

# SULLIVAN

## College Algebra

Tenth Edition

# To the Student

As you begin, you may feel anxious about the number of theorems, definitions, procedures, and equations. You may wonder if you can learn it all in time. Don't worry—your concerns are normal. This textbook was written with you in mind. If you attend class, work hard, and read and study this text, you will build the knowledge and skills you need to be successful. Here's how you can use the text to your benefit.

## Read Carefully

When you get busy, it's easy to skip reading and go right to the problems. Don't . . . the text has a large number of examples and clear explanations to help you break down the mathematics into easy-to-understand steps. Reading will provide you with a clearer understanding, beyond simple memorization. Read before class (not after) so you can ask questions about anything you didn't understand. You'll be amazed at how much more you'll get out of class if you do this.

## Use the Features

I use many different methods in the classroom to communicate. Those methods, when incorporated into the text, are called "features." The features serve many purposes, from providing timely review of material you learned before (just when you need it) to providing organized review sessions to help you prepare for quizzes and tests. Take advantage of the features and you will master the material.

To make this easier, we've provided a brief guide to getting the most from this text. Refer to "Prepare for Class," "Practice," and "Review" on the following three pages. Spend fifteen minutes reviewing the guide and familiarizing yourself with the features by flipping to the page numbers provided. Then, as you read, use them. This is the best way to make the most of your text.

Please do not hesitate to contact me, through Pearson Education, with any questions, comments, or suggestions for improving this text. I look forward to hearing from you, and good luck with all of your studies.

*Best Wishes!*  
*Michael Sullivan*

# Prepare for Class “Read the Book”

Feature	Description	Benefit	Page
<b>Every Chapter Opener begins with . . .</b>			
<b>Chapter-Opening Topic &amp; Project</b>	Each chapter begins with a discussion of a topic of current interest and ends with a related project.	The Project lets you apply what you learned to solve a problem related to the topic.	402
 <b>Internet-Based Projects</b>	The projects allow for the integration of spreadsheet technology that you will need to be a productive member of the workforce.	The projects give you an opportunity to collaborate and use mathematics to deal with issues of current interest.	503
<b>Every Section begins with . . .</b>			
<b>Learning Objectives</b>	Each section begins with a list of objectives. Objectives also appear in the text where the objective is covered.	These focus your studying by emphasizing what’s most important and where to find it.	423
<b>Sections contain . . .</b>			
<b>PREPARING FOR THIS SECTION</b>	Most sections begin with a list of key concepts to review with page numbers.	Ever forget what you’ve learned? This feature highlights previously learned material to be used in this section. Review it, and you’ll always be prepared to move forward.	423
<b>Now Work the ‘Are You Prepared?’ Problems</b>	Problems that assess whether you have the prerequisite knowledge for the upcoming section.	Not sure you need the Preparing for This Section review? Work the ‘Are You Prepared?’ problems. If you get one wrong, you’ll know exactly what you need to review and where to review it!	423, 434
 <b>Now Work PROBLEMS</b>	These follow most examples and direct you to a related exercise.	We learn best by doing. You’ll solidify your understanding of examples if you try a similar problem right away, to be sure you understand what you’ve just read.	430, 435
<b>WARNING</b>	Warnings are provided in the text.	These point out common mistakes and help you to avoid them.	456
<b>Exploration and Seeing the Concept</b>	These graphing utility activities foreshadow a concept or solidify a concept just presented.	You will obtain a deeper and more intuitive understanding of theorems and definitions.	418, 443
 <b>In Words</b>	These provide alternative descriptions of select definitions and theorems.	Does math ever look foreign to you? This feature translates math into plain English.	440
 <b>Calculus</b>	These appear next to information essential for the study of calculus.	Pay attention—if you spend extra time now, you’ll do better later!	205, 407, 431
<b>SHOWCASE EXAMPLES</b>	These examples provide “how-to” instruction by offering a guided, step-by-step approach to solving a problem.	With each step presented on the left and the mathematics displayed on the right, you can immediately see how each step is employed.	334
 <b>Model It! Examples and Problems</b>	These examples and problems require you to build a mathematical model from either a verbal description or data. The homework Model It! problems are marked by purple headings.	It is rare for a problem to come in the form “Solve the following equation.” Rather, the equation must be developed based on an explanation of the problem. These problems require you to develop models that will allow you to describe the problem mathematically and suggest a solution to the problem.	447, 475

# Practice “Work the Problems”

Feature	Description	Benefit	Page
<b>‘Are You Prepared?’ Problems</b>	These assess your retention of the prerequisite material you’ll need. Answers are given at the end of the section exercises. This feature is related to the Preparing for This Section feature.	Do you always remember what you’ve learned? Working these problems is the best way to find out. If you get one wrong, you’ll know exactly what you need to review and where to review it!	434, 440
<b>Concepts and Vocabulary</b>	These short-answer questions, mainly Fill-in-the-Blank, Multiple-Choice and True/False items, assess your understanding of key definitions and concepts in the current section.	It is difficult to learn math without knowing the language of mathematics. These problems test your understanding of the formulas and vocabulary.	434
<b>Skill Building</b>	Correlated with section examples, these problems provide straightforward practice.	It’s important to dig in and develop your skills. These problems provide you with ample opportunity to do so.	434–436
<b>Mixed Practice</b>	These problems offer comprehensive assessment of the skills learned in the section by asking problems that relate to more than one concept or objective. These problems may also require you to utilize skills learned in previous sections.	Learning mathematics is a building process. Many concepts are interrelated. These problems help you see how mathematics builds on itself and also see how the concepts tie together.	436–437
<b>Applications and Extensions</b>	These problems allow you to apply your skills to real-world problems. They also allow you to extend concepts learned in the section.	You will see that the material learned within the section has many uses in everyday life.	437–439
<b>Explaining Concepts: Discussion and Writing</b>	“Discussion and Writing” problems are colored red. They support class discussion, verbalization of mathematical ideas, and writing and research projects.	To verbalize an idea, or to describe it clearly in writing, shows real understanding. These problems nurture that understanding. Many are challenging, but you’ll get out what you put in.	439
<b>NEW! Retain Your Knowledge</b>	These problems allow you to practice content learned earlier in the course.	Remembering how to solve all the different kinds of problems that you encounter throughout the course is difficult. This practice helps you remember.	439
<b>Now Work PROBLEMS</b>	Many examples refer you to a related homework problem. These related problems are marked by a pencil and orange numbers.	If you get stuck while working problems, look for the closest Now Work problem, and refer to the related example to see if it helps.	432, 435, 436
<b>Review Exercises</b>	Every chapter concludes with a comprehensive list of exercises to practice. Use the list of objectives to determine the objective and examples that correspond to the problems.	Work these problems to ensure that you understand all the skills and concepts of the chapter. Think of it as a comprehensive review of the chapter.	499–501

# Review “Study for Quizzes and Tests”

Feature	Description	Benefit	Page
<b>The Chapter Review at the end of each chapter contains . . .</b>			
<b>Things to Know</b>	A detailed list of important theorems, formulas, and definitions from the chapter.	Review these and you’ll know the most important material in the chapter!	497–498
<b>You Should Be Able to . . .</b>	Contains a complete list of objectives by section, examples that illustrate the objective, and practice exercises that test your understanding of the objective.	Do the recommended exercises and you’ll have mastered the key material. If you get something wrong, go back and work through the example listed and try again.	498–499
<b>Review Exercises</b>	These provide comprehensive review and practice of key skills, matched to the Learning Objectives for each section.	Practice makes perfect. These problems combine exercises from all sections, giving you a comprehensive review in one place.	499–501
<b>Chapter Test</b>	About 15–20 problems that can be taken as a Chapter Test. Be sure to take the Chapter Test under test conditions—no notes!	Be prepared. Take the sample practice test under test conditions. This will get you ready for your instructor’s test. If you get a problem wrong, you can watch the Chapter Test Prep Video.	502
<b>Cumulative Review</b>	These problem sets appear at the end of each chapter, beginning with Chapter 2. They combine problems from previous chapters, providing an ongoing cumulative review. When you use them in conjunction with the Retain Your Knowledge problems, you will be ready for the final exam.	These problem sets are really important. Completing them will ensure that you are not forgetting anything as you go. This will go a long way toward keeping you primed for the final exam.	502–503
<b>Chapter Projects</b>	The Chapter Projects apply to what you’ve learned in the chapter. Additional projects are available on the Instructor’s Resource Center (IRC).	The Chapter Projects give you an opportunity to apply what you’ve learned in the chapter to the opening topic. If your instructor allows, these make excellent opportunities to work in a group, which is often the best way of learning math.	503–504
 <b>Internet-Based Projects</b>	In selected chapters, a Web-based project is given.	These projects give you an opportunity to collaborate and use mathematics to deal with issues of current interest by using the Internet to research and collect data.	503

# Achieve Your Potential

The author, Michael Sullivan, has developed specific content in MyMathLab® to ensure you have many resources to help you achieve success in mathematics - and beyond! The MyMathLab features described here will help you:

- **Review** math skills and concepts you may have forgotten
- **Retain** new concepts as you move through your math course
- **Develop** skills that will help with your transition to college

## Adaptive Study Plan

The Study Plan will help you study more efficiently and effectively. Your performance and activity are assessed continually in real time, providing a personalized experience based on your individual needs.

A screenshot of the MyMathLab 'Study Plan' interface. At the top, it says 'Study Plan' and 'You have earned 0 of 687 mastery points (MP)'. Below this, it lists 'What to work on next' with a section for 'GR.1 Real Number System' containing the objective 'Identify types of numbers.' with 'Practice' and 'Quiz Me' buttons and a progress indicator '0 of 1 MP'. A section below lists 'More Objectives to practice and master' for 'GR.1 Real Number System' with four objectives: 'Graph numbers on a number line.', 'Find absolute values.', 'Calculate with real numbers.', and 'Use the properties of real numbers.' Each objective has 'Practice' and 'Quiz Me' buttons and a progress indicator '0 of 1 MP'. The MyMathLab logo is in the bottom right corner.

## Skills for Success

The Skills for Success Modules support your continued success in college. These modules provide tutorials and guidance on a variety of topics, including transitioning to college, online learning, time management, and more.

Additional content is provided to help with the development of professional skills such as resume writing and interview preparation.

A screenshot of the MyMathLab 'Skills for Success' navigation menu. The menu is on the left side of the page and includes options like 'Course Home', 'Homework', 'Quizzes &amp; Tests', 'Study Plan', 'Gradebook', 'Chapter Contents', 'Skills for Success' (which is highlighted), 'Math-Reading Connections', 'Student Success Modules', 'College Transition', 'Online Learning', 'Reading &amp; Annotating', 'Stress Management', 'Time Management', 'Financial Literacy', and 'Professionalism Tools'. The 'College Transition' section is expanded to show 'Pre-Test', 'Overview', 'Activities', and 'Post-Test'.

