Contents

CHAPTER 1

What Is a Computer? 2

What Does a Computer Do? 4

- Objective 1** Explain the Functions of a Computer 4
Necessity Is the Mother of Invention 5

HOW TO Capture a Screenshot of Your Desktop 8

A Brief History of Computers 10

- Objective 2** Describe the Evolution of Computer
Hardware 10
History of Computers 11
Moore's Law 14

Bits and Bytes 16

- Objective 3** Describe How Computers Represent Data Using
Binary Code 16
Binary Code 17
Measuring Data 18

Let's Get Personal 20

- Objective 4** List the Various Types and Characteristics of
Personal Computers 20
Desktop Computers 21
Notebook Computers 22
MAC, PC, or Something Else? 23
Ergonomics 24

HOW TO Ergonomics 26

Beyond the Desktop 28

- Objective 5** Give Examples of Other Personal Computing
Devices 28
Mobile Devices 29
Video Game Systems and Simulations 30

Computing on a Large Scale 32

- Objective 6** List the Various Types and Characteristics of
Multiuser Computers 32
Servers 33
Supercomputers 34
Distributed and Grid Computing 36

Computers Are Everywhere 38

- Objective 7** Explain Ubiquitous Computing and
Convergence 38
Embedded Computers 39
Convergence 40

Objectives Recap 43

Key Terms 43

Summary 43

Application Projects 48

CHAPTER 2

Application Software 52

Making Business Work 54

- Objective 1** Identify Types and Uses of Business Productivity
Software 54
Office Suites 55
Other Types of Business Software 60

Making It Personal 64

- Objective 2** Identify Types and Uses of Personal
Software 64
Office Applications 65
Finance and Tax Preparation Software 66
Entertainment and Multimedia Software 67

Educational and Reference Software 69
Portable Apps 71

HOW TO Create a Document Using WordPad or TextEdit 72

Will It Run? 78

Objective 3 Assess a Computer System for Software Compatibility 78

Your System Specs 79
System Requirements 80

Where to Get It 82

Objective 4 Compare Various Ways of Obtaining Software 82

Licensing 83
Free or Fee 83
Sources of Software 84

Your Head in the Cloud 86

Objective 5 Discuss the Importance of Cloud Computing 86 Cloud Computing 87

HOW TO Create a Mobile App with Appy Pie 90

Managing Software on Your System 96

Objective 6 Install, Uninstall, and Update Software 96 Installing Software 97 Updating and Uninstalling Software 99

Objectives Recap 103
Key Terms 103
Summary 103
Application Projects 108

CHAPTER 3 **File Management 112**

A Place for Everything 114

Objective 1 Create Folders to Organize Files 114

Navigating Your Computer 115
Creating and Using Folders 119

HOW TO Organize Your Files 122

What's in a Name? 126

Objective 2 Explain the Importance of File Extensions 126 File Names and Extensions 127 File Properties 129

Back It Up 132

Objective 3 Explain the Importance of Backing Up Files 132

Windows File History 133
macOS Time Machine 133
Other Backup Software 134
BACKUP to the Cloud 134
Cloud Storage 135

Shrink It 138

Objective 4 Demonstrate How to Compress Files 138 Types of File Compression 139 Working with File Compression 140

HOW TO Create a Compressed (Zipped) Folder 142

It's Always in the Last Place You Look 144

Objective 5 Use Advanced Search Options to Locate Files 144

Using Windows to Search for Files 145
Searching in macOS 146
Using Boolean Logic to Refine Searches 147

That's Not the Program I Want to Open This File 148

Objective 6 Change the Default Program Associated with a File Type 148

Setting Program Defaults 149
Managing File Type Associations 150

Objectives Recap 153
Key Terms 153
Summary 153
Application Projects 158

CHAPTER 4

Hardware 162

The CPU: The Brains of the Operation 164

Objective 1 Explain the Functions of a CPU 164

- Instruction Cycle 165
- CPU Performance 166

Getting to Know Your System 170

Objective 2 Identify the Parts of a System Unit and Motherboard 170

- The Motherboard 171
- Ports and Connectors 172
- BIOS and MEMORY 174

A Place for Everything 176

Objective 3 Compare Storage Devices 176

- Optical Discs 177
- Flash Memory 178
- Hard Drives 179
- Disconnecting an External Drive 180

