review 153  
 Group Activities/Extended Applications 157

## CHAPTER 3 Quadratic, Piecewise-Defined, and Power Functions 159

- Algebra Toolbox** 160  
 Integer Exponents ■ Absolute Value ■ Rational Exponents and Radicals ■ Special Binomial Products and Factoring ■ Complex Numbers
- 3.1 Quadratic Functions; Parabolas** 168  
 Parabolas ■ Vertex Form of a Quadratic Function
- 3.2 Solving Quadratic Equations** 181  
 Factoring Methods ■ Graphical Methods ■ Combining Graphs and Factoring ■ Graphical and Numerical Methods ■ The Square Root Method ■ Completing the Square ■ The Quadratic Formula ■ The Discriminant ■ Aids for Solving Quadratic Equations ■ Equations with Complex Solutions
- 3.3 Piecewise-Defined Functions and Power Functions** 198  
 Piecewise-Defined Functions ■ Absolute Value Function ■ Solving Absolute Value Equations ■ Power Functions ■ Root Functions ■ Reciprocal Function ■ Variation
- 3.4 Quadratic and Power Models** 212  
 Modeling a Quadratic Function from Three Points on Its Graph ■ Modeling with Quadratic Functions ■ Comparison of Linear and Quadratic Models ■ Modeling with Power Functions ■ Comparison of Power and Quadratic Models
- Summary 230  
 Key Concepts and Formulas 230  
 Chapter 3 Skills Check 233  
 Chapter 3 Review 234  
 Group Activities/Extended Applications 237

## CHAPTER 4 Additional Topics with Functions 239

- Algebra Toolbox** 240  
 Linear Functions ■ Quadratic Functions ■ Piecewise-Defined Functions ■ Power Functions ■ Special Power Functions
- 4.1 Transformations of Graphs and Symmetry** 246  
 Shifts of Graphs of Functions ■ Stretching and Compressing Graphs ■ Reflections of Graphs ■ Symmetry; Even and Odd Functions
- 4.2 Combining Functions; Composite Functions** 262  
 Operations with Functions ■ Average Cost ■ Composition of Functions

- 4.3 One-to-One and Inverse Functions** 274  
 Inverse Functions ■ One-to-One Functions ■ Inverse Functions on Limited Domains
- 4.4 Additional Equations and Inequalities** 286  
 Radical Equations; Equations Involving Rational Powers ■ Equations Containing Rational Powers ■ Equations in Quadratic Form ■ Quadratic Inequalities ■ Algebraic Solution of Quadratic Inequalities ■ Graphical Solution of Quadratic Inequalities ■ Power Inequalities ■ Inequalities Involving Absolute Values
- Summary 301  
 Key Concepts and Formulas 301  
 Chapter 4 Skills Check 303  
 Chapter 4 Review 304  
 Group Activities/Extended Applications 306

## CHAPTER 5 Exponential and Logarithmic Functions

308

- Algebra Toolbox** 309  
 Additional Properties of Exponents ■ Real Number Exponents  
 ■ Scientific Notation
- 5.1 Exponential Functions** 313  
 Exponential Functions ■ Transformations of Graphs of Exponential Functions ■ Exponential Growth Models ■ Exponential Decay Models  
 ■ The Number  $e$
- 5.2 Logarithmic Functions; Properties of Logarithms** 326  
 Logarithmic Functions ■ Common Logarithms ■ Natural Logarithms  
 ■ Logarithmic Properties ■ Richter Scale
- 5.3 Exponential and Logarithmic Equations** 343  
 Solving Exponential Equations Using Logarithmic Forms ■ Change of Base ■ Solving Exponential Equations Using Logarithmic Properties  
 ■ Solution of Logarithmic Equations ■ Exponential and Logarithmic Inequalities
- 5.4 Exponential and Logarithmic Models** 358  
 Modeling with Exponential Functions ■ Constant Percent Change in Exponential Models ■ Exponential Models ■ Comparison of Models  
 ■ Logarithmic Models ■ Exponents, Logarithms, and Linear Regression
- 5.5 Exponential Functions and Investing** 374  
 Compound Interest ■ Continuous Compounding and the Number  $e$   
 ■ Present Value of an Investment ■ Investment Models
- 5.6 Annuities; Loan Repayment** 386  
 Future Value of an Annuity ■ Present Value of an Annuity ■ Loan Repayment
- 5.7 Logistic and Gompertz Functions** 396  
 Logistic Functions ■ Gompertz Functions
- Summary 408  
 Key Concepts and Formulas 408  
 Chapter 5 Skills Check 411  
 Chapter 5 Review 412  
 Group Activities/Extended Applications 416

**CHAPTER 6 Higher-Degree Polynomial and Rational Functions****418****Algebra Toolbox** 419

Polynomials ■ Factoring Higher-Degree Polynomials ■ Rational Expressions ■ Multiplying and Dividing Rational Expressions ■ Adding and Subtracting Rational Expressions ■ Simplifying Complex Fractions ■ Division of Polynomials

**6.1 Higher-Degree Polynomial Functions** 427

Cubic Functions ■ Quartic Functions

**6.2 Modeling with Cubic and Quartic Functions** 440

Modeling with Cubic Functions ■ Modeling with Quartic Functions ■ Model Comparisons ■ Third and Fourth Differences

**6.3 Solution of Polynomial Equations** 455

Solving Polynomial Equations by Factoring ■ Solution Using Factoring by Grouping ■ The Root Method ■ Estimating Solutions with Technology

**6.4 Polynomial Equations Continued; Fundamental Theorem of Algebra** 466

Division of Polynomials; Synthetic Division ■ Using Synthetic Division to Solve Cubic Equations ■ Graphs and Solutions ■ Rational Solutions Test ■ Fundamental Theorem of Algebra

**6.5 Rational Functions and Rational Equations** 478

Graphs of Rational Functions ■ Slant Asymptotes and Missing Points ■ Algebraic and Graphical Solution of Rational Equations ■ Inverse Variation

**6.6 Polynomial and Rational Inequalities** 493

Polynomial Inequalities ■ Rational Inequalities

Summary 499

Key Concepts and Formulas 499

Chapter 6 Skills Check 501

Chapter 6 Review 503

Group Activities/Extended Applications 506

**CHAPTER 7 Systems of Equations and Matrices****507****Algebra Toolbox** 508

Proportion ■ Proportional Triples ■ Linear Equations in Three Variables

**7.1 Systems of Linear Equations in Three Variables** 511

Systems in Three Variables ■ Left-to-Right Elimination ■ Modeling Systems of Equations ■ Nonunique Solutions