A screenshot of a Pearson Skills for Success module page. The page title is 'Stress Management' and the Pearson logo is in the top right. The main heading is 'Analyze and Build the Skill Further: Serious Level of Stress and Interventions' and the activity is 'Activity 1B'. There are 'Home', 'Help', and 'Exit' links. The 'Directions' section states: 'Jamal has asked you where to go for help at school or in your local community. In the entry field, list the location and contact information for medical, counseling, academic advising, financial aid, and tutoring help. Print and save a copy of your work for use in the Apply activity.' Below the text is a large empty text entry field. To the left of the field is a photo of a man in a brown jacket. To the right is a photo of a black iPod. A 'Print' button is at the bottom left.

## Getting Ready

Are you frustrated when you know you learned a math concept in the past, but you can't quite remember the skill when it's time to use it?

Don't worry!

The author has included Getting Ready material so you can brush up on forgotten material efficiently by taking a quick skill review quiz to pinpoint the areas where you need help.

Then, a personalized homework assignment provides additional practice on those forgotten concepts, right when you need it.

modify		Homework

		01/28/14 11:59pm	Chapter 2 Post-Test

## Retain Your Knowledge

As you work through your math course, these MyMathLab® exercises support ongoing review to help you maintain essential skills.

The ability to recall important math concepts as you continually acquire new mathematical skills will help you be successful in this math course and in your future math courses.

Three Distinct Series	xvi
The Contemporary Series	xvii
Preface to the Instructor	xviii
Resources for Success	xxii
Applications Index	xxv

## R Review 1

<b>R.1 Real Numbers</b>	2
Work with Sets • Classify Numbers • Evaluate Numerical Expressions • Work with Properties of Real Numbers	
<b>R.2 Algebra Essentials</b>	17
Graph Inequalities • Find Distance on the Real Number Line • Evaluate Algebraic Expressions • Determine the Domain of a Variable • Use the Laws of Exponents • Evaluate Square Roots • Use a Calculator to Evaluate Exponents • Use Scientific Notation	
<b>R.3 Geometry Essentials</b>	30
Use the Pythagorean Theorem and Its Converse • Know Geometry Formulas • Understand Congruent Triangles and Similar Triangles	
<b>R.4 Polynomials</b>	39
Recognize Monomials • Recognize Polynomials • Add and Subtract Polynomials • Multiply Polynomials • Know Formulas for Special Products • Divide Polynomials Using Long Division • Work with Polynomials in Two Variables	
<b>R.5 Factoring Polynomials</b>	49
Factor the Difference of Two Squares and the Sum and Difference of Two Cubes • Factor Perfect Squares • Factor a Second-Degree Polynomial: $x^2 + Bx + C$ • Factor by Grouping • Factor a Second-Degree Polynomial: $Ax^2 + Bx + C, A \neq 1$ • Complete the Square	
<b>R.6 Synthetic Division</b>	58
Divide Polynomials Using Synthetic Division	
<b>R.7 Rational Expressions</b>	62
Reduce a Rational Expression to Lowest Terms • Multiply and Divide Rational Expressions • Add and Subtract Rational Expressions • Use the Least Common Multiple Method • Simplify Complex Rational Expressions	
<b>R.8 <math>n</math>th Roots; Rational Exponents</b>	73
Work with $n$ th Roots • Simplify Radicals • Rationalize Denominators • Simplify Expressions with Rational Exponents	

## 1 Equations and Inequalities 81

<b>1.1 Linear Equations</b>	82
Solve a Linear Equation • Solve Equations That Lead to Linear Equations • Solve Problems That Can Be Modeled by Linear Equations	
<b>1.2 Quadratic Equations</b>	92
Solve a Quadratic Equation by Factoring • Solve a Quadratic Equation by Completing the Square • Solve a Quadratic Equation Using the Quadratic Formula • Solve Problems That Can Be Modeled by Quadratic Equations	

<b>1.3</b>	<b>Complex Numbers; Quadratic Equations in the Complex Number System</b>	<b>104</b>
	Add, Subtract, Multiply, and Divide Complex Numbers • Solve Quadratic Equations in the Complex Number System	
<b>1.4</b>	<b>Radical Equations; Equations Quadratic in Form; Factorable Equations</b>	<b>113</b>
	Solve Radical Equations • Solve Equations Quadratic in Form • Solve Equations by Factoring	
<b>1.5</b>	<b>Solving Inequalities</b>	<b>119</b>
	Use Interval Notation • Use Properties of Inequalities • Solve Inequalities • Solve Combined Inequalities	
<b>1.6</b>	<b>Equations and Inequalities Involving Absolute Value</b>	<b>130</b>
	Solve Equations Involving Absolute Value • Solve Inequalities Involving Absolute Value	
<b>1.7</b>	<b>Problem Solving: Interest, Mixture, Uniform Motion, Constant Rate Job Applications</b>	<b>134</b>
	Translate Verbal Descriptions into Mathematical Expressions • Solve Interest Problems • Solve Mixture Problems • Solve Uniform Motion Problems • Solve Constant Rate Job Problems	
	<b>Chapter Review</b>	<b>143</b>
	<b>Chapter Test</b>	<b>147</b>
	<b>Chapter Projects</b>	<b>147</b>

## **2** **Graphs** **149**

<b>2.1</b>	<b>The Distance and Midpoint Formulas</b>	<b>150</b>
	Use the Distance Formula • Use the Midpoint Formula	
<b>2.2</b>	<b>Graphs of Equations in Two Variables; Intercepts; Symmetry</b>	<b>157</b>
	Graph Equations by Plotting Points • Find Intercepts from a Graph • Find Intercepts from an Equation • Test an Equation for Symmetry with Respect to the $x$ -Axis, the $y$ -Axis, and the Origin • Know How to Graph Key Equations	
<b>2.3</b>	<b>Lines</b>	<b>167</b>
	Calculate and Interpret the Slope of a Line • Graph Lines Given a Point and the Slope • Find the Equation of a Vertical Line • Use the Point–Slope Form of a Line; Identify Horizontal Lines • Find the Equation of a Line Given Two Points • Write the Equation of a Line in Slope–Intercept Form • Identify the Slope and $y$ -Intercept of a Line from Its Equation • Graph Lines Written in General Form Using Intercepts • Find Equations of Parallel Lines • Find Equations of Perpendicular Lines	
<b>2.4</b>	<b>Circles</b>	<b>182</b>
	Write the Standard Form of the Equation of a Circle • Graph a Circle • Work with the General Form of the Equation of a Circle	
<b>2.5</b>	<b>Variation</b>	<b>188</b>
	Construct a Model Using Direct Variation • Construct a Model Using Inverse Variation • Construct a Model Using Joint Variation or Combined Variation	
	<b>Chapter Review</b>	<b>194</b>
	<b>Chapter Test</b>	<b>196</b>
	<b>Cumulative Review</b>	<b>196</b>
	<b>Chapter Project</b>	<b>197</b>

<b>3</b>	<b>Functions and Their Graphs</b>	<b>198</b>
<b>3.1</b>	<b>Functions</b> Determine Whether a Relation Represents a Function • Find the Value of a Function • Find the Difference Quotient of a Function • Find the Domain of a Function Defined by an Equation • Form the Sum, Difference, Product, and Quotient of Two Functions	<b>199</b>
<b>3.2</b>	<b>The Graph of a Function</b> Identify the Graph of a Function • Obtain Information from or about the Graph of a Function	<b>214</b>
<b>3.3</b>	<b>Properties of Functions</b> Determine Even and Odd Functions from a Graph • Identify Even and Odd Functions from an Equation • Use a Graph to Determine Where a Function Is Increasing, Decreasing, or Constant • Use a Graph to Locate Local Maxima and Local Minima • Use a Graph to Locate the Absolute Maximum and the Absolute Minimum • Use a Graphing Utility to Approximate Local Maxima and Local Minima and to Determine Where a Function Is Increasing or Decreasing • Find the Average Rate of Change of a Function	<b>223</b>
<b>3.4</b>	<b>Library of Functions; Piecewise-defined Functions</b> Graph the Functions Listed in the Library of Functions • Graph Piecewise-defined Functions	<b>237</b>
<b>3.5</b>	<b>Graphing Techniques: Transformations</b> Graph Functions Using Vertical and Horizontal Shifts • Graph Functions Using Compressions and Stretches • Graph Functions Using Reflections about the $x$ -Axis and the $y$ -Axis	<b>247</b>
<b>3.6</b>	<b>Mathematical Models: Building Functions</b> Build and Analyze Functions	<b>260</b>
	<b>Chapter Review</b>	<b>266</b>
	<b>Chapter Test</b>	<b>270</b>
	<b>Cumulative Review</b>	<b>271</b>
	<b>Chapter Projects</b>	<b>271</b>
<b>4</b>	<b>Linear and Quadratic Functions</b>	<b>273</b>
<b>4.1</b>	<b>Properties of Linear Functions and Linear Models</b> Graph Linear Functions • Use Average Rate of Change to Identify Linear Functions • Determine Whether a Linear Function Is Increasing, Decreasing, or Constant • Build Linear Models from Verbal Descriptions	<b>274</b>
<b>4.2</b>	<b>Building Linear Models from Data</b> Draw and Interpret Scatter Diagrams • Distinguish between Linear and Nonlinear Relations • Use a Graphing Utility to Find the Line of Best Fit	<b>284</b>
<b>4.3</b>	<b>Quadratic Functions and Their Properties</b> Graph a Quadratic Function Using Transformations • Identify the Vertex and Axis of Symmetry of a Quadratic Function • Graph a Quadratic Function Using Its Vertex, Axis, and Intercepts • Find a Quadratic Function Given Its Vertex and One Other Point • Find the Maximum or Minimum Value of a Quadratic Function	<b>290</b>
<b>4.4</b>	<b>Build Quadratic Models from Verbal Descriptions and from Data</b> Build Quadratic Models from Verbal Descriptions • Build Quadratic Models from Data	<b>302</b>

<b>4.5 Inequalities Involving Quadratic Functions</b>	<b>312</b>
Solve Inequalities Involving a Quadratic Function	
<b>Chapter Review</b>	<b>315</b>
<b>Chapter Test</b>	<b>318</b>
<b>Cumulative Review</b>	<b>319</b>
<b>Chapter Projects</b>	<b>320</b>