HOW TO Assess Your Computer Hardware 182

What Goes In . . . 184

Objective 4 List and Describe Common Input Devices 184

- Keyboards 185
- The Mouse and Other Pointing Devices 187
- Digital Cameras and Webcams 188
- Scanners 189
- Microphones and Game Controllers 191

. . . Must Come Out 192

Objective 5 List and Describe Essential Video and Audio Output Devices 192

- Video Output Devices 193
- Audio Output Devices 196

Pick a Printer 198

Objective 6 Compare Various Types of Printers 198

- Photo Printers, Inkjets, and Dye-Sublimation Printers 199
- Thermal and 3D Printers 199
- Laser Printers, Plotters, and Multifunction Devices 200

HOW TO Reduce Energy Consumption Using Power Settings 202

Adaptation: Making Technology Work for You 206

Objective 7 Explain and Provide Examples of Adaptive Technology 206

- Adaptive Technology 207

Communicate, Communicate, Communicate 210

Objective 8 Discuss Communication Devices 210

- Network Adapters 211
- Modems and Fax Devices 211

Objectives Recap 215

Key Terms 215

Summary 216

Application Projects 222

CHAPTER 5

System Software 226

Who's the Boss? 228

Objective 1 Explain What an Operating System Does 228

- Provides User Interface 229
- Manages Resources and Controls Hardware 230
- Interacts with Software 231

HOW TO Keep Your Desktop OS Up to Date 232

Desktop Operating Systems 236

Objective 2 Compare Desktop Operating Systems 236

- Windows 237
- macOS 238

Linux 240
Beta Software 241

Make Your OS Work for You 242

Objective 3 Configure a Desktop Operating System 242
Configuring Your OS 243
User Accounts 244

Something Special for You 246

Objective 4 Compare Specialized Operating Systems 246
Embedded Operating Systems 247

The NOS Knows 250

Objective 5 Compare the Most Common Network Operating Systems 250
What is an NOS? 251

Utilities You Should Use 254

Objective 6 List and Explain Important Utility Software 254
Why Use Disk Utilities? 255
Utilities for Disk Health 255
Security Software 259

Troubleshooting and Maintenance 260

Objective 7 Troubleshoot Common Computer Problems 260
Basic Troubleshooting Methods 261
Saving Energy and Extending Battery Life 262
Configuring Hardware 263

HOW TO Back Up Important Files 264

Objectives Recap 271
Key Terms 271
Summary 271
Application Projects 276

CHAPTER 6

Digital Devices and Multimedia 280

Digital Camera Basics 282

Objective 1 Explain the Features of Digital Cameras 282
Key Features 283
Types of Digital Cameras 285

Bridging the Gap: Transferring Photos 288

Objective 2 Compare Methods for Transferring Images from a Digital Camera 288
Memory Cards 289
Connecting via Cable 290
Wireless and Cloud Transfer 291

A Picture Is Worth a Thousand Words 292

Objective 3 Identify Several Ways to Edit and Print Photos 292
Editing Photos 293
Printing and Sharing Photos 294

HOW TO Edit a Photo Using the Windows Photos or macOS Photos App 298

Making Sense of Sound 304

Objective 4 Recognize Important Audio File Types 304
Audio File Types 305
Media Software 306
Speech Recognition 308

Lights, Camera, Action 310

Objective 5 Describe Several Ways to Create Videos 310
Videoconferencing, Webcasting, and Streaming Video 311
Sharing Video 313

HOW TO Create a Screen Capture Video Using Screencast-O-Matic 316

Technology on the Move 320

Objective 6 Compare Portable Media Players, Tablets, and Smartphones 320
Analog vs. Digital 321
Portable Media Players 321
Smartphones 322
Tablets 322

Objectives Recap 327
Key Terms 327
Summary 327
Application Projects 332

CHAPTER 7

The Internet 336

Internet Timeline 338

- Objective 1** Recognize the Importance of the Internet 338
 - How It All Got Started 339
 - World Wide Web 339
 - Internet2 340

Get Connected 342

- Objective 2** Compare Types of Internet Connections 342
 - How Do You Get Connected? 343
 - Access for All 347

Surf's Up 348

- Objective 3** Compare Popular Web Browsers 348
 - Browsers 349
 - Configuring Your Web Browser 352
 - Add-Ons, Plug-Ins, and Toolbars 353