**7.2 Matrix Solution of Systems of Linear Equations** 521

Matrix Representation of Systems of Equations ■ Echelon Forms of Matrices; Solving Systems with Matrices ■ Gauss–Jordan Elimination ■ Solution with Technology ■ Nonunique Solution ■ Dependent Systems ■ Inconsistent Systems

**7.3 Matrix Operations** 534

Addition and Subtraction of Matrices ■ Multiplication of a Matrix by a Number ■ Matrix Multiplication ■ Multiplication with Technology

- 7.4 Inverse Matrices; Matrix Equations** 549  
 Inverse Matrices ■ Inverses and Technology ■ Encoding and Decoding Messages ■ Matrix Equations ■ Matrix Equations and Technology
- 7.5 Determinants and Cramer's Rule** 562  
 The Determinant of a  $2 \times 2$  Matrix ■ Cramer's Rule ■ The Determinant of a  $3 \times 3$  Matrix ■ Solving Systems of Equations in Three Variables with Cramer's Rule ■ Cramer's Rule with Inconsistent and Dependent Systems
- 7.6 Systems of Nonlinear Equations** 572  
 Algebraic Solution of Nonlinear Systems ■ Graphical Solution of Nonlinear Systems
- Summary 578  
 Key Concepts and Formulas 579  
 Chapter 7 Skills Check 581  
 Chapter 7 Review 582  
 Group Activities/Extended Applications 585

## CHAPTER 8 Special Topics in Algebra

587

- 8.1 Systems of Inequalities** 588  
 Linear Inequalities in Two Variables ■ Systems of Inequalities in Two Variables ■ Systems of Nonlinear Inequalities
- 8.2 Linear Programming: Graphical Methods** 599  
 Linear Programming ■ Solution with Technology
- 8.3 Sequences and Discrete Functions** 610  
 Sequences ■ Arithmetic Sequences ■ Geometric Sequences
- 8.4 Series** 619  
 Finite and Infinite Series ■ Arithmetic Series ■ Geometric Series ■ Infinite Geometric Series
- 8.5 Preparing for Calculus** 627
- 8.6 The Binomial Theorem** 637  
 Binomial Coefficients
- 8.7 Conic Sections: Circles and Parabolas** 641  
 Distance and Midpoint Formulas ■ Circles ■ Parabolas
- 8.8 Conic Sections: Ellipses and Hyperbolas** 649  
 Ellipses ■ Hyperbolas ■ Rectangular Hyperbolas
- Summary 657  
 Key Concepts and Formulas 657  
 Chapter 8 Skills Check 660  
 Chapter 8 Review 662  
 Group Activity/Extended Application 663

**Appendix A Basic Graphing Calculator Guide** 664

**Appendix B Basic Guide to Excel 2010 and Excel 2013** 684

Credits 700

Answers to Selected Exercises A-1

Index I-1

# Preface

*College Algebra in Context* is designed for a course in algebra that is based on data analysis, modeling, and real-life applications from the management, life, and social sciences. The text is intended to show students how to analyze, solve, and interpret problems in this course, in future courses, and in future careers. At the heart of this text is its emphasis on problem solving in meaningful contexts.

The text is application-driven and uses real data problems that motivate interest in the skills and concepts of algebra. Modeling is introduced early, in the discussion of linear functions and in the discussion of quadratic and power functions. Additional models are introduced when exponential, logarithmic, logistic, cubic, and quartic functions are discussed. Mathematical concepts are introduced informally with an emphasis on applications. Each chapter contains real data problems and extended application projects that can be solved by students working collaboratively.

The text features a constructive chapter-opening Algebra Toolbox, which reviews previously learned algebra concepts by presenting the prerequisite skills needed for successful completion of the chapter. In addition, a section on calculus preparation at the end of the text emphasizes how students can use their new knowledge in a variety of calculus courses.

## Changes in the Fifth Edition

We have made a number of changes based on suggestions from users and reviewers of the fourth edition, as well as our own classroom experiences.

- Additional modeling problems that involve decision making and critical thinking have been added throughout the text.
- To keep the applications current, nearly all of the examples and exercises using “date-related” real data have been updated or replaced.
- Over 300 additional algebra skills, examples, and applied exercises have been added.
- More specific Excel steps are presented within the text, with references to Appendix B for more details.
- Excel procedures are given to solve additional types of problems, especially in investment applications in Chapter 5.
- The Excel discussion and figures have been updated to Excel 2013 throughout the text and in Appendix B. Excel 2010 procedures are retained in Appendix B.
- Throughout the text and in Appendix A, the TI graphing calculator graphs have been updated to the latest format (TI-84 Plus Silver with Color).
- Appendix B has been updated to include instructions for Excel 2013 and Excel 2010.
- The MyMathLab course has been expanded to include additional problem types, such as Video Assessment exercises and Guided Visualizations.
- A new *Note-taking Guide*, written by the authors, is available to assist students in taking thorough, organized, and understandable notes during lectures.

To improve the exposition, new content has been added, and the organization of some sections has been changed.

- Multiplying Monomials and Binomials was moved to the Chapter 1 Algebra Toolbox, and Division of Polynomials by Monomials has been added there.
- The discussion of Aligning Data was moved to Section 1.1.

- The discussion of Difference Quotients in Section 1.4 was expanded.
- A new subsection, Rounding Function Coefficients and Constants, which includes a discussion of significant digits, was added to the Chapter 2 Algebra Toolbox.
- A new subsection, Equations in Quadratic Form, was added to Section 4.4.
- A summary table of Transformations of Graphs was added to Section 5.1.
- New graphing calculator and Excel instructions and examples are given for solving investment problems in Section 5.5, Exponential Functions and Investing, and in Section 5.6, Annuities; Loan Repayment.
- A new subsection, Simplifying Complex Fractions, was added to the Chapter 6 Algebra Toolbox.
- Instructions and examples using Excel 2013 to perform matrix operations have been added in Section 7.3.
- Instructions and examples using Excel 2013 to solve systems of linear equations with inverse matrices have been added in Section 7.4.
- A new Section 7.5, Determinants and Cramer's Rule, has been added to Chapter 7.
- A new Section 8.6, The Binomial Theorem, has been added to Chapter 8.
- A new Section 8.7, Conic Sections: Circles and Parabolas, has been added to Chapter 8.
- A new Section 8.8, Conic Sections: Ellipses and Hyperbolas, has been added to Chapter 8.