## **5 Polynomial and Rational Functions 321**

<b>5.1 Polynomial Functions and Models</b>	<b>322</b>
Identify Polynomial Functions and Their Degree • Graph Polynomial Functions Using Transformations • Identify the Real Zeros of a Polynomial Function and Their Multiplicity • Analyze the Graph of a Polynomial Function • Build Cubic Models from Data	
<b>5.2 Properties of Rational Functions</b>	<b>343</b>
Find the Domain of a Rational Function • Find the Vertical Asymptotes of a Rational Function • Find the Horizontal or Oblique Asymptote of a Rational Function	
<b>5.3 The Graph of a Rational Function</b>	<b>353</b>
Analyze the Graph of a Rational Function • Solve Applied Problems Involving Rational Functions	
<b>5.4 Polynomial and Rational Inequalities</b>	<b>368</b>
Solve Polynomial Inequalities • Solve Rational Inequalities	
<b>5.5 The Real Zeros of a Polynomial Function</b>	<b>375</b>
Use the Remainder and Factor Theorems • Use Descartes' Rule of Signs to Determine the Number of Positive and the Number of Negative Real Zeros of a Polynomial Function • Use the Rational Zeros Theorem to List the Potential Rational Zeros of a Polynomial Function • Find the Real Zeros of a Polynomial Function • Solve Polynomial Equations • Use the Theorem for Bounds on Zeros • Use the Intermediate Value Theorem	
<b>5.6 Complex Zeros; Fundamental Theorem of Algebra</b>	<b>390</b>
Use the Conjugate Pairs Theorem • Find a Polynomial Function with Specified Zeros • Find the Complex Zeros of a Polynomial Function	
<b>Chapter Review</b>	<b>396</b>
<b>Chapter Test</b>	<b>399</b>
<b>Cumulative Review</b>	<b>399</b>
<b>Chapter Projects</b>	<b>400</b>

## **6 Exponential and Logarithmic Functions 402**

<b>6.1 Composite Functions</b>	<b>403</b>
Form a Composite Function • Find the Domain of a Composite Function	
<b>6.2 One-to-One Functions; Inverse Functions</b>	<b>411</b>
Determine Whether a Function Is One-to-One • Determine the Inverse of a Function Defined by a Map or a Set of Ordered Pairs • Obtain the Graph of the Inverse Function from the Graph of the Function • Find the Inverse of a Function Defined by an Equation	
<b>6.3 Exponential Functions</b>	<b>423</b>
Evaluate Exponential Functions • Graph Exponential Functions • Define the Number $e$ • Solve Exponential Equations	

<b>6.4</b>	<b>Logarithmic Functions</b>	<b>440</b>
	Change Exponential Statements to Logarithmic Statements and Logarithmic Statements to Exponential Statements • Evaluate Logarithmic Expressions • Determine the Domain of a Logarithmic Function • Graph Logarithmic Functions • Solve Logarithmic Equations	
<b>6.5</b>	<b>Properties of Logarithms</b>	<b>452</b>
	Work with the Properties of Logarithms • Write a Logarithmic Expression as a Sum or Difference of Logarithms • Write a Logarithmic Expression as a Single Logarithm • Evaluate Logarithms Whose Base Is Neither 10 Nor $e$	
<b>6.6</b>	<b>Logarithmic and Exponential Equations</b>	<b>461</b>
	Solve Logarithmic Equations • Solve Exponential Equations • Solve Logarithmic and Exponential Equations Using a Graphing Utility	
<b>6.7</b>	<b>Financial Models</b>	<b>468</b>
	Determine the Future Value of a Lump Sum of Money • Calculate Effective Rates of Return • Determine the Present Value of a Lump Sum of Money • Determine the Rate of Interest or the Time Required to Double a Lump Sum of Money	
<b>6.8</b>	<b>Exponential Growth and Decay Models; Newton's Law; Logistic Growth and Decay Models</b>	<b>478</b>
	Find Equations of Populations That Obey the Law of Uninhibited Growth • Find Equations of Populations That Obey the Law of Decay • Use Newton's Law of Cooling • Use Logistic Models	
<b>6.9</b>	<b>Building Exponential, Logarithmic, and Logistic Models from Data</b>	<b>489</b>
	Build an Exponential Model from Data • Build a Logarithmic Model from Data • Build a Logistic Model from Data	
	<b>Chapter Review</b>	<b>497</b>
	<b>Chapter Test</b>	<b>502</b>
	<b>Cumulative Review</b>	<b>502</b>
	<b>Chapter Projects</b>	<b>503</b>

## **7 Analytic Geometry** **506**

<b>7.1</b>	<b>Conics</b>	<b>507</b>
	Know the Names of the Conics	
<b>7.2</b>	<b>The Parabola</b>	<b>508</b>
	Analyze Parabolas with Vertex at the Origin • Analyze Parabolas with Vertex at $(h, k)$ • Solve Applied Problems Involving Parabolas	
<b>7.3</b>	<b>The Ellipse</b>	<b>517</b>
	Analyze Ellipses with Center at the Origin • Analyze Ellipses with Center at $(h, k)$ • Solve Applied Problems Involving Ellipses	
<b>7.4</b>	<b>The Hyperbola</b>	<b>527</b>
	Analyze Hyperbolas with Center at the Origin • Find the Asymptotes of a Hyperbola • Analyze Hyperbolas with Center at $(h, k)$ • Solve Applied Problems Involving Hyperbolas	
	<b>Chapter Review</b>	<b>540</b>
	<b>Chapter Test</b>	<b>541</b>
	<b>Cumulative Review</b>	<b>541</b>
	<b>Chapter Projects</b>	<b>542</b>

<b>8</b>	<b>Systems of Equations and Inequalities</b>	<b>543</b>
<b>8.1</b>	<b>Systems of Linear Equations: Substitution and Elimination</b> Solve Systems of Equations by Substitution • Solve Systems of Equations by Elimination • Identify Inconsistent Systems of Equations Containing Two Variables • Express the Solution of a System of Dependent Equations Containing Two Variables • Solve Systems of Three Equations Containing Three Variables • Identify Inconsistent Systems of Equations Containing Three Variables • Express the Solution of a System of Dependent Equations Containing Three Variables	<b>544</b>
<b>8.2</b>	<b>Systems of Linear Equations: Matrices</b> Write the Augmented Matrix of a System of Linear Equations • Write the System of Equations from the Augmented Matrix • Perform Row Operations on a Matrix • Solve a System of Linear Equations Using Matrices	<b>559</b>
<b>8.3</b>	<b>Systems of Linear Equations: Determinants</b> Evaluate 2 by 2 Determinants • Use Cramer's Rule to Solve a System of Two Equations Containing Two Variables • Evaluate 3 by 3 Determinants • Use Cramer's Rule to Solve a System of Three Equations Containing Three Variables • Know Properties of Determinants	<b>574</b>
<b>8.4</b>	<b>Matrix Algebra</b> Find the Sum and Difference of Two Matrices • Find Scalar Multiples of a Matrix • Find the Product of Two Matrices • Find the Inverse of a Matrix Solve a System of Linear Equations Using an Inverse Matrix	<b>584</b>
<b>8.5</b>	<b>Partial Fraction Decomposition</b> Decompose $\frac{P}{Q}$ Where $Q$ Has Only Nonrepeated Linear Factors • Decompose $\frac{P}{Q}$ Where $Q$ Has Repeated Linear Factors • Decompose $\frac{P}{Q}$ Where $Q$ Has a Nonrepeated Irreducible Quadratic Factor • Decompose $\frac{P}{Q}$ Where $Q$ Has a Repeated Irreducible Quadratic Factor	<b>601</b>
<b>8.6</b>	<b>Systems of Nonlinear Equations</b> Solve a System of Nonlinear Equations Using Substitution • Solve a System of Nonlinear Equations Using Elimination	<b>609</b>
<b>8.7</b>	<b>Systems of Inequalities</b> Graph an Inequality • Graph a System of Inequalities	<b>618</b>
<b>8.8</b>	<b>Linear Programming</b> Set Up a Linear Programming Problem • Solve a Linear Programming Problem	<b>625</b>
	<b>Chapter Review</b>	<b>632</b>
	<b>Chapter Test</b>	<b>636</b>
	<b>Cumulative Review</b>	<b>637</b>
	<b>Chapter Projects</b>	<b>637</b>

<b>9</b>	<b>Sequences; Induction; the Binomial Theorem</b>	<b>639</b>
9.1	<b>Sequences</b> Write the First Several Terms of a Sequence • Write the Terms of a Sequence Defined by a Recursive Formula • Use Summation Notation • Find the Sum of a Sequence	<b>640</b>
9.2	<b>Arithmetic Sequences</b> Determine Whether a Sequence Is Arithmetic • Find a Formula for an Arithmetic Sequence • Find the Sum of an Arithmetic Sequence	<b>650</b>
9.3	<b>Geometric Sequences; Geometric Series</b> Determine Whether a Sequence Is Geometric • Find a Formula for a Geometric Sequence • Find the Sum of a Geometric Sequence • Determine Whether a Geometric Series Converges or Diverges • Solve Annuity Problems	<b>656</b>
9.4	<b>Mathematical Induction</b> Prove Statements Using Mathematical Induction	<b>667</b>
9.5	<b>The Binomial Theorem</b> Evaluate $\binom{n}{j}$ • Use the Binomial Theorem	<b>671</b>
	<b>Chapter Review</b>	<b>677</b>
	<b>Chapter Test</b>	<b>680</b>
	<b>Cumulative Review</b>	<b>680</b>
	<b>Chapter Projects</b>	<b>681</b>
<b>10</b>	<b>Counting and Probability</b>	<b>682</b>
10.1	<b>Counting</b> Find All the Subsets of a Set • Count the Number of Elements in a Set • Solve Counting Problems Using the Multiplication Principle	<b>683</b>
10.2	<b>Permutations and Combinations</b> Solve Counting Problems Using Permutations Involving $n$ Distinct Objects • Solve Counting Problems Using Combinations • Solve Counting Problems Using Permutations Involving $n$ Nondistinct Objects	<b>688</b>
10.3	<b>Probability</b> Construct Probability Models • Compute Probabilities of Equally Likely Outcomes • Find Probabilities of the Union of Two Events • Use the Complement Rule to Find Probabilities	<b>697</b>
	<b>Chapter Review</b>	<b>707</b>
	<b>Chapter Test</b>	<b>709</b>
	<b>Cumulative Review</b>	<b>710</b>
	<b>Chapter Projects</b>	<b>710</b>

# Three Distinct Series

Students have different goals, learning styles, and levels of preparation. Instructors have different teaching philosophies, styles, and techniques. Rather than write one series to fit all, the Sullivans have written three distinct series. All share the same goal—to develop a high level of mathematical understanding and an appreciation for the way mathematics can describe the world around us. The manner of reaching that goal, however, differs from series to series.