HOW TO Use Google Drive 354

Navigating the Net 358

- Objective 4** Demonstrate How to Navigate the Web 358
 - Web Addresses 359
 - Smart Searching 361

HOW TO Create a Website Using Wix 364

Would I Lie to You? 372

- Objective 5** Discuss How to Evaluate the Credibility of Information Found on the Web 372
 - Who Wrote It? 373
 - What About the Design? 374

Objectives Recap 377

Key Terms 377

Summary 377

Application Projects 382

CHAPTER 8

Communicating and Sharing: The Social Web 386

Talk to Me 388

- Objective 1** Compare Different Forms of Synchronous Online Communication 388
 - Chat and IM 389
 - VoIP 391

Leave a Message 392

- Objective 2** Compare Different Forms of Asynchronous Online Communication 392
 - How do You Read and Send Email? 393
 - Parts of an Email Message 394
 - Text and Multimedia Messaging 396
 - Forums and Discussion Boards 397

There's a Place for Everyone . . . 398

- Objective 3** Discuss the Impact of Social Media in Society 398
 - Social Media 399
 - Social Video, Image, and Music Sites 401
 - Presenting Yourself Online 404

HOW TO Create a LinkedIn Profile 406

Get Your Word Out 410

- Objective 4** Locate User-Generated Content in the Form of a Blog or Podcast 410
 - Blogs 411
 - Podcasts 412
 - RSS 413
 - Crowdfunding 413

HOW TO Create a Blog with Blogger 414

The Wisdom of the Crowd 418

- Objective 5** Discuss How Wikis and Other Social Media Sites Rely on the Wisdom of the Crowd 418
 - Wikis 419
 - Social Review Sites 420
 - Social Bookmarking and News Sites 420

E-Commerce 422

Objective 6 Explain the Influence of Social Media on E-commerce 422

- Types of E-Commerce 423
- How Safe Is My Credit Card? 425

Online Tools for Business 426

Objective 7 Compare Social Media and Other Online Technologies Used in Business 426

- Facebook Pages 427
- Twitter 428
- Search Engines 429
- Digital Communication Tools 430
- Objectives Recap 435
- Key Terms 435
- Summary 435
- Application Projects 440

CHAPTER 9

Networks and Communication 444

From Sneakernet to Hotspots 446

Objective 1 Discuss the Importance of Computer Networks 446

- Peer-to-Peer Networks 447
- Client–Server Networks 449

HOW TO Examine Network and Sharing Settings 450

LANs and WANs 454

Objective 2 Compare Different Types of LANs and WANs 454

- Small Networks 455
- LAN Topologies 456
- Large Networks 457

Network Hardware 460

Objective 3 List and Describe the Hardware Used in Both Wired and Wireless Networks 460

- Network Adapters 461
- Network Connectivity Hardware 463

Software and Protocols 466

Objective 4 List and Describe Network Software and Protocols 466

- Peer-to-Peer Network Software 467
- Client–Server Network Software 469
- Network Protocols 470

HOW TO Check Your System Security Software 474

Protecting Your Network 478

Objective 5 Explain How to Protect a Network 478

- Layer 1: The Fence 479
- Layer 2: Door Locks 480
- Layer 3: Alarm Systems 481
- Layer 4: Guard Dogs 482

- Objective Recap 485
- Key Terms 485
- Summary 485
- Application Projects 490

CHAPTER 10

Security and Privacy 494

Cybercrime: They Are Out to Get You 496

Objective 1 Recognize Different Types of Cybercrime 496

- Personal Cybercrime 497
- Cybercrime against Organizations 500

HOW TO Configure Secure Browser Settings Using Google Chrome 502

Malware: Pick Your Poison 506

Objective 2 Differentiate between Various Types of Malware 506

- Spam and Cookies 507
- Adware and Spyware 508
- Viruses, Worms, Trojans, and Rootkits 509

Shields Up! 512

Objective 3 Explain How to Secure a Computer 512

Software 513
Hardware 515
Operating System 516

An Ounce of Prevention 518

Objective 4 Practice Safe Computing 518

User Accounts 519
Securing Accounts 520
Encryption 522
Safely Installing Software 523
Updating and Uninstalling Software 524
Acceptable Use Policies 525