## Continued Features

Features of the text include the following:

- The development of algebra is motivated by the need to use algebra to find the solutions to **real data–based applications**.  
Real-life problems demonstrate the need for specific algebraic concepts and techniques. Each section begins with a motivational problem couched in a real-life setting. The problem is solved after the necessary skills have been presented in that section. The aim is to prepare students to solve problems of all types by first introducing them to various functions and then encouraging them to take advantage of available technology. Special business and finance models are included to demonstrate the application of functions to the business world.
- **Technology** has been integrated into the text.  
The text discusses the use of graphing calculators and Excel to solve problems, but there are no specific technology requirements. When a new calculator or spreadsheet skill becomes useful in a section, students can find the required keystrokes or commands in the text and in the *Graphing Calculator and Excel<sup>®</sup> Manual*, located within MyMathLab, as well as in Appendixes A and B discussed below. Technology is used to enhance and support learning when appropriate—not to supplant learning.
- The text contains two technology appendixes: a **Basic Graphing Calculator Guide** and a **Basic Guide to Excel 2010 and Excel 2013**. Footnotes throughout the text refer students to these guides for a detailed exposition when a new use of technology is introduced. Additional Excel solution procedures have been added, but, as before, they can be omitted without loss of continuity in the text.
- Each of the first seven chapters begins with an **Algebra Toolbox** section that reviews the prerequisite skills needed for successful completion of the chapter.

Topics discussed in the Toolbox are topics that are prerequisite to a college algebra course (they are often found in a Chapter R or appendix of a college algebra text). Key objectives are listed at the beginning of each Toolbox, and topics are introduced “just in time” to be used in the chapter under consideration.

- Many problems posed in the text are **multi-part and multi-level problems**.

Many problems require thoughtful, real-world answers adapted to varying conditions, rather than numerical answers. Questions such as “When will this model no longer be valid?” “What additional limitations must be placed on your answer?” and “Interpret your answer in the context of the application” are commonplace in the text.

- Chapter objectives are listed at the beginning of each chapter, and key objectives are given at the beginning of each section.

- Each chapter has a **Chapter Summary**, a **Chapter Skills Check**, and a **Chapter Review**.

The Chapter Summary lists the key terms and formulas discussed in the chapter, with section references. Chapter Skills Check and Chapter Review exercises provide additional review problems.

- The text encourages **collaborative learning**.

Each chapter ends with one or more Group Activities/Extended Applications that require students to solve multi-level problems involving real data or situations, making it desirable for students to collaborate in their solutions. These activities provide opportunities for students to work together to solve real problems that involve the use of technology and that frequently require modeling.

- In Chapter 8, a **Preparing for Calculus** section is included that shows how algebra skills from the first four chapters are used in a calculus context.

Many students have difficulty in calculus because they have trouble applying algebra skills to calculus. This section reviews earlier topics and shows how they apply to the development and application of calculus.

- The text encourages students to improve **communication skills and research skills**.

The Group Activities/Extended Applications require written reports and frequently require use of the Internet or a library. Some Extended Applications call for students to use literature or the Internet to find a graph or table of discrete data describing an issue. They are then required to make a scatter plot of the data, determine the function type that is the best fit for the data, create the model, discuss how well the model fits the data, and discuss how it can be used to analyze the issue.

- **Answers to Selected Exercises** include answers to all Chapter Skills Checks, Chapter Reviews, and odd-numbered application exercises so students have feedback regarding the exercises they work.

- **Supplements** are provided that will help students and instructors use technology to improve the learning and teaching experience. See the instructor and student resources lists.

## Acknowledgments

Many individuals contributed to the development of this text. We would like to thank the following reviewers, whose comments and suggestions were invaluable in preparing it.

- Jay Abramson, *Arizona State University*
- \* Ali Ahmad, *New Mexico State University*
- Khadija Ahmed, *Monroe County Community College*
- \* Janet Arnold, *Indiana University—Southeast Campus*
- Jamie Ashby, *Texarkana College*
- Sohrab Bakhtyari, *St. Petersburg College*
- Jean Bevis, *Georgia State University*
- Thomas Bird, *Austin Community College*
- Len Brin, *Southern Connecticut State University*
- \* Lisa Buckelew, *Oklahoma City Community College*

# Get the most out of MyMathLab®

MyMathLab is the world's leading online resource for teaching and learning mathematics. MyMathLab helps students and instructors improve results, and provides engaging experiences and personalized learning for each student so learning can happen in any environment. Plus, it offers flexible and time-saving course management features to allow instructors to easily manage their classes while remaining in complete control, regardless of course format.

## Personalized Support for Students

- MyMathLab comes with many learning resources—eText, animations, videos, and more—all designed to support your students as they progress through their course.
- The Adaptive Study Plan acts as a personal tutor, updating in real time based on student performance to provide personalized recommendations on what to work on next. With the new Companion Study Plan assignments, instructors can now assign the Study Plan as a prerequisite to a test or quiz, helping to guide students through concepts they need to master.
- Personalized Homework allows instructors to create homework assignments tailored to each student's specific needs, focused on just the topics they have not yet mastered.

Used by nearly 4 million students each year, the MyMathLab and MyStatLab family of products delivers consistent, measurable gains in student learning outcomes, retention, and subsequent course success.

# MyMathLab<sup>®</sup>

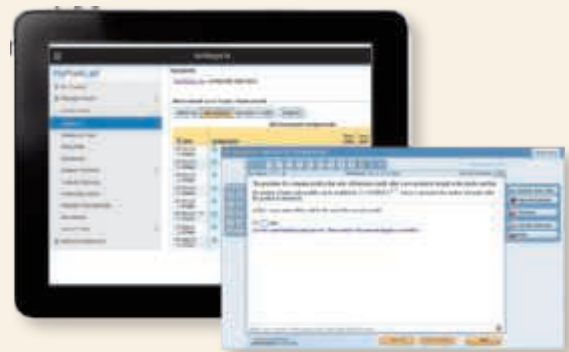

## for Harshbarger's College Algebra

MyMathLab delivers proven results in helping individual students succeed. The authors, Ronald Harshbarger and Lisa Yocco, have developed specific content in MyMathLab to give students the practice they need to become adept problem solvers in their future courses and careers. The MyMathLab features described here will help:

- Apply math in real-world scenarios
- Review math skills and forgotten concepts
- Organize the note-taking process

### Apply the Math

The exercise sets are fashioned for students majoring in business, social sciences, and life sciences. The focus is on developing students' problem-solving skills to prepare them for their future courses and careers. Exercise sets incorporate modeling techniques, application problems, and real data.