## Contemporary Series, Tenth Edition

The Contemporary Series is the most traditional in approach yet modern in its treatment of precalculus mathematics. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: *College Algebra*, *Algebra & Trigonometry*, *Trigonometry: A Unit Circle Approach*, *Precalculus*.

## Enhanced with Graphing Utilities Series, Sixth Edition

This series provides a thorough integration of graphing utilities into topics, allowing students to explore mathematical concepts and encounter ideas usually studied in later courses. Using technology, the approach to solving certain problems differs from the Contemporary Series, while the emphasis on understanding concepts and building strong skills does not: *College Algebra*, *Algebra & Trigonometry*, *Precalculus*.

## Concepts through Functions Series, Third Edition

This series differs from the others, utilizing a functions approach that serves as the organizing principle tying concepts together. Functions are introduced early in various formats. This approach supports the Rule of Four, which states that functions are represented symbolically, numerically, graphically, and verbally. Each chapter introduces a new type of function and then develops all concepts pertaining to that particular function. The solutions of equations and inequalities, instead of being developed as stand-alone topics, are developed in the context of the underlying functions. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: *College Algebra*; *Precalculus, with a Unit Circle Approach to Trigonometry*; *Precalculus, with a Right Triangle Approach to Trigonometry*.

# The Contemporary Series

## College Algebra, Tenth Edition

This text provides a contemporary approach to college algebra, with three chapters of review material preceding the chapters on functions. Graphing calculator usage is provided, but is optional. After completing this book, a student will be adequately prepared for trigonometry, finite mathematics, and business calculus.

## Algebra & Trigonometry, Tenth Edition

This text contains all the material in *College Algebra*, but also develops the trigonometric functions using a right triangle approach and showing how it relates to the unit circle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Graphing calculator usage is provided, but is optional. After completing this book, a student will be adequately prepared for finite mathematics, business calculus, and engineering calculus.

## Precalculus, Tenth Edition

This text contains one review chapter before covering the traditional precalculus topic of functions and their graphs, polynomial and rational functions, and exponential and logarithmic functions. The trigonometric functions are introduced using a unit circle approach and showing how it relates to the right triangle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Graphing calculator usage is provided, but is optional. The final chapter provides an introduction to calculus, with a discussion of the limit, the derivative, and the integral of a function. After completing this book, a student will be adequately prepared for finite mathematics, business calculus, and engineering calculus.

## Trigonometry: a Unit Circle Approach, Tenth Edition

This text, designed for stand-alone courses in trigonometry, develops the trigonometric functions using a unit circle approach and showing how it relates to the right triangle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Graphing calculator usage is provided, but is optional. After completing this book, a student will be adequately prepared for finite mathematics, business calculus, and engineering calculus.

# Preface to the Instructor

**A**s a professor of mathematics at an urban public university for 35 years, I understand the varied needs of College Algebra students. Students range from being underprepared, with little mathematical background and a fear of mathematics, to being highly prepared and motivated. For some, this is their final course in mathematics. For others, it is preparation for future mathematics courses. I have written this text with both groups in mind.

A tremendous benefit of authoring a successful series is the broad-based feedback I receive from teachers and students who have used previous editions. I am sincerely grateful for their support. Virtually every change to this edition is the result of their thoughtful comments and suggestions. I hope that I have been able to take their ideas and, building upon a successful foundation of the ninth edition, make this series an even better learning and teaching tool for students and teachers.

## Features in the Tenth Edition

A descriptive list of the many special features of *College Algebra* can be found on the endpapers in the front of this text.

This list places the features in their proper context, as building blocks of an overall learning system that has been carefully crafted over the years to help students get the most out of the time they put into studying. Please take the time to review this and to discuss it with your students at the beginning of your course. My experience has been that when students utilize these features, they are more successful in the course.

## New to the Tenth Edition

- **Retain Your Knowledge** This new category of problems in the exercise set are based on the article “To Retain New Learning, Do the Math” published in the *Educati Review*. In this article, Kevin Washburn suggests that “the more students are required to recall new content or skills, the better their memory will be.” It is frustrating when students cannot recall skills learned earlier in the course. To alleviate this recall problem, we have created “Retain Your Knowledge” problems. These are problems considered to be “final exam material” that students can use to maintain their skills. All the answers to these problems appear in the back of the text, and all are programmed in MyMathLab.
- **Guided Lecture Notes** Ideal for online, emporium/redesign courses, inverted classrooms, or traditional lecture classrooms. These lecture notes help students take thorough, organized, and understandable notes as they watch the Author in Action videos. They ask students to complete definitions, procedures, and examples based on the content of the videos and text. In addition, experience suggests that students learn by doing and understanding the why/how of the concept or

property. Therefore, many sections will have an exploration activity to motivate student learning. These explorations introduce the topic and/or connect it to either a real-world application or a previous section. For example, when the vertical-line test is discussed in Section 3.2, after the theorem statement, the notes ask the students to explain why the vertical-line test works by using the definition of a function. This challenge helps students process the information at a higher level of understanding.

- **Illustrations** Many of the figures now have captions to help connect the illustrations to the explanations in the body of the text.
- **TI Screen Shots** In this edition all the screen shots from the ninth edition have been replaced with screen shots using a TI-84Plus C. These updated screen shots help students visualize concepts clearly and help make stronger connections between equations, data, and graphs in full color.
- **Chapter Projects**, which apply the concepts of each chapter to a real-world situation, have been enhanced to give students an up-to-the-minute experience. Many projects are new and Internet-based, requiring the student to research information online in order to solve problems.
- **Exercise Sets** All the exercises in the text have been reviewed and analyzed for this edition, some have been removed, and new ones have been added. All time-sensitive problems have been updated to the most recent information available. The problem sets remain classified according to purpose.

The “*Are You Prepared?*” problems have been improved to better serve their purpose as a just-in-time review of concepts that the student will need to apply in the upcoming section.

The **Concepts and Vocabulary** problems have been expanded and now include multiple-choice exercises. Together with the fill-in-the-blank and True/False problems, these exercises have been written to serve as reading quizzes.

**Skill Building** problems develop the student’s computational skills with a large selection of exercises that are directly related to the objectives of the section. **Mixed Practice** problems offer a comprehensive assessment of skills that relate to more than one objective. Often these require skills learned earlier in the course.

**Applications and Extensions** problems have been updated. Further, many new application-type exercises have been added, especially ones involving information and data drawn from sources the student will recognize, to improve relevance and timeliness.

The **Explaining Concepts: Discussion and Writing** exercises have been improved and expanded to provide more opportunity for classroom discussion and group projects.

New to this edition, *Retain Your Knowledge* exercises consist of a collection of four problems in each exercise set that are based on material learned earlier in the course. They serve to keep information that has already been learned “fresh” in the mind of the student. Answers to all these problems appear in the Student Edition.

The *Review Exercises* in the Chapter Review have been streamlined, but they remain tied to the clearly expressed objectives of the chapter. Answers to all these problems appear in the Student Edition.

- **Annotated Instructor’s Edition** As a guide, the author’s suggestions for homework assignments are indicated by a blue underscore below the problem number. These problems are assignable in the MyMathLab as part of a “Ready-to-Go” course.

## Content Changes in the Tenth Edition

- **Section 3.1** The objective Find the Difference Quotient of a Function has been added.
- **Section 5.1** The subsection Behavior of the Graph of a Polynomial Function Near a Zero has been removed.
- **Section 5.3** A subsection has been added that discusses the role of multiplicity of the zeros of the denominator of a rational function as it relates to the graph near a vertical asymptote.
- **Section 5.5** The objective Use Descartes’ Rule of Signs has been included.
- **Section 5.5** The theorem Bounds on the Zeros of a Polynomial Function is now based on the traditional method of using synthetic division.

## Using the Tenth Edition Effectively with Your Syllabus

To meet the varied needs of diverse syllabi, this text contains more content than is likely to be covered in a *College Algebra* course. As the chart illustrates, this text has been organized with flexibility of use in mind. Within a given chapter, certain sections are optional (see the details that follow the figure below) and can be omitted without loss of continuity.

### Chapter R Review

This chapter consists of review material. It may be used as the first part of the course or later as a just-in-time review when

the content is required. Specific references to this chapter occur throughout the text to assist in the review process.

### Chapter 1 Equations and Inequalities

Primarily a review of Intermediate Algebra topics, this material is a prerequisite for later topics. The coverage of complex numbers and quadratic equations with a negative discriminant is optional and may be postponed or skipped entirely without loss of continuity.

### Chapter 2 Graphs

This chapter lays the foundation for functions. Section 2.5 is optional.

### Chapter 3 Functions and Their Graphs

Perhaps the most important chapter. Section 3.6 is optional.

### Chapter 4 Linear and Quadratic Functions

Topic selection depends on your syllabus. Sections 4.2 and 4.4 may be omitted without loss of continuity.

### Chapter 5 Polynomial and Rational Functions

Topic selection depends on your syllabus.

### Chapter 6 Exponential and Logarithmic Functions

Sections 6.1–6.6 follow in sequence. Sections 6.7, 6.8, and 6.9 are optional.

### Chapter 7 Analytic Geometry

Sections 7.1–7.4 follow in sequence.

### Chapter 8 Systems of Equations and Inequalities

Sections 8.2–8.7 may be covered in any order, but each requires Section 8.1. Section 8.8 requires Section 8.7.

### Chapter 9 Sequences; Induction; The Binomial Theorem

There are three independent parts: Sections 9.1–9.3; Section 9.4; and Section 9.5.

### Chapter 10 Counting and Probability

The sections follow in sequence.

## Acknowledgments

Textbooks are written by authors, but evolve from an idea to final form through the efforts of many people. It was Don Dellen who first suggested this text and series to me. Don is remembered for his extensive contributions to publishing and mathematics.

Thanks are due to the following people for their assistance and encouragement to the preparation of this edition:

- From Pearson Education: Anne Kelly for her substantial contributions, ideas, and enthusiasm; Dawn Murrin, for her unmatched talent at getting the details right; Joseph Colella for always getting the reviews and pages to me on time; Peggy McMahon for directing the always difficult production process; Rose Kernan for handling liaison between the compositor and author; Peggy Lucas for her genuine interest in marketing this text;

Chris Hoag for her continued support and genuine interest; Greg Tobin for his leadership and commitment to excellence; and the Pearson Math and Science Sales team, for their continued confidence and personal support of my texts.