HOW TO Secure a Microsoft Word Document 528

The Law Is on Your Side 534

Objective 5 Discuss Laws Related to Computer Security and Privacy 534

The Enforcers 535
Current Laws 535

Objectives Recap 539
Key Terms 539
Summary 539
Application Projects 544

CHAPTER 11

Databases 548

Database Basics 550

Objective 1 Identify the Parts of a Database 550

Tables, Fields, and Records 551
Forms, Queries, and Reports 552

A Database for Every Purpose 556

Objective 2 Compare the Four Types of Databases 556

Flat Databases 557
Relational Databases 557
Object-Oriented Databases 558
Multidimensional Databases 558

HOW TO Create a Form Using Google Drive 560

The Tools of the Trade 564

Objective 3 Explain Database Management Systems 564

Creating a Database 565
Data Validation 566
SQL 567
Output 568

HOW TO Create a Customer Database 570

Data In . . . Information Out 576

Objective 4 Discuss Important Types of Information Systems 576

Office Support Systems 577
Transaction Processing 577
Management Information Systems 578
Decision Support Systems 578
Business Intelligence and Big Data 579
Expert Systems and Artificial Intelligence 579

Real-World Databases 582

Objective 5 List Examples of Databases Used in Law Enforcement and Research 582

Law Enforcement 583
Science 585

Objectives Recap 589
Key Terms 589
Summary 589
Application Projects 594

CHAPTER 12

Program Development 598

Getting from Idea to Product 600

Objective 1 Describe the System Development Life Cycle 600

System Development Life Cycle (SDLC) 601
Other Development Models 605

Coding the System 608

Objective 2 Describe the Program Development Cycle 608

Program Development Cycle 609

HOW TO Create a Flowchart 614

Tools of the Trade 618

Objective 3 Compare Various Programming Languages 618

Programming Languages 619

Programming Tools 620

Web Programming 621

Mobile App Development 622

HOW TO Automate a Task by Using a Macro in Word 624

Artificial Intelligence 632

Objective 4 Explain the Term *Artificial Intelligence* 632

Applications 633

Expert Systems 633

Neural Networks 634

Objectives Recap 637

Glossary 650

Index 667

What's New in This Edition?

Visualizing Technology Sixth Edition

Visualizing Technology is a highly visual, engaging computer concepts textbook. Filled with all the important topics you need to cover, but unlike other textbooks, you won't find pages full of long paragraphs. Instead, you'll find a text written the way students are hardwired to think: it has smaller sections of text that use images creatively for easier understanding, and chapters are organized as articles with catchy headlines. The sixth edition continues to provide a hands-on approach to learning computer concepts in which students learn a little and then apply what they are learning in a project, simulation, or watch a Viz Clip video to dive deeper. Each chapter has two *How-To* projects focused on *Digital Literacy* and *Essential Job Skills* so that students are gaining the skills needed for professional and personal success. They learn about the important topics of ethics, green computing, and careers in every chapter. And, as technology continually evolves, so does the content. In this new edition, all of the content has been reviewed and updated to cover the latest technology, including Windows 10, macOS Sierra, and more coverage of troubleshooting and security.

The optimal way to experience *Visualizing Technology* is with MyITLab. All of the instruction, practice, review, and assessment resources are in one place, allowing you to arrange your course from an instructional perspective that gives students a consistent, measurable learning experience from chapter to chapter.

Highlights of What's New in This Edition

- New *Digital Competency* Badge offered through MyITLab
- New Pearson etext 2.0 provides an interactive and accessible learning experience
- Updated all content for currency

- Added a variety of Infographics to illustrate complex topics visually
- Updated Viz Clip videos as needed
- Added coverage of Windows 10, macOS Sierra
- Included more coverage of Troubleshooting and Security

INSTRUCTION

Prepare visual and kinesthetic learners with a variety of instructional resources

- **Pearson etext 2.0** provides an environment in which students can interact with the learning resources directly.
- **Viz Intro Videos** provide overview of chapter objectives.
- **Viz Clip Videos** dig deeper into key topics in a YouTube-like style.
- **PowerPoint Presentation** – to use for in-class, online lecture, or student review lecture.
- **Audio PowerPoint Presentations** deliver audio versions of PPTs—lecture option for online students.
- **TechBytes Weekly** provides ready-to-use current news articles, including discussion questions and course activities.