### Refresh Skills

Students who need help with prerequisite content are supported when and where they need it. *Getting Ready* assignments are available at the start of each chapter to refresh the algebra skills needed to learn the new material. *Getting Ready* assignments are available in both quiz and homework format.

### Organize Notes

New! The *Note-taking Guide* is a workbook that provides a framework for students as they take notes for this course. Students have a guide to help them organize definitions, examples, and processes. The guide is available for download in MyMathLab and also as a print supplement.

## Instructor Resources

Additional resources can be downloaded from [www.mymathlab.com](http://www.mymathlab.com) or [www.pearsonhighered.com](http://www.pearsonhighered.com) or hardcopy resources can be ordered from your sales representative.

### Annotated Instructor's Edition

The instructor's edition includes all answers to the exercise sets. Shorter answers are presented on the same page as the exercise; longer answers are in the back of the text. Sample homework assignments, selected by the authors, are indicated by a blue underline and may be assigned in MyMathLab®.

### TestGen®

TestGen ([www.pearsoned.com/testgen](http://www.pearsoned.com/testgen)) enables instructors to build, edit, print, and administer tests using a computerized bank of questions developed to cover all the objectives of the text.

### Instructor's Solutions Manual

This manual provides complete solutions to all problems in the text (download only).

### PowerPoint® Lecture Slides

Written specifically for this text, these fully editable lecture slides provide an outline for presenting definitions, figures, and key examples.

### Instructor's Testing Manual

This manual contains three alternative forms of tests per chapter with answer keys that contain more applications (download only).

## Student Resources

Additional resources to promote student success:

### Additional Skill and Exercise Manual

This manual provides additional practice and test preparation for students (download only).

### Student's Solutions Manual

This manual provides detailed, worked-out solutions to odd-numbered exercises.

### Note-taking Guide

This workbook, written by Ron Harshbarger and Lisa Yocco, provides a framework for students to help them take thorough, organized, and understandable notes for the course.

# To the Student

*College Algebra in Context* was written to help you develop the math skills you need to model problems and analyze data—tasks that are required in many jobs in the fields of management, life science, and social science. As you read this text, you may be surprised by how many ways professionals use algebra—from predicting how a population will vote in an upcoming election to projecting sales of a particular good.

There are many ways in which this text will help you succeed in your algebra course, and you will be a key partner in that success. Consider the following suggestions, which our own students have found helpful.

- 1. Take careful notes in an organized notebook.** Good organization is essential in a math course so that you do not fall behind and so that you can quickly refer to a topic when you need it.
  - **Separate your notebook into three sections:** class notes and examples, homework, and a problem log consisting of problems worked in class (which will provide a sample test).
  - **Begin each set of notes with identifying information:** the date, section of the book, page number from the book, and topic.
  - **Write explanations in words**, rather than just enumerating the steps in solving a problem, so that you will understand later what was done in each step. **Use abbreviations and short phrases**, rather than complete sentences, so that you can keep up with the explanation as you write.
  - **Write step-by-step instructions** for each process.
  - **Keep handouts and tests in your notebook**, using either a spiral notebook with pockets or a loose-leaf notebook.
- 2. Read the textbook.** Reading a mathematics textbook is different from reading other textbooks. Some suggestions follow.
  - **Skim the material** to get a general idea of the major topics. As you skim the material, circle any words that you do not understand. Read the Chapter Summary and look at the Exercises at the end of each section.
  - **Make note cards** for terms, symbols, and formulas. Review these note cards often to retain the information.
  - **Read for explanation and study the steps to work a problem.** It is essential that you learn *how* to work a problem and *why* the process works, rather than just memorizing sample problems.
  - **Study any illustrations and other aids** provided to help you understand a sample problem; then cover up the solution and try to work the problem on your own.
  - **Practice the process.** The more problems you do, the more confident you will become in your ability to do math and perform on tests. When doing your homework, don't give in to frustration. Put your homework aside for a while and come back to it later.
  - **Recite and review.** You should know and understand the example problems in your text well enough to be able to work similar problems on a test. Make note cards with example problems on one side and solutions on the other side.
- 3. Work through the Algebra Toolbox.** The Algebra Toolbox will give you a great review of the skills needed for success in each chapter. Note the Key Objectives listed at the beginning of the Toolbox; reread them once you have completed the Toolbox Exercises.
- 4. Practice with Skills Check exercises.** Skills Check exercises provide a way to practice your algebra skills before moving on to more applied problems.
- 5. Work the Exercises carefully.** The examples and exercises in this book model ways in which mathematics is used in the world. Look for connections between the

examples and what you are learning in your other classes. The examples will help you work through the applied exercises in each section.

## 6. Prepare for your exams.

- **Make a study schedule.** Begin to study at least three days before the test. You should make a schedule, listing those sections of the book that you will study each day. Schedule a sample test to be taken upon completion of those sections. This sample test should be taken at least two days before the test date so that you have time to work on areas of difficulty.
- **Rework problems.** You should actively prepare for a test. Do *more* than read your notes and the textbook. Do *more* than look over your homework. Review the note cards prepared from your class notes and text. Actually *rework* problems from each section of your book. Use the Chapter Summary at the end of each chapter to be sure you know and understand the key concepts and formulas. Then get some more practice with the Chapter Skills Checks and Review Exercises. Check your answers!
- **Get help.** Do not leave questions unanswered. Remember to utilize all resources in getting the help you need. Some resources that you might consider using are your fellow classmates, tutors, MyMathLab, the *Student's Solutions Manual*, math videos, and even your teacher. Do not take the gamble that certain questions will not be on the test!
- **Make a sample test.** Write a sample test by choosing a variety of problems from each section in the book. Then write the problems for your sample test in a different order from that in which they appear in the book. (*Hint:* If you write each problem, with directions, on a separate index card and mix them up, you will have a good sample test.)
- **Review and relax the night before the test.** The night before the test is best used *reviewing* the material. This may include working one problem from each section, reworking problems that have given you difficulty, or thinking about procedures you have used.
- **Practice taking tests online.** Ask your professor if MathXL or MyMathLab is available at your school. Both provide online homework, tutorial, and assessment systems for unlimited practice exercises correlated with your textbook. (An access code is required to use these products.)