- Accuracy checkers: C. Brad Davis, who read the entire manuscript and accuracy checked answers. His

attention to detail is amazing; Timothy Britt, for creating the Solutions Manuals and accuracy checking answers.

Finally, I offer my grateful thanks to the dedicated users and reviewers of my texts, whose collective insights form the backbone of each textbook revision.

# Resources for Success

## MyMathLab<sup>®</sup> Online Course (access code required)

MyMathLab delivers **proven results** in helping individual students succeed. It provides **engaging experiences** that personalize, stimulate, and measure learning for each student. And it comes from an **experienced partner** with educational expertise and an eye on the future. MyMathLab helps prepare students and gets them thinking more conceptually and visually through the following features:

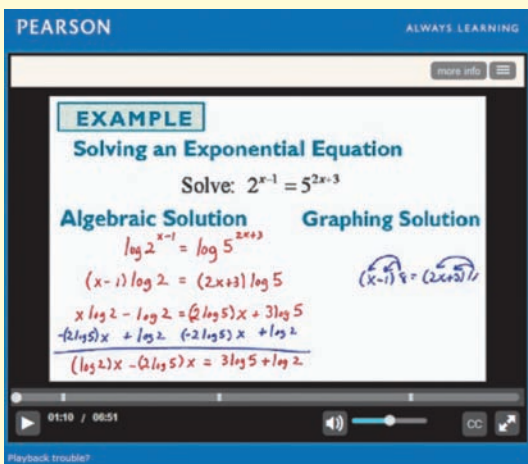

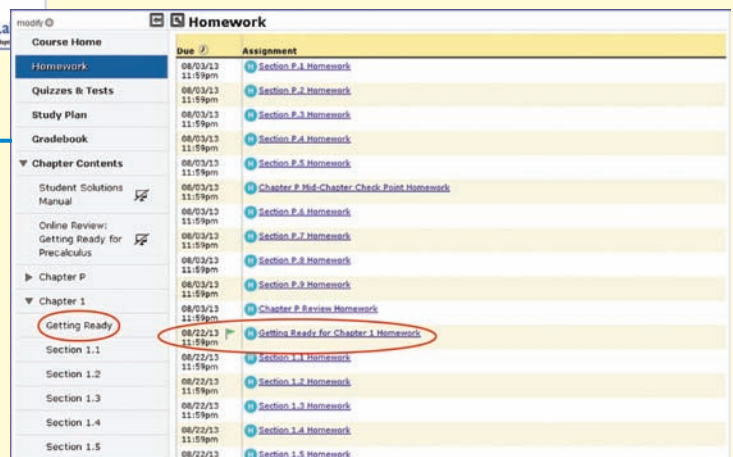

### Adaptive Study Plan

The Study Plan makes studying more efficient and effective for every student. Performance and activity are assessed continually in real time. The data and analytics are used to provide personalized content-reinforcing concepts that target each student's strengths and weaknesses.

### Getting Ready

Students refresh prerequisite topics through assignable skill review quizzes and personalized homework integrated in MyMathLab.

### Video Assessment

Video assessment is tied to key Author in Action videos to check students' conceptual understanding of important math concepts.

### Enhanced Graphing Functionality

New functionality within the graphing utility allows graphing of 3-point quadratic functions, 4-point cubic graphs, and transformations in exercises.

**Skills for Success Modules** are integrated within the MyMathLab course to help students succeed in collegiate courses and prepare for future professions.

**Retain Your Knowledge** These new exercises support ongoing review at the course level and help students maintain essential skills.

## Instructor Resources

Additional resources can be downloaded from [www.pearsonhighered.com](http://www.pearsonhighered.com) or hardcopy resources can be ordered from your sales representative.

### Ready to Go MyMathLab® Course

Now it is even easier to get started with MyMathLab. The Ready to Go MyMathLab course option includes author-chosen preassigned homework, integrated review, and more.

### TestGen®

TestGen® ([www.pearsoned.com/testgen](http://www.pearsoned.com/testgen)) enables instructors to build, edit, print, and administer tests using a computerized bank of questions developed to cover all the objectives of the text.

### PowerPoint® Lecture Slides

Fully editable slides correlated with the text.

### Annotated Instructor's Edition

Shorter answers are on the page beside the exercises. Longer answers are in the back of the text.

### Instructor Solutions Manual

Includes fully worked solutions to all exercises in the text.

### Mini Lecture Notes

Includes additional examples and helpful teaching tips, by section.

### Online Chapter Projects

Additional projects that give students an opportunity to apply what they learned in the chapter.

## Student Resources

Additional resources to enhance student success:

### Lecture Video

Author in Action videos are actual classroom lectures with fully worked out examples presented by Michael Sullivan, III. All video is assignable within MyMathlab.

### Chapter Test Prep Videos

Students can watch instructors work through step-by-step solutions to all chapter test exercises from the text. These are available in MyMathlab and on YouTube.

### Student Solutions Manual

Provides detailed worked-out solutions to odd-numbered exercises.

### Guided Lecture Notes

These lecture notes assist students in taking thorough, organized, and understandable notes while watching Author in Action videos. Students actively participate in learning the how/why of important concepts through explorations and activities. The Guided Lecture Notes are available as PDF's and customizable Word files in MyMathLab. They can also be packaged with the text and the MyMathLab access code.

### Algebra Review

Four chapters of Intermediate Algebra review. Perfect for a slower-paced course or for individual review.

*This page intentionally left blank*

# Applications Index

## Acoustics

amplifying sound, 500  
loudness of sound, 451  
whispering galleries, 523–524

## Aeronautics

*Challenger* disaster, 488

## Agriculture

farm management, 631  
farm workers in U.S., 487  
field enclosure, 616  
milk production, 494  
minimizing cost, 631  
watering a field, 102

## Air travel

distance between two planes, 262  
flight time and ticket price, 289  
parking at O'Hare International Airport,  
245

## Archaeology

age of ancient tools, 480–481  
age of fossil, 486  
age of tree, 486  
date of prehistoric man's death, 500

## Architecture

brick staircase, 655, 679  
Burj Khalifa building, 31  
floor design, 653–654, 679  
football stadium seating, 655  
mosaic design, 655, 679  
Norman window, 37, 309  
parabolic arch, 309  
racetrack design, 526  
special window, 309, 317  
stadium construction, 655  
window design, 309  
window dimensions, 102

## Art

framing a painting, 146

## Astronomy

distance from Earth to its moon, 29  
distances of planets from Sun, 649  
light-year, 29  
planetary orbits  
Earth, 526  
elliptical, 526  
Jupiter, 526  
Mars, 526  
Pluto, 526

## Aviation

orbital launches, 556

## Biology

alcohol and driving, 447, 452  
bacterial growth, 479–480, 493  
E-coli, 235, 275  
blood types, 687–688  
bone length, 317–318  
cricket chirp rate and temperature, 311  
healing of wounds, 437, 451  
maternal age versus Down syndrome, 290  
yeast biomass as function of time, 492

## Business

advertising, 318  
automobile production, 409, 572  
blending coffee, 141  
candy bar size, 103  
checkout lines, 706  
clothing store, 708  
commissions, 317  
cookie orders, 635  
copying machines, 146  
cost  
of can, 364, 367  
of commodity, 410  
of manufacturing, 29, 141, 374, 624–625  
marginal, 301, 317  
minimizing, 317, 631, 636  
of printing, 337  
of production, 234, 409, 599, 636  
of transporting goods, 246  
cost equation, 180, 192  
cost function, 282  
average, 217  
demand  
for candy, 192  
demand equation, 317, 400  
depreciation, 402  
discount pricing, 91, 92, 410  
drive-thru rate  
at Burger King, 433  
at Citibank, 437, 451  
at McDonald's, 438  
equipment depreciation, 665  
ethanol production, 493  
expense computation, 142  
farm workers in U.S., 487  
Jiffy Lube's car arrival rate, 437, 451  
managing a meat market, 631  
milk production, 494  
mixing candy, 141  
mixing nuts, 141  
orange juice production, 572  
precision ball bearings, 29  
presale orders, 556  
price markup, 91  
of new car, 129  
product design, 632  
production scheduling, 631  
product promotion, 181  
profit, 599–600  
maximizing, 629–630, 631–632  
profit function, 213  
rate of return on, 475  
restaurant management, 556  
revenue, 141, 301, 314–315  
airline, 632  
of clothing store, 589  
daily, 301  
from digital music, 259  
from football seating, 666  
maximizing, 301, 308  
monthly, 301  
theater, 557  
revenue equation, 192  
RV rental, 318–319  
salary, 410, 655  
gross, 212  
increases in, 665, 679  
sales  
commission on, 128–129  
of movie theater ticket, 544, 548–549,  
556  
net, 156  
salvage value, 500  
straight-line depreciation, 278–279, 282  
supply and demand, 279–280, 282  
tax, 374  
theater attendance, 92  
toy truck manufacturing, 624–625  
transporting goods, 625  
truck rentals, 180, 282–283  
unemployment, 709  
wages  
of car salesperson, 180  
hourly, 89, 91

## Calculus

absolute maximum/minimum in, 228  
area under a curve, 234, 260  
asymptotes in, 346–347  
average rate of change in, 230  
cylinder inscribed in a cone, 264  
cylinder inscribed in a sphere, 264  
difference quotient in, 205–206, 212, 439,  
460  
*ex in*, 431–432  
expression as single quotient in, 77  
expressions with rational exponents in, 77  
factoring in, 54, 58, 80  
filling conical tank, 265  
functions approximated by polynomial  
functions in, 342  
increasing/decreasing functions in,  
225–226  
inequalities involving absolute value in,  
134

infinite geometric series, 660  
 infinite limits, 332  
 Intermediate Value Theorem, 384, 385  
 limit notation in, 660  
 limits at infinity, 332  
 local maxima/minima in, 227  
 open box construction, 265  
 partial fraction decomposition, 602  
 quadratic equations in, 99–100, 102  
 reducing expression to lowest terms in, 72  
 secant line in, 231  
 Simpson's rule, 309  
 wire into geometric shapes, 264

### **Carpentry. *See also* Construction**

pitch, 182

### **Chemistry, 91**

alpha particles, 539  
 decomposition reactions, 487  
 drug concentration, 366  
 gas laws, 193  
 mixing acids, 146  
 pH, 450  
 purity of gold, 142  
 radioactive decay, 486, 493–494, 500, 632  
 radioactivity from Chernobyl, 487  
 reactions, 309  
 salt solutions, 142, 146  
 sugar molecules, 142  
 volume of gas, 128