PRACTICE

Engage students with hands-on activities and simulations that demonstrate understanding

- **How-To Projects** provide two active-learning projects per chapter—a *Digital Literacy* Project and an *Essential Job Skill* Project. Each project focuses on skills students need for personal and professional success. Topics include basic website creation, mobile application creation, video creation, and using social media for brand marketing.
- **How-To Videos** show students how to complete the projects.
- **IT Simulations** provide 12 hands-on scenarios that students work through in an active learning environment to demonstrate understanding.
- **Windows 10 high-fidelity training simulations** allow students to explore Windows in a safe, guided environment that provides feedback and Learning Aids (Watch and Practice) if they need help.

REVIEW

Self-check and review resources keep learning on track

- **Viz Check Quiz Parts 1 & 2** provide a self-check of 3–4 objectives so that students can see how well they are learning the content. (Feeds grade to MIL gradebook.)
- **Viz Intro Videos** can also be used for review, as they provide an overview of what is covered in the chapter.
- **Other in-book, end-of-chapter projects and resources:** Mindmap Visual Review; Objective Recaps; Key Terms; Summary; Review Exercises—Multiple Choice, True or False, and Fill-in-the-Blank.

CHANGES BY CHAPTER

Chapter 1 What Is a Computer?

- Added coverage of Chromebooks

Chapter 2 Application Software

- Updated all software versions
- Added more coverage of Windows 10 Settings tools

Chapter 3 File Management

- Added Cortana and Siri

Chapter 4 Hardware

- Removed reference to obsolete connectors and ports
- Added Thunderbolt2

Chapter 5 System Software

- Added new objective - Troubleshooting and Maintenance

Chapter 6 Digital Devices and Multimedia

- Expanded discussion of digital assistants, added Amazon's Echo

Chapter 7 The Internet

- Updated to most recent browser versions
- Increased discussion of browser security

ASSESSMENT

Measure performance with ready-to-use resources

- **End-of-Chapter Quiz** is a comprehensive chapter quiz that covers all chapter objectives.
- **Application Projects** (MyITLab Grader project) are written to Windows 10 and Office 2016 and allow students to demonstrate productivity, competency, and critical thinking.
- **Testbank exam** contains customizable prebuilt, autograded, objective-based questions covering chapter objectives.
- **Other in-book, end-of-chapter projects and resources:** Running Project; Critical Thinking; Do-It-Yourself; Ethical Dilemma; On The Web; Collaboration.

Chapter 8 Communicating and Sharing: The Social Web

- Changed Objective 7 to cover online tools used in business
- Added SharePoint, Slack, and other tools

Chapter 9 Networks and Communication

- Added more information about antivirus software and malware
- Added more information about wireless security

Chapter 10 Security and Privacy

- Updated images

Chapter 11 Databases

- Updated images

Chapter 12 Program Development

- Added more coverage of Artificial Intelligence (AI)

Appendix A Microsoft® Office 2016 Applications Projects

Appendix B Using Mind Maps

Visual Walkthrough

VISUALIZING TECHNOLOGY HALLMARKS

- **Addresses visual and kinesthetic learners**—images help students to learn and retain content while hands-on projects allow students to practice and apply what they learned.
- **Easy to read**—it has the same amount of text as other concepts books but broken down into smaller chunks of text to aid in comprehension and retention.
- **Clear, easy-to-follow organization**—each chapter is broken into a series of articles that correspond to chapter objectives.
- **Highly visual**—students will want to read!

Learning Objectives clearly outlined in chapter opener and restated at the beginning of each article

Learning Outcomes are clearly defined at the beginning of each chapter.

Chapter Intro Video introduces the main concepts of the chapter

Explanation of the **Running Project** for that chapter

CHAPTER 2

Application Software

52

In This Chapter 

A computer is a programmable machine that converts raw data into useful information. Programming—in particular, **application software**—is what makes a computer a flexible and powerful tool. After reading this chapter, you will recognize various types of software applications for both business and personal use.

Objectives

- 1 Identify Types and Uses of Business Productivity Software
- 2 Identify Types and Uses of Personal Software
- 3 Assess a Computer System for Software Compatibility
- 4 Compare Various Ways of Obtaining Software
- 5 Discuss the Importance of Cloud Computing
- 6 Install, Uninstall, and Update Software

Running Project

In this chapter, you'll learn about different kinds of application software and how to obtain it. Look for instructions as you complete each article. For most articles, there's a series of questions for you to research. At the conclusion of this chapter, you'll submit your responses to the questions raised.