## 7. Develop better math test-taking skills.

- **Do a memory download.** As soon as you receive your test, jot down formulas or rules that you will need but are likely to forget. If you get nervous later and forget this information, you can simply refer to the memory cues that you have written down.
- **Skip the difficult questions.** Come back to these later, or try to work at least one step for partial credit.
- **Keep a schedule.** The objective is to get as many points as possible. Don't linger over one question very long.
- **Review your work.** Check for careless errors and make sure your answers make sense.
- **Use all the time given.** There are no bonus points for turning your test in early. Use extra time for checking your work.

8. **Have fun!** Look for mathematics all around you. Read the newspaper, look at data on government websites, and observe how professionals use mathematics to do their jobs and communicate information to the world.

We have enjoyed teaching this material to our students and watching their understanding grow. We wish you the very best this semester and in your future studies.

# 1

## Functions, Graphs, and Models; Linear Functions

With digital TV becoming more affordable by the day, the demand for high-definition home entertainment is growing rapidly, with 115 million Americans having digital TV in 2010. The worldwide total was 517 million in 2010, with 40% of TV households having digital TV. More than 401 million digital TV homes are expected to be added between the end of 2010 and the end of 2015, and by 2015 more than 1 billion sets should be in use worldwide. Cell phone use is also on the rise, not just in the United States but throughout the world. By the middle of 2006, the number of subscribers to cell phone carriers had dramatically increased, and the number of total users had reached 4.6 billion by 2010. If the numbers continue to increase at a steady rate, the number of subscribers is expected to reach into the tens of billions over the next few years. These projections and others are made by collecting real-world data and creating mathematical models. The goal of this chapter and future chapters is to use real data and mathematical models to make predictions and solve meaningful problems.

section	objectives	applications
<b>1.1</b> Functions and Models	Determine graphs, tables, and equations that represent functions; find domains and ranges; evaluate functions and mathematical models; align data	Body temperature, personal computers, stock market, elderly men in the workforce, public health expenditures
<b>1.2</b> Graphs of Functions	Graph and evaluate functions with technology; graph mathematical models; graph data points; scale data	Aging workers, cost-benefit, voting, U.S. diabetes
<b>1.3</b> Linear Functions	Identify and graph linear functions; find and interpret intercepts and slopes; find constant rates of change; model revenue, cost, and profit; find marginal revenue, marginal cost, and marginal profit; identify special linear functions	Hispanics in the United States, loan balances, revenue, cost, profit, marginal cost, marginal revenue, marginal profit
<b>1.4</b> Equations of Lines	Write equations of lines; identify parallel and perpendicular lines; find average rates of change; compute the difference quotient; model approximately linear data	Service call charges, blood alcohol percent, inmate population, Tesla automobile sales, public school enrollment, average velocity

# Algebra TOOLBOX

## KEY OBJECTIVES

- Write sets of numbers using description or elements
- Identify sets of real numbers as being integers, rational numbers, and/or irrational numbers
- Identify the coefficients of terms and constants in algebraic expressions
- Remove parentheses and simplify polynomials
- Express inequalities as intervals and graph inequalities
- Multiply polynomials
- Divide polynomials by monomials
- Plot points on a coordinate system
- Use subscripts to represent fixed points

The Algebra Toolbox is designed to review prerequisite skills needed for success in each chapter. In this Toolbox, we discuss sets, the real numbers, the coordinate system, algebraic expressions, equations, inequalities, absolute values, and subscripts.

## Sets

In this chapter we will use sets to write domains and ranges of functions, and in future chapters we will find solution sets to equations and inequalities. A **set** is a well-defined collection of objects, including but not limited to numbers. In this section, we will discuss sets of real numbers, including natural numbers, integers, and rational numbers, and later in the text we will discuss the set of complex numbers. There are two ways to define a set. One way is by listing the **elements** (or **members**) of the set (usually between braces). For example, we may say that a set  $A$  contains 2, 3, 5, and 7 by writing  $A = \{2, 3, 5, 7\}$ . To say that 5 is an element of the set  $A$ , we write  $5 \in A$ . To indicate that 6 is not an element of the set, we write  $6 \notin A$ . Domains of functions and solutions to equations are sometimes given in sets with the elements listed.

If all the elements of the set can be listed, the set is said to be a **finite set**. If all elements of a set cannot be listed, the set is called an **infinite set**. To indicate that a set continues with the established pattern, we use three dots. For example,  $B = \{1, 2, 3, 4, 5, \dots, 100\}$  describes the finite set of whole numbers from 1 through 100, and  $N = \{1, 2, 3, 4, 5, \dots\}$  describes the infinite set of all whole numbers beginning with 1. This set is called the **natural numbers**.

Another way to define a set is to give its description. For example, we may write  $\{x \mid x \text{ is a math book}\}$  to define the set of math books. This is read as “the set of all  $x$  such that  $x$  is a math book.”  $N = \{x \mid x \text{ is a natural number}\}$  defines the set of natural numbers, which was also defined by  $N = \{1, 2, 3, 4, 5, \dots\}$  above.

The set that contains no elements is called the **empty set** and is denoted by  $\emptyset$ .

## EXAMPLE 1 ▶

### Sets

Write the following sets in two ways.

- The set  $A$  containing the natural numbers less than 7.
- The set  $B$  of natural numbers that are at least 7.

### SOLUTION

- $A = \{1, 2, 3, 4, 5, 6\}$ ,  $A = \{x \mid x \in N, x < 7\}$
- $B = \{7, 8, 9, 10, \dots\}$ ,  $B = \{x \mid x \in N, x \geq 7\}$

The relations that can exist between two sets follow.

### Relations Between Sets

- Sets  $X$  and  $Y$  are **equal** if they contain exactly the same elements.
- Set  $A$  is called a **subset** of set  $B$  if each element of  $A$  is an element of  $B$ . This is denoted  $A \subseteq B$ .
- If sets  $C$  and  $D$  have no elements in common, they are called **disjoint**.

## EXAMPLE 2 ► Relations Between Sets

For the sets  $A = \{x \mid x \leq 9, x \text{ is a natural number}\}$ ,  $B = \{2, 4, 6\}$ ,  $C = \{3, 5, 8, 10\}$ :

- Which of the sets  $A$ ,  $B$ , and  $C$  are subsets of  $A$ ?
- Which pairs of sets are disjoint?
- Are any of these three sets equal?

### SOLUTION

- Every element of  $B$  is contained in  $A$ . Thus, set  $B$  is a subset of  $A$ . Because every element of  $A$  is contained in  $A$ ,  $A$  is a subset of  $A$ .
- Sets  $B$  and  $C$  have no elements in common, so they are disjoint.
- None of these sets have exactly the same elements, so none are equal.