### **Combinatorics**

airport codes, 689  
 binary codes, 708  
 birthday permutations, 691, 695, 696,  
 702–703, 707, 708–709  
 blouses and skirts combinations, 687  
 book arrangements, 695  
 box stacking, 695  
 code formation, 695  
 combination locks, 696  
 committee formation, 693, 695–696, 708  
 Senate committees, 696  
 flag arrangement, 694, 708  
 gender composition of children in family,  
 700  
 letter codes, 689  
 license plate possibilities, 695, 708, 709  
 lining up people, 690, 695  
 number formation, 687, 695, 696, 709  
 objects selection, 696  
 seating arrangements, 708  
 shirts and ties combinations, 687  
 telephone numbers, 708  
 two-symbol codewords, 686  
 word formation, 693–694, 696, 709

### **Communications**

cell phone towers, 495  
 installing cable TV, 265  
 international call plan, 283  
 phone charges, 282

satellite dish, 513–514, 515  
 spreading of rumors, 437, 451  
 tablet service, 245  
 wireless data plan, 198, 234–235, 271–272

### **Computers and computing**

comparing tablets, 103  
 graphics, 600–601  
 households owning computers, 487  
 Internet searches, 112  
 iPod storage capacity, 283  
 laser printers, 142  
 three-click rule, 600  
 website design, 600  
 website map, 600  
 Word users, 487

### **Construction**

of border around a garden, 103  
 of border around a pool, 103  
 of box, 99–100, 102, 616  
   closed, 269  
   open, 265  
 of brick staircase, 679  
 of can, 398  
 of coffee can, 143  
 of cylindrical tube, 616  
 of enclosures  
   around garden, 142  
   around pond, 142  
   maximizing area of, 304, 308, 317  
 of fencing, 304, 308, 317, 616  
   minimum cost for, 366  
 of flashlight, 515  
 of headlight, 515  
 installing cable TV, 265  
 patio dimensions, 103  
 of rain gutter, 309  
 of ramp  
   access ramp, 181  
 of rectangular field enclosure, 308  
 of stadium, 309, 655  
 of steel drum, 367  
 of swimming pool, 37, 38  
 TV dish, 515  
 vent pipe installation, 526

### **Cryptography**

matrices in, 600

### **Decorating**

Christmas tree, 32

### **Demographics**

birth rate  
   age of mother and, 311  
   of unmarried women, 301  
 diversity index, 450  
 divorced population, 306–307  
 marital status, 688  
 mosquito colony growth, 486  
 population. *See* Population  
 rabbit colony growth, 648

### **Design**

of box with minimum surface area, 367

### **Direction**

of fireworks display, 538  
 of lightning strikes, 538

### **Distance**

Bermuda Triangle, 38  
 bicycle riding, 222  
 of explosion, 539  
 height  
   of bouncing ball, 665, 679  
   of Great Pyramid of Cheops, 38  
   of Mt. Everest, 29  
 from home, 222  
 of hot-air balloon  
   from intersection, 156  
   from intersection, 264  
 limiting magnitude of telescope, 500  
 pendulum swings, 661, 665  
 range of airplane, 143  
 of search and rescue, 146  
 sound to measure, 118–119  
 stopping, 213, 301, 422  
 of storm, 145  
 traveled by wheel, 37  
 between two moving vehicles, 156  
   toward intersection, 264  
 between two planes, 262  
 visibility of Gibb's Hill Lighthouse beam,  
 38  
 visual, 38  
 walking, 222

### **Economics**

Consumer Price Index (CPI), 477  
 demand equations, 400  
 federal stimulus package of 2009, 476  
 inflation, 476  
 IS-LM model in, 557  
 marginal propensity to consume, 666  
 multiplier, 666  
 national debt, 235  
 participation rate, 213  
 per capita federal debt, 476  
 poverty rates, 341  
 poverty threshold, 157  
 relative income of child, 600  
 unemployment, 709

### **Education**

age distribution of community college,  
 709  
 college costs, 476, 665  
 college tuition and fees, 599  
 computing grades, 129  
 degrees awarded, 685  
   doctorates, 706  
 faculty composition, 707  
 field trip, 374  
 fraternity purchase, 103  
 funding a college education, 500

GPA and work relationship, 103  
 grades, 91  
 learning curve, 438, 451  
 maximum level achieved, 637–638  
 median earnings and level of, 103  
 multiple-choice test, 695  
 probability of acceptance to college, 709  
 spring break, 631  
 student loan, 270  
   interest on, 599  
 true/false test, 695  
 video games and grade-point average, 289

### Electricity, 91

cost of, 243  
 current in *RC* circuit, 438  
 current in *RL* circuit, 438, 451  
 impedance, 112  
 Kirchhoff's Rules, 557, 573  
 Ohm's law, 126  
 parallel circuits, 112  
   resistance in, 352  
 rates for, 129, 180  
 resistance, 70, 72, 193, 196, 352  
 voltage  
   foreign, 29  
   household, 133  
   U.S., 29

### Electronics. *See also Computers and computing*

microphones, 166

### Energy

nuclear power plant, 538–539  
 solar, 166  
 solar heat, 516  
 thermostat control, 259

### Engineering

bridges  
   Golden Gate, 305–306  
   parabolic arch, 317, 516  
   semielliptical arch, 525, 526, 541  
   suspension, 309, 515–516  
 crushing load, 119  
 Gateway Arch (St. Louis), 516  
 grade  
   of mountain trail, 617  
   of road, 182  
 horsepower, 193  
 maximum weight supportable by pine, 190  
 safe load for a beam, 193  
 searchlight, 516, 540–541  
 whispering galleries, 525

### Entertainment

*Demon Roller Coaster* customer rate, 438  
 theater revenues, 557

### Environment

endangered species, 437  
 lake pollution control laws, 648  
 oil leakage, 409

### Finance, 91. *See also Investment(s)*

balancing a checkbook, 29  
 bills in wallet, 709  
 cable rates, 494  
 clothes shopping, 637  
 college costs, 476, 665  
 computer system purchase, 475  
 cost  
   of car, 92, 180  
   of car rental, 246  
   of electricity, 243  
   of fast food, 556  
   minimizing, 317, 366  
   of natural gas, 245  
   of pizza, 92  
   of printing, 337  
   of trans-Atlantic travel, 212–213, 221  
 cost equation, 192  
 cost function, 282  
 cost minimization, 301  
 credit cards  
   balance on, 609  
   debt, 648  
   interest on, 475  
   payment, 246, 648  
 depreciation, 437  
   of car, 467, 503  
 discounts, 410  
 division of money, 88, 91  
 effective rate of interest, 472  
 electricity rates, 180  
 federal stimulus package of 2009, 476  
 financial planning, 136–137, 556, 569–570, 572  
 foreign exchange, 410  
 fraternity purchase, 103  
 funding a college education, 500  
 future value of money, 341–342  
 gross salary, 212  
 income versus crime rate, 496  
 inheritance, 146  
 life cycle hypothesis, 310  
 loans, 141  
   car, 648  
   interest on, 81, 136, 145, 147–148, 270, 599  
   repayment of, 475  
   student, 599  
 median earnings and level of education, 103  
 mortgages, 477  
   fees, 246  
   interest rates on, 476  
   payments, 189, 192, 196  
   second, 476  
 price appreciation of homes, 475  
 refunds, 557  
 revenue equation, 192

revenue maximization, 301, 302–304, 308  
 rich man's promise, 666  
 salary options, 666  
 sales commission, 128–129  
 saving  
   for a car, 475  
   for a home, 665  
 savings accounts interest, 475  
 selling price of a home, 197  
 sinking fund, 665  
 taxes, 282  
   e-filing returns, 235  
   federal income, 246, 410, 422  
   luxury, 282  
 truck rentals, 281  
 used-car purchase, 475  
 water bills, 129

### Food and nutrition

animal, 632  
 calories, 92  
 candy, 288  
 color mix of candy, 709  
 cooler contents, 709  
 cooling time of pizza, 486  
 fast food, 556, 558  
 Girl Scout cookies, 706  
 hospital diet, 558, 572  
 ice cream, 631  
 “light” foods, 129  
 number of possible meals, 685–686  
 raisins, 288–289  
 soda and hot dogs buying combinations, 283  
 warming time of beer stein, 487

### Forestry

wood product classification, 485

### Games

coin toss, 699  
 die rolling, 698–699, 700, 709  
 grains of wheat on a chess board, 666  
 lottery, 709, 710–711

### Gardens and gardening. *See also Landscaping*

border around, 103  
 enclosure for, 142

### Geology

earthquakes, 452

### Geometry

balloon volume, 409  
 circle  
   area of, 141  
   center of, 188  
   circumference of, 28, 141  
   equation of, 583  
   inscribed in square, 263  
   radius of, 188, 616  
 collinear points, 583

cone volume, 193, 410  
 cube  
   length of edge of, 389  
   surface area of, 29  
   volume of, 29  
 cylinder  
   inscribing in cone, 264  
   inscribing in sphere, 264  
   volume of, 193, 410  
 Descartes's method of equal roots, 616–617  
 equation of line, 583  
 polygon  
   area of, 583  
   diagonals of, 103  
 Pythagorean Theorem, 102  
 rectangle  
   area of, 28, 212, 261–262, 269  
   dimensions of, 92, 102, 146, 616  
   inscribed in circle, 263  
   inscribed in ellipse, 526  
   inscribed in semicircle, 263  
   perimeter of, 28  
   semicircle inscribed in, 264  
 sphere  
   surface area of, 28  
   volume of, 28  
 square  
   area of, 37, 141  
   diagonals of, 156  
   perimeter of, 141  
 surface area  
   of balloon, 409  
   of cube, 29  
   of sphere, 28  
 triangle  
   area of, 28, 583  
   equilateral, 28, 156  
   inscribed in circle, 264  
   isosceles, 212, 616  
   medians of, 155  
   Pascal's, 648  
   perimeter of, 28

### Government

federal debt, 235  
   per capita, 476  
 federal income tax, 213, 246, 410, 422  
   e-filing returns, 235  
 federal stimulus package of 2009, 476  
 federal tax withholding, 129  
 first-class mail, 247

### Health. *See also* Medicine

age versus total cholesterol, 495  
 cigarette use among teens, 181  
 exercising, 129  
 expenditures on, 213  
 heartbeats during exercise, 276–277  
 ideal body weight, 422  
 life cycle hypothesis, 310  
 life expectancy, 128

### Home improvement. *See also* Construction

painting a house, 558

### Housing

apartment rental, 310  
 number of rooms in, 212  
 price appreciation of homes, 475

### Investment(s), 88, 91, 141, 145

annuity, 662–663, 665

## A Look Ahead ●●●

Chapter R, as the title states, contains review material. Your instructor may choose to cover all or part of it as a regular chapter at the beginning of your course or later as a just-in-time review when the content is required. Regardless, when information in this chapter is needed, a specific reference to this chapter will be made so you can review.

## Outline

- R.1** Real Numbers
- R.2** Algebra Essentials
- R.3** Geometry Essentials
- R.4** Polynomials
- R.5** Factoring Polynomials
- R.6** Synthetic Division
- R.7** Rational Expressions
- R.8**  $n$ th Roots; Rational Exponents

## R.1 Real Numbers

**PREPARING FOR THIS TEXT** Before getting started, read “To the Student” at the front of this text.

- OBJECTIVES**
- 1 Work with Sets (p. 2)
  - 2 Classify Numbers (p. 4)
  - 3 Evaluate Numerical Expressions (p. 8)
  - 4 Work with Properties of Real Numbers (p. 9)

### 1 Work with Sets

A **set** is a well-defined collection of distinct objects. The objects of a set are called its **elements**. By **well-defined**, we mean that there is a rule that enables us to determine whether a given object is an element of the set. If a set has no elements, it is called the **empty set**, or **null set**, and is denoted by the symbol  $\emptyset$ .

For example, the set of **digits** consists of the collection of numbers 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9. If we use the symbol  $D$  to denote the set of digits, then we can write

$$D = \{0, 1, 2, 3, 4, 5, 6, 7, 8, 9\}$$

In this notation, the braces  $\{ \}$  are used to enclose the objects, or **elements**, in the set. This method of denoting a set is called the **roster method**. A second way to denote a set is to use **set-builder notation**, where the set  $D$  of digits is written as

$$D = \{ \quad x \quad | \quad x \text{ is a digit} \}$$

Read as “ $D$  is the set of all  $x$  such that  $x$  is a digit.”

#### EXAMPLE 1

#### Using Set-builder Notation and the Roster Method

- (a)  $E = \{x | x \text{ is an even digit}\} = \{0, 2, 4, 6, 8\}$   
 (b)  $O = \{x | x \text{ is an odd digit}\} = \{1, 3, 5, 7, 9\}$

Because the elements of a set are distinct, we never repeat elements. For example, we would never write  $\{1, 2, 3, 2\}$ ; the correct listing is  $\{1, 2, 3\}$ . Because a set is a collection, the order in which the elements are listed is immaterial.  $\{1, 2, 3\}$ ,  $\{1, 3, 2\}$ ,  $\{2, 1, 3\}$ , and so on, all represent the same set.

If every element of a set  $A$  is also an element of a set  $B$ , then  $A$  is a **subset** of  $B$ , which is denoted  $A \subseteq B$ . If two sets  $A$  and  $B$  have the same elements, then  $A$  **equals**  $B$ , which is denoted  $A = B$ .

For example,  $\{1, 2, 3\} \subseteq \{1, 2, 3, 4, 5\}$  and  $\{1, 2, 3\} = \{2, 3, 1\}$ .

#### DEFINITION

If  $A$  and  $B$  are sets, the **intersection** of  $A$  with  $B$ , denoted  $A \cap B$ , is the set consisting of elements that belong to both  $A$  and  $B$ . The **union** of  $A$  with  $B$ , denoted  $A \cup B$ , is the set consisting of elements that belong to either  $A$  or  $B$ , or both.

#### EXAMPLE 2

#### Finding the Intersection and Union of Sets

Let  $A = \{1, 3, 5, 8\}$ ,  $B = \{3, 5, 7\}$ , and  $C = \{2, 4, 6, 8\}$ . Find:

- (a)  $A \cap B$       (b)  $A \cup B$       (c)  $B \cap (A \cup C)$

**Solution**

- (a)  $A \cap B = \{1, 3, 5, 8\} \cap \{3, 5, 7\} = \{3, 5\}$   
 (b)  $A \cup B = \{1, 3, 5, 8\} \cup \{3, 5, 7\} = \{1, 3, 5, 7, 8\}$   
 (c)  $B \cap (A \cup C) = \{3, 5, 7\} \cap [\{1, 3, 5, 8\} \cup \{2, 4, 6, 8\}]$   
 $= \{3, 5, 7\} \cap \{1, 2, 3, 4, 5, 6, 8\} = \{3, 5\}$

 **Now Work** PROBLEM 15

Usually, in working with sets, we designate a **universal set**  $U$ , the set consisting of all the elements that we wish to consider. Once a universal set has been designated, we can consider elements of the universal set not found in a given set.

**DEFINITION**

If  $A$  is a set, the **complement** of  $A$ , denoted  $\bar{A}$ , is the set consisting of all the elements in the universal set that are not in  $A$ .\*

**EXAMPLE 3****Finding the Complement of a Set**

If the universal set is  $U = \{1, 2, 3, 4, 5, 6, 7, 8, 9\}$  and if  $A = \{1, 3, 5, 7, 9\}$ , then  $\bar{A} = \{2, 4, 6, 8\}$ .

It follows from the definition of complement that  $A \cup \bar{A} = U$  and  $A \cap \bar{A} = \emptyset$ . Do you see why?

 **Now Work** PROBLEM 19

Figure 1 Venn diagram

It is often helpful to draw pictures of sets. Such pictures, called **Venn diagrams**, represent sets as circles enclosed in a rectangle, which represents the universal set. Such diagrams often help us to visualize various relationships among sets. See Figure 1.

If we know that  $A \subseteq B$ , we might use the Venn diagram in Figure 2(a). If we know that  $A$  and  $B$  have no elements in common—that is, if  $A \cap B = \emptyset$ —we might use the Venn diagram in Figure 2(b). The sets  $A$  and  $B$  in Figure 2(b) are said to be **disjoint**.

Figure 2

(a)  $A \subseteq B$   
subset(b)  $A \cap B = \emptyset$   
disjoint sets

Figures 3(a), 3(b), and 3(c) use Venn diagrams to illustrate the definitions of intersection, union, and complement, respectively.

Figure 3

(a)  $A \cap B$   
intersection(b)  $A \cup B$   
union(c)  $\bar{A}$   
complement

\*Some books use the notation  $A'$  for the complement of  $A$ .

## 2 Classify Numbers

It is helpful to classify the various kinds of numbers that we deal with as sets. The **counting numbers**, or **natural numbers**, are the numbers in the set  $\{1, 2, 3, 4, \dots\}$ . (The three dots, called an **ellipsis**, indicate that the pattern continues indefinitely.) As their name implies, these numbers are often used to count things. For example, there are 26 letters in our alphabet; there are 100 cents in a dollar. The **whole numbers** are the numbers in the set  $\{0, 1, 2, 3, \dots\}$ —that is, the counting numbers together with 0. The set of counting numbers is a subset of the set of whole numbers.

### DEFINITION

The **integers** are the set of numbers  $\{\dots, -3, -2, -1, 0, 1, 2, 3, \dots\}$ .

These numbers are useful in many situations. For example, if your checking account has \$10 in it and you write a check for \$15, you can represent the current balance as  $-\$5$ .

Each time we expand a number system, such as from the whole numbers to the integers, we do so in order to be able to handle new, and usually more complicated, problems. The integers enable us to solve problems requiring both positive and negative counting numbers, such as profit/loss, height above/below sea level, temperature above/below  $0^\circ\text{F}$ , and so on.

But integers alone are not sufficient for *all* problems. For example, they do not answer the question “What part of a dollar is 38 cents?” To answer such a question, we enlarge our number system to include *rational numbers*. For example,  $\frac{38}{100}$  answers the question “What part of a dollar is 38 cents?”

### DEFINITION

A **rational number** is a number that can be expressed as a quotient  $\frac{a}{b}$  of two integers. The integer  $a$  is called the **numerator**, and the integer  $b$ , which cannot be 0, is called the **denominator**. The rational numbers are the numbers in the set  $\left\{x \mid x = \frac{a}{b}, \text{ where } a, b \text{ are integers and } b \neq 0\right\}$ .

Examples of rational numbers are  $\frac{3}{4}$ ,  $\frac{5}{2}$ ,  $\frac{0}{4}$ ,  $-\frac{2}{3}$ , and  $\frac{100}{3}$ . Since  $\frac{a}{1} = a$  for any integer  $a$ , it follows that the set of integers is a subset of the set of rational numbers.

Rational numbers may be represented as **decimals**. For example, the rational numbers  $\frac{3}{4}$ ,  $\frac{5}{2}$ ,  $-\frac{2}{3}$ , and  $\frac{7}{66}$  may be represented as decimals by merely carrying out the indicated division:

$$\frac{3}{4} = 0.75 \quad \frac{5}{2} = 2.5 \quad -\frac{2}{3} = -0.666\dots = -0.\overline{6} \quad \frac{7}{66} = 0.1060606\dots = 0.1\overline{06}$$

Notice that the decimal representations of  $\frac{3}{4}$  and  $\frac{5}{2}$  terminate, or end. The decimal representations of  $-\frac{2}{3}$  and  $\frac{7}{66}$  do not terminate, but they do exhibit a pattern of repetition. For  $-\frac{2}{3}$ , the 6 repeats indefinitely, as indicated by the bar over the 6; for  $\frac{7}{66}$ , the block 06 repeats indefinitely, as indicated by the bar over the 06. It can be shown that every rational number may be represented by a decimal that either terminates or is nonterminating with a repeating block of digits, and vice versa.

On the other hand, some decimals do not fit into either of these categories. Such decimals represent **irrational numbers**. Every irrational number may be represented by a decimal that neither repeats nor terminates. In other words, irrational numbers cannot be written in the form  $\frac{a}{b}$ , where  $a, b$  are integers and  $b \neq 0$ .

Irrational numbers occur naturally. For example, consider the isosceles right triangle whose legs are each of length 1. See Figure 4. The length of the hypotenuse is  $\sqrt{2}$ , an irrational number.

Also, the number that equals the ratio of the circumference  $C$  to the diameter  $d$  of any circle, denoted by the symbol  $\pi$  (the Greek letter pi), is an irrational number. See Figure 5.

Figure 4

Figure 5  $\pi = \frac{C}{d}$ **DEFINITION**

The set of **real numbers** is the union of the set of rational numbers with the set of irrational numbers.