## The Real Numbers

Because most of the mathematical applications you will encounter in an applied nontechnical setting use real numbers, the emphasis in this text is the **real number system**.<sup>\*</sup> Real numbers can be rational or irrational. **Rational numbers** include integers, fractions containing only integers (with no 0 in a denominator), and decimals that either terminate or repeat. Some examples of rational numbers are

$$-9, \frac{1}{2}, 0, 12, -\frac{4}{7}, 6.58, -7.\bar{3}$$

**Irrational numbers** are real numbers that are not rational. Some examples of irrational numbers are  $\pi$  (a number familiar to us from the study of circles),  $\sqrt{2}$ ,  $\sqrt[3]{5}$ , and  $\sqrt[3]{-10}$ .

The types of real numbers are described in Table 1.1.

Table 1.1

Types of Real Numbers	Descriptions
Natural numbers	1, 2, 3, 4, . . .
Integers	Natural numbers, zero, and the negatives of the natural numbers: . . . , -3, -2, -1, 0, 1, 2, 3, . . .
Rational numbers	All numbers that can be written in the form $\frac{p}{q}$ , where $p$ and $q$ are both integers with $q \neq 0$ . Rational numbers can be written as terminating or repeating decimals.
Irrational numbers	All real numbers that are not rational numbers. Irrational numbers cannot be written as terminating or repeating decimals.

We can represent real numbers on a **real number line**. Exactly one real number is associated with each point on the line, and we say there is a one-to-one correspondence between the real numbers and the points on the line. That is, the real number line is a graph of the real numbers (see Figure 1.1).

Figure 1.1

<sup>\*</sup> The complex number system will be discussed in the Chapter 3 Toolbox.

Notice the number  $\pi$  on the real number line in Figure 1.1. This special number, which can be approximated by 3.14, results when the circumference of (distance around) any circle is divided by the diameter of the circle. Another special real number is  $e$ ; it is denoted by

$$e \approx 2.71828$$

We will discuss this number, which is important in financial and biological applications, later in the text.

## Inequalities and Intervals on the Number Line

In this chapter, we will sometimes use inequalities and interval notation to describe domains and ranges of functions. An **inequality** is a statement that one quantity is greater (or less) than another quantity. We say that  $a$  is less than  $b$  (written  $a < b$ ) if the point representing  $a$  is to the left of the point representing  $b$  on the real number line. We may indicate that the number  $a$  is greater than or equal to  $b$  by writing  $a \geq b$ . The subset of real numbers  $x$  that lie between  $a$  and  $b$  (excluding  $a$  and  $b$ ) can be denoted by the **double inequality**  $a < x < b$  or by the **open interval**  $(a, b)$ . This is called an open interval because neither of the endpoints is included in the interval. The **closed interval**  $[a, b]$  represents the set of all real numbers satisfying  $a \leq x \leq b$ . Intervals containing one endpoint, such as  $[a, b)$  or  $(a, b]$ , are called **half-open intervals**. We can represent the inequality  $x \geq a$  by the interval  $[a, \infty)$ , and we can represent the inequality  $x < a$  by the interval  $(-\infty, a)$ . Note that  $\infty$  and  $-\infty$  are not numbers, but  $\infty$  is used in  $[a, \infty)$  to represent the fact that  $x$  increases without bound and  $-\infty$  is used in  $(-\infty, a)$  to indicate that  $x$  decreases without bound. Table 1.2 shows the graphs of different types of intervals.

**Table 1.2**

Interval Notation	Inequality Notation	Verbal Description	Number Line Graph
$(a, \infty)$	$x > a$	$x$ is greater than $a$	
$[a, \infty)$	$x \geq a$	$x$ is greater than or equal to $a$	
$(-\infty, b)$	$x < b$	$x$ is less than $b$	
$(-\infty, b]$	$x \leq b$	$x$ is less than or equal to $b$	
$(a, b)$	$a < x < b$	$x$ is between $a$ and $b$ , not including either $a$ or $b$	
$[a, b)$	$a \leq x < b$	$x$ is between $a$ and $b$ , including $a$ but not including $b$	
$(a, b]$	$a < x \leq b$	$x$ is between $a$ and $b$ , not including $a$ but including $b$	
$[a, b]$	$a \leq x \leq b$	$x$ is between $a$ and $b$ , including both $a$ and $b$	

Note that open circles may be used instead of parentheses, and solid circles may be used instead of brackets, in the number line graphs.

**EXAMPLE 3** ▶ **Intervals**

Write the interval corresponding to each of the inequalities in parts (a)–(e), and then graph the inequality.

- a.  $-1 \leq x \leq 2$    b.  $2 < x < 4$    c.  $-2 < x \leq 3$    d.  $x \geq 3$    e.  $x < 5$

**SOLUTION****Algebraic Expressions**

In algebra we deal with a combination of real numbers and letters. Generally, the letters are symbols used to represent unknown quantities or fixed but unspecified constants. Letters representing unknown quantities are usually called **variables**, and letters representing fixed but unspecified numbers are called **literal constants**. An expression created by performing additions, subtractions, or other arithmetic operations with one or more real numbers and variables is called an **algebraic expression**. Unless otherwise specified, the variables represent real numbers for which the algebraic expression is a real number. Examples of algebraic expressions include

$$5x - 2y, \quad \frac{3x - 5}{12 + 5y}, \quad \text{and} \quad 7z + 2$$

A **term** of an algebraic expression is the product of one or more variables and a real number; the real number is called a **numerical coefficient** or simply a **coefficient**. A constant is also considered a term of an algebraic expression and is called a **constant term**. For instance, the term  $5yz$  is the product of the factors 5,  $y$ , and  $z$ ; this term has coefficient 5.

**Polynomials**

An algebraic expression containing a finite number of additions, subtractions, and multiplications of constants and nonnegative integer powers of variables is called a **polynomial**. When simplified, a polynomial cannot contain negative powers of variables, fractional powers of variables, variables in a denominator, or variables inside a radical.

The expressions  $5x - 2y$  and  $7z^3 + 2y$  are polynomials, but  $\frac{3x - 5}{12 + 5y}$  and  $3x^2 - 6\sqrt{x}$  are not polynomials. If the only variable in the polynomial is  $x$ , then the polynomial is called a **polynomial in  $x$** . The general form of a polynomial in  $x$  is

$$a_n x^n + a_{n-1} x^{n-1} + \cdots + a_1 x + a_0$$

where  $a_0$  and each coefficient  $a_n, a_{n-1}, \dots$  are real numbers and each exponent  $n, n - 1, \dots$  is a positive integer.