Figure 6 shows the relationship of various types of numbers.\*

Figure 6

**EXAMPLE 4****Classifying the Numbers in a Set**

List the numbers in the set

$$\left\{ -3, \frac{4}{3}, 0.12, \sqrt{2}, \pi, 10, 2.151515 \dots \text{(where the block 15 repeats)} \right\}$$

that are

- (a) Natural numbers                      (b) Integers                      (c) Rational numbers  
 (d) Irrational numbers                      (e) Real numbers

**Solution**

- (a) 10 is the only natural number.  
 (b)  $-3$  and 10 are integers.  
 (c)  $-3$ ,  $10$ ,  $\frac{4}{3}$ ,  $0.12$ , and  $2.151515 \dots$  are rational numbers.  
 (d)  $\sqrt{2}$  and  $\pi$  are irrational numbers.  
 (e) All the numbers listed are real numbers.

 **Now Work** PROBLEM 25

\*The set of real numbers is a subset of the set of complex numbers. We discuss complex numbers in Chapter 1, Section 1.3.

## Approximations

Every decimal may be represented by a real number (either rational or irrational), and every real number may be represented by a decimal.

In practice, the decimal representation of an irrational number is given as an approximation. For example, using the symbol  $\approx$  (read as “approximately equal to”), we can write

$$\sqrt{2} \approx 1.4142 \quad \pi \approx 3.1416$$

In approximating decimals, we either *round off* or *truncate* to a given number of decimal places.\* The number of places establishes the location of the *final digit* in the decimal approximation.

**Truncation:** Drop all of the digits that follow the specified final digit in the decimal.

**Rounding:** Identify the specified final digit in the decimal. If the next digit is 5 or more, add 1 to the final digit; if the next digit is 4 or less, leave the final digit as it is. Then truncate following the final digit.

### EXAMPLE 5

#### Approximating a Decimal to Two Places

Approximate 20.98752 to two decimal places by

- Truncating
- Rounding

#### Solution

For 20.98752, the final digit is 8, since it is two decimal places from the decimal point.

- To truncate, we remove all digits following the final digit 8. The truncation of 20.98752 to two decimal places is 20.98.
- The digit following the final digit 8 is the digit 7. Since 7 is 5 or more, we add 1 to the final digit 8 and truncate. The rounded form of 20.98752 to two decimal places is 20.99.

### EXAMPLE 6

#### Approximating a Decimal to Two and Four Places

Number	Rounded to Two Decimal Places	Rounded to Four Decimal Places	Truncated to Two Decimal Places	Truncated to Four Decimal Places
(a) 3.14159	3.14	3.1416	3.14	3.1415
(b) 0.056128	0.06	0.0561	0.05	0.0561
(c) 893.46125	893.46	893.4613	893.46	893.4612

#### Now Work PROBLEM 29

## Calculators

Calculators are incapable of displaying decimals that contain a large number of digits. For example, some calculators are capable of displaying only eight digits. When a number requires more than eight digits, the calculator either truncates or rounds.

\* Sometimes we say “correct to a given number of decimal places” instead of “truncate.”

To see how your calculator handles decimals, divide 2 by 3. How many digits do you see? Is the last digit a 6 or a 7? If it is a 6, your calculator truncates; if it is a 7, your calculator rounds.

There are different kinds of calculators. An **arithmetic** calculator can only add, subtract, multiply, and divide numbers; therefore, this type is not adequate for this course. **Scientific** calculators have all the capabilities of arithmetic calculators and also contain **function keys** labeled  $\ln$ ,  $\log$ ,  $\sin$ ,  $\cos$ ,  $\tan$ ,  $x^y$ ,  $\text{inv}$ , and so on. As you proceed through this text, you will discover how to use many of the function keys. **Graphing** calculators have all the capabilities of scientific calculators and contain a screen on which graphs can be displayed.

For those who have access to a graphing calculator, we have included comments, examples, and exercises marked with a , indicating that a graphing calculator is required. We have also included an appendix that explains some of the capabilities of a graphing calculator. The  comments, examples, and exercises may be omitted without loss of continuity, if so desired.

## Operations

In algebra, we use letters such as  $x$ ,  $y$ ,  $a$ ,  $b$ , and  $c$  to represent numbers. The symbols used in algebra for the operations of addition, subtraction, multiplication, and division are  $+$ ,  $-$ ,  $\cdot$ , and  $/$ . The words used to describe the results of these operations are **sum**, **difference**, **product**, and **quotient**. Table 1 summarizes these ideas.

Operation	Symbol	Words
Addition	$a + b$	Sum: $a$ plus $b$
Subtraction	$a - b$	Difference: $a$ minus $b$
Multiplication	$a \cdot b$ , $(a) \cdot b$ , $a \cdot (b)$ , $(a) \cdot (b)$ , $ab$ , $(a)b$ , $a(b)$ , $(a)(b)$	Product: $a$ times $b$
Division	$a/b$ or $\frac{a}{b}$	Quotient: $a$ divided by $b$

In algebra, we generally avoid using the multiplication sign  $\times$  and the division sign  $\div$  so familiar in arithmetic. Notice also that when two expressions are placed next to each other without an operation symbol, as in  $ab$ , or in parentheses, as in  $(a)(b)$ , it is understood that the expressions, called **factors**, are to be multiplied.

We also prefer not to use mixed numbers in algebra. When mixed numbers are used, addition is understood; for example,  $2\frac{3}{4}$  means  $2 + \frac{3}{4}$ . In algebra, use of a mixed number may be confusing because the absence of an operation symbol between two terms is generally taken to mean multiplication. The expression  $2\frac{3}{4}$  is therefore written instead as 2.75 or as  $\frac{11}{4}$ .

The symbol  $=$ , called an **equal sign** and read as “equals” or “is,” is used to express the idea that the number or expression on the left of the equal sign is equivalent to the number or expression on the right.

### EXAMPLE 7

#### Writing Statements Using Symbols

- The sum of 2 and 7 equals 9. In symbols, this statement is written as  $2 + 7 = 9$ .
- The product of 3 and 5 is 15. In symbols, this statement is written as  $3 \cdot 5 = 15$ .

### 3 Evaluate Numerical Expressions

Consider the expression  $2 + 3 \cdot 6$ . It is not clear whether we should add 2 and 3 to get 5, and then multiply by 6 to get 30; or first multiply 3 and 6 to get 18, and then add 2 to get 20. To avoid this ambiguity, we have the following agreement.

**In Words**  
Multiply first, then add.

We agree that whenever the two operations of addition and multiplication separate three numbers, the multiplication operation will always be performed first, followed by the addition operation.

For  $2 + 3 \cdot 6$ , then, we have

$$2 + 3 \cdot 6 = 2 + 18 = 20$$

#### EXAMPLE 8

#### Finding the Value of an Expression

Evaluate each expression.

(a)  $3 + 4 \cdot 5$

(b)  $8 \cdot 2 + 1$

(c)  $2 + 2 \cdot 2$

**Solution**

(a)  $3 + 4 \cdot 5 = 3 + 20 = 23$

↑  
Multiply first

(b)  $8 \cdot 2 + 1 = 16 + 1 = 17$

↑  
Multiply first

(c)  $2 + 2 \cdot 2 = 2 + 4 = 6$

#### Now Work PROBLEM 53

When we want to indicate adding 3 and 4 and then multiplying the result by 5, we use parentheses and write  $(3 + 4) \cdot 5$ . Whenever parentheses appear in an expression, it means “perform the operations within the parentheses first!”

#### EXAMPLE 9

#### Finding the Value of an Expression

(a)  $(5 + 3) \cdot 4 = 8 \cdot 4 = 32$

(b)  $(4 + 5) \cdot (8 - 2) = 9 \cdot 6 = 54$

When we divide two expressions, as in

$$\frac{2 + 3}{4 + 8}$$

it is understood that the division bar acts like parentheses; that is,

$$\frac{2 + 3}{4 + 8} = \frac{(2 + 3)}{(4 + 8)}$$

#### Rules for the Order of Operations

1. Begin with the innermost parentheses and work outward. Remember that in dividing two expressions, we treat the numerator and denominator as if they were enclosed in parentheses.
2. Perform multiplications and divisions, working from left to right.
3. Perform additions and subtractions, working from left to right.

**EXAMPLE 10****Finding the Value of an Expression**

Evaluate each expression.

(a)  $8 \cdot 2 + 3$

(b)  $5 \cdot (3 + 4) + 2$

(c)  $\frac{2 + 5}{2 + 4 \cdot 7}$

(d)  $2 + [4 + 2 \cdot (10 + 6)]$

**Solution**

(a)  $8 \cdot 2 + 3 = 16 + 3 = 19$

↑  
Multiply first

(b)  $5 \cdot (3 + 4) + 2 = 5 \cdot 7 + 2 = 35 + 2 = 37$

↑  
Parentheses first↑  
Multiply before adding

(c)  $\frac{2 + 5}{2 + 4 \cdot 7} = \frac{2 + 5}{2 + 28} = \frac{7}{30}$

(d)  $2 + [4 + 2 \cdot (10 + 6)] = 2 + [4 + 2 \cdot (16)]$   
 $= 2 + [4 + 32] = 2 + [36] = 38$

Figure 7

Be careful if you use a calculator. For Example 10(c), you need to use parentheses. See Figure 7.\* If you don't, the calculator will compute the expression

$$2 + \frac{5}{2} + 4 \cdot 7 = 2 + 2.5 + 28 = 32.5$$

giving a wrong answer.

 **Now Work** PROBLEMS 59 AND 67

**4 Work with Properties of Real Numbers**

The equal sign is used to mean that one expression is equivalent to another. Four important properties of equality are listed next. In this list,  $a$ ,  $b$ , and  $c$  represent real numbers.

1. The **reflexive property** states that a number equals itself; that is,  $a = a$ .
2. The **symmetric property** states that if  $a = b$ , then  $b = a$ .
3. The **transitive property** states that if  $a = b$  and  $b = c$ , then  $a = c$ .
4. The **principle of substitution** states that if  $a = b$ , then we may substitute  $b$  for  $a$  in any expression containing  $a$ .

Now, let's consider some other properties of real numbers.

**EXAMPLE 11****Commutative Properties**

(a)  $3 + 5 = 8$

(b)  $2 \cdot 3 = 6$

$5 + 3 = 8$

$3 \cdot 2 = 6$

$3 + 5 = 5 + 3$

$2 \cdot 3 = 3 \cdot 2$

This example illustrates the **commutative property** of real numbers, which states that the order in which addition or multiplication takes place does not affect the final result.

\* Notice that we converted the decimal to its fraction form. Another option, when using a TI-84 Plus C, is to use the fraction template under the MATH button to enter the expression as it appears in Example 10(c). Consult your manual to see how to enter such expressions on your calculator.