For a polynomial in the single variable  $x$ , the power of  $x$  in each term is the **degree** of that term, with the degree of a constant term equal to 0. The term that has the highest power of  $x$  is called the **leading term** of the polynomial, the coefficient of this term is the **leading coefficient**, and the degree of this term is the **degree of the polynomial**. Thus,  $5x^4 + 3x^2 - 6$  is a fourth-degree polynomial with leading coefficient 5. Polynomials with one term are called **monomials**, those with two terms are called **binomials**, and those with three terms are called **trinomials**. The right side of the equation  $y = 4x + 3$  is a first-degree binomial, and the right side of  $y = 6x^2 - 5x + 2$  is a second-degree trinomial.

#### EXAMPLE 4 ► Polynomials

For each polynomial, state the constant term, the leading coefficient, and the degree of the polynomial.

a.  $5x^2 - 8x + 2x^4 - 3$     b.  $5x^2 - 6x^3 + 3x^6 + 7$

#### SOLUTION

- a. The constant term is  $-3$ ; the term of highest degree is  $2x^4$ , so the leading coefficient is 2 and the degree of the polynomial is 4.
- b. The constant term is 7; the term of highest degree is  $3x^6$ , so the leading coefficient is 3 and the degree of the polynomial is 6.

### Operations with Polynomials

Terms that contain exactly the same variables with exactly the same exponents are called **like terms**. For example,  $3x^2y$  and  $7x^2y$  are like terms, but  $3x^2y$  and  $3xy$  are not. We add or subtract (**combine**) algebraic expressions by combining the like terms. For example, the sum of the expressions  $5sx - 2y + 7z^3$  and  $2y + 5sx - 4z^3$  is

$$\begin{aligned}(5sx - 2y + 7z^3) + (2y + 5sx - 4z^3) &= 5sx - 2y + 7z^3 + 2y + 5sx - 4z^3 \\ &= 10sx + 3z^3\end{aligned}$$

The simplified form of

$$3x^2y + 7xy^2 + 6x^2y - 4xy^2 - 5xy \quad \text{is} \quad 9x^2y + 3xy^2 - 5xy$$

### Removing Parentheses

We often need to remove parentheses when simplifying algebraic expressions and when solving equations. Removing parentheses frequently requires use of the **distributive property**, which says that for real numbers  $a$ ,  $b$ , and  $c$ ,  $a(b + c) = ab + ac$ . Care must be taken to avoid mistakes with signs when using the distributive property. Multiplying a sum in parentheses by a negative number changes the sign of each term in the parentheses. For example,

$$-3(x - 2y) = -3(x) + (-3)(-2y) = -3x + 6y$$

and

$$-(3xy - 5x^3) = -3xy + 5x^3$$

The difference of the expressions  $5sx - 2y + 7z^3$  and  $2y + 5sx - 4z^3$  is

$$\begin{aligned}(5sx - 2y + 7z^3) - (2y + 5sx - 4z^3) &= 5sx - 2y + 7z^3 - 2y - 5sx + 4z^3 \\ &= -4y + 11z^3\end{aligned}$$

Note that removing parentheses preceded by a negative sign results in the sign of every term being changed.

We multiply two monomials by multiplying the coefficients and adding the exponents of the respective variables that are in both monomials. For example,

$$(3x^3y^2)(4x^2y) = 3 \cdot 4 \cdot x^3 \cdot x^2 \cdot y^2 \cdot y = 3 \cdot 4x^{3+2}y^{2+1} = 12x^5y^3$$

We can multiply more than two monomials in the same manner.

We can use the **distributive property**,

$$a(b + c) = ab + ac$$

to multiply a monomial times a polynomial. For example,

$$x(3x + y) = x \cdot 3x + x \cdot y = 3x^2 + xy$$

We can extend the property  $a(b + c) = ab + ac$  to multiply a monomial times any polynomial. For example,

$$3x(2x + xy + 6) = 3x \cdot 2x + 3x \cdot xy + 3x \cdot 6 = 6x^2 + 3x^2y + 18x$$

The product of two binomials can be found by using the distributive property as follows:

$$(a + b)(c + d) = a(c + d) + b(c + d) = ac + ad + bc + bd$$

Note that this product can be remembered as the sum of the products of the First, Outer, Inner, and Last terms of the binomials, and we use the word **FOIL** to denote this method.

$$\begin{array}{ccc} \text{First} & \text{Last} & \text{F} \quad \text{O} \quad \text{I} \quad \text{L} \\ (a + b)(c + d) & = & ac + ad + bc + bd \\ \text{Outer} & & \end{array}$$

## EXAMPLE 5 ▶ Multiplying Polynomials

Find the following products.

a.  $(x - 4)(x - 5)$     b.  $(2x - 3)(3x + 2)$

### SOLUTION

$$\begin{aligned}\text{a. } (x - 4)(x - 5) &= x \cdot x + x(-5) + (-4)x + (-4)(-5) \\ &= x^2 - 5x - 4x + 20 = x^2 - 9x + 20\end{aligned}$$

$$\begin{aligned}\text{b. } (2x - 3)(3x + 2) &= (2x)(3x) + (2x)2 + (-3)(3x) + (-3)2 \\ &= 6x^2 + 4x - 9x - 6 = 6x^2 - 5x - 6\end{aligned}$$

Certain products and powers involving binomials occur frequently, so the following special products should be remembered.

### Special Binomial Products

- $(x + a)(x - a) = x^2 - a^2$  (difference of two squares)
- $(x + a)^2 = x^2 + 2ax + a^2$  (perfect square trinomial)
- $(x - a)^2 = x^2 - 2ax + a^2$  (perfect square trinomial)

**EXAMPLE 6** ▶ **Special Binomial Products**

Find the following products by using the special binomial products formulas.

a.  $(5x + 1)^2$     b.  $(2x - 5)(2x + 5)$     c.  $(3x - 4)^2$

**SOLUTION**

a.  $(5x + 1)^2 = (5x)^2 + 2(5x)(1) + 1^2 = 25x^2 + 10x + 1$

b.  $(2x - 5)(2x + 5) = (2x)^2 - 5^2 = 4x^2 - 25$

c.  $(3x - 4)^2 = (3x)^2 - 2(3x)(4) + 4^2 = 9x^2 - 24x + 16$

**Dividing Polynomials by Monomials**

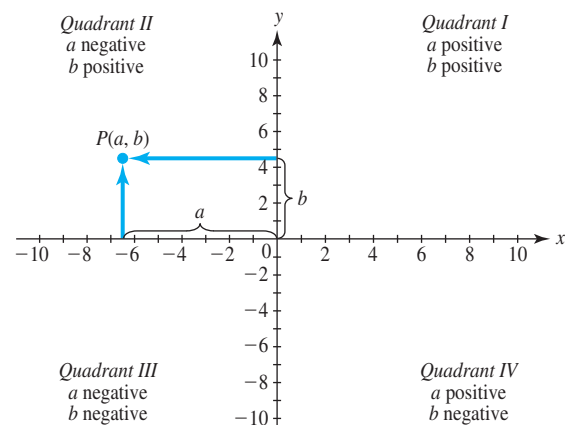

A polynomial can be divided by a monomial if the monomial can be divided into each term of the polynomial. In this case, the monomial is called a **factor** of the polynomial. For example, if  $x$  is not equal to 0, we can simplify the algebraic expression

$$\frac{3x^2 - 4x}{x} \text{ as } \frac{3x^2}{x} - \frac{4x}{x} = 3x - 4$$

**The Coordinate System**

Much of our work in algebra involves graphing. To graph in two dimensions, we use a rectangular coordinate system, or **Cartesian coordinate system**. Such a system allows us to assign a unique point in a plane to each ordered pair of real numbers. We construct the coordinate system by drawing a horizontal number line and a vertical number line so that they intersect at their origins (Figure 1.2). The point of intersection is called the **origin** of the system, the number lines are called the coordinate **axes**, and the plane is divided into four parts called **quadrants**. In Figure 1.3, we call the horizontal axis the **x-axis** and the vertical axis the **y-axis**, and we denote any point in the plane as the ordered pair  $(x, y)$ .

The ordered pair  $(a, b)$  represents the point  $P$  that is  $|a|$  units from the  $y$ -axis (right if  $a$  is positive, left if  $a$  is negative) and  $|b|$  units from the  $x$ -axis (up if  $b$  is positive, down if  $b$  is negative). The values of  $a$  and  $b$  are called the **rectangular coordinates** of the point. Figure 1.3 shows point  $P$  with coordinates  $(a, b)$ . The point is in the second quadrant, where  $a < 0$  and  $b > 0$ .

**Figure 1.2****Figure 1.3****Subscripts**

We sometimes need to distinguish between two  $y$ -values and/or  $x$ -values in the same problem or on the same graph, or to designate literal constants. It is often convenient to

do this by using **subscripts**. For example, if we have two fixed but unidentified points on a graph, we can represent one point as  $(x_1, y_1)$  and the other as  $(x_2, y_2)$ . Subscripts also can be used to designate different equations entered in graphing utilities; for example,  $y = 2x - 5$  may appear as  $y_1 = 2x - 5$  when entered in the equation editor of a graphing calculator.

## Toolbox EXERCISES

- Write “the set of all natural numbers  $N$  less than 9” in two different ways.
- Is it true that  $3 \in \{1, 3, 4, 6, 8, 9, 10\}$ ?
- Is  $A$  a subset of  $B$  if  $A = \{2, 3, 5, 7, 8, 9, 10\}$  and  $B = \{3, 5, 8, 9\}$ ?
- Is it true that  $\frac{1}{2} \in N$  if  $N$  is the set of natural numbers?
- Is the set of integers a subset of the set of rational numbers?
- Are sets of rational numbers and irrational numbers disjoint sets?

Identify the sets of numbers in Exercises 7–9 as containing one or more of the following: integers, rational numbers, and/or irrational numbers.

- $\{5, 2, 5, 8, -6\}$
- $\left\{\frac{1}{2}, -4.1, \frac{5}{3}, 1\frac{2}{3}\right\}$
- $\left\{\sqrt{3}, \pi, \frac{\sqrt[3]{2}}{4}, \sqrt{5}\right\}$

In Exercises 10–12, express each interval or graph as an inequality.

11.  $[-3, 3]$                       12.  $(-\infty, 3]$

In Exercises 13–15, express each inequality or graph in interval notation.

13.  $x \leq 7$                       14.  $3 < x \leq 7$

In Exercises 16–18, graph the inequality or interval on a real number line.

16.  $(-2, \infty)$                       17.  $5 > x \geq 2$   
18.  $x < 3$

In Exercises 19–21, plot the points on a coordinate system.

19.  $(-1, 3)$                       20.  $(4, -2)$   
21.  $(-4, 3)$

22. Plot the points  $(-1, 2)$ ,  $(3, -1)$ ,  $(4, 2)$ , and  $(-2, -3)$  on the same coordinate system.
23. Plot the points  $(x_1, y_1)$  and  $(x_2, y_2)$  on a coordinate system if

$$x_1 = 2, y_1 = -1, x_2 = -3, y_2 = -5$$

Determine whether each expression in Exercises 24–27 is a polynomial. If it is, state the degree of the polynomial.

24.  $14x^4 - 6x^3 + 9x - 7$     25.  $\frac{5x - 8}{3x + 2}$   
26.  $10x - \sqrt{y}$                       27.  $-12x^4 + 5x^6$

For each algebraic expression in Exercises 28 and 29, give the coefficient of each term and give the constant term.

28.  $-3x^2 - 4x + 8$                       29.  $5x^4 + 7x^3 - 3$
30. Find the sum of  $z^4 - 15z^2 + 20z - 6$  and  $2z^4 + 4z^3 - 12z^2 - 5$ .
31. Simplify the expression

$$3x + 2y^4 - 2x^3y^4 - 119 - 5x - 3y^2 + 5y^4 + 110$$

Remove the parentheses and simplify in Exercises 32–37.

32.  $4(p + d)$                       33.  $-2(3x - 7y)$   
34.  $-a(b + 8c)$                       35.  $4(x - y) - (3x + 2y)$   
36.  $4(2x - y) + 4xy - 5(y - xy) - (2x - 4y)$   
37.  $2x(4yz - 4) - (5xyz - 3x)$

In Exercises 38–42, find the products.

38.  $(4x^2y^3)(-3a^2x^3)$   
39.  $2xy^3(2x^2y + 4xz - 3z^2)$   
40.  $(x - 7)(2x + 3)$                       41.  $(k - 3)^2$   
42.  $(4x - 7y)(4x + 7y)$   
43. Simplify  $\frac{12x - 5x^2}{x}$ .

44. Simplify  $\frac{8x^2 + 2x}{2x}$ .