53

Catchy headlines begin each article

A Place for Everything

Objective

1

Create Folders to Organize Files

One of the most important things that you need to do when working with computers is called **file management**: opening, closing, saving, naming, deleting, and organizing digital files. In this article, we discuss organizing your digital files, creating new folders, and navigating through the folder structure of your computer.

114 CHAPTER 3

IT Simulations—take students through a hands-on activity covering a key topic in the chapter

The Windows Optimize Drives utility optimizes and defragments hard drives automatically on a weekly basis, and optimizes SSD drives monthly. You can also run it manually if you need to. Microsoft recommends that you defragment a drive

that's more than 10 percent fragmented. Figure 5.21 shows the Optimize Drives utility. Like the Disk Check utility, the Optimize Drives utility can be accessed from the Tools tab of the disk's Properties dialog box.

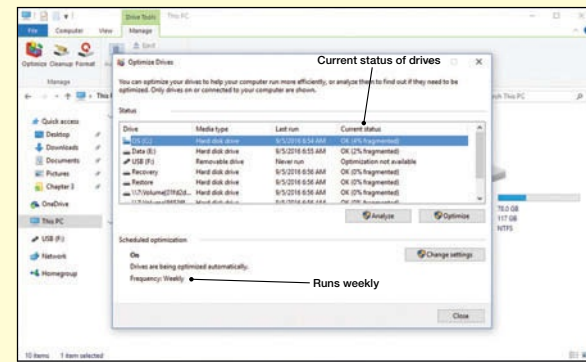

FIGURE 5.21 The Windows Optimize Drives utility is scheduled to run automatically.

FIND OUT MORE

Is defragmenting a hard disk really necessary? Some people say no. Use the Internet to research the controversy. Do you agree with the contention? Why or why not? What webpages did you find supporting this argument? What credentials does the author have that make you trust the information you found? Make sure you're using recent information.

Find Out More—prompts for additional research on a given topic

Images are used to represent concepts that help students learn and retain ideas

Green Computing provides eco-friendly tips for using technology

Moore's Law

In 1965, Intel cofounder Gordon Moore observed that the number of transistors that could be placed on an integrated circuit had doubled roughly every two years. This observation, known as **Moore's Law**, predicted this exponential growth would continue. The law was never intended to be a true measure, but rather an illustration, of the pace of technology advancement. The increase in the capabilities of integrated circuits directly affects the processing speed and storage capacity of modern electronic devices. As a result of new technologies, such as building 3D silicon processors or using carbon nanotubes in place of silicon (Figure 1.7), this pace held true for roughly 50 years, but by 2016 most experts agreed this pace is no longer viable. The increase in the capabilities of integrated circuits directly affects the processing speed and storage capacity of modern electronic devices.

Moore stated in a 1996 article, "More than anything, once something like this gets established, it becomes more or less a self-fulfilling prophecy. The Semiconductor Industry Association puts out a technology road map, which continues this

[generational improvement] every three years. Everyone in the industry recognizes that if you don't stay on essentially that curve they will fall behind. So it sort of drives itself." Thus, Moore's Law became a technology plan that guides the industry. Over the past several decades, the end of Moore's Law has been predicted. Each time, new technological advances have kept it going, but as new ideas and technologies have emerged, sticking to Moore's Law has become increasingly less practical or important. Moore himself admits that exponential growth can't continue forever.

In less than a century, computers have gone from being massive, unreliable, and costly machines to being an integral part of almost everything we do. As technology has improved, the size and costs have dropped as the speed, power, and reliability have grown. Today, the chip inside your cell phone has more processing power than the first microprocessor developed in 1971. Technology that was science fiction just a few decades ago is now commonplace.

GREEN COMPUTING

Smart Homes

The efficient and eco-friendly use of computers and other electronics is called **green computing**. Smart homes and smart appliances help save energy and, as a result, are good for both the environment and your pocketbook.

Smart homes use home automation to control lighting, heating and cooling, security, entertainment, and appliances. Such a system can be programmed to turn various components on and off at set times to maximize energy efficiency. So, the heat can turn up, and the house can be warm right before you get home from work, while not wasting the energy to keep it warm all day while you're away. If you're away on vacation or have to work late, you can remotely activate a smart home by phone or over the Internet. Some utility companies offer lower rates during off-peak hours, so programming your dishwasher and other appliances to run during those times can save you

money and help energy utility companies manage the power grid, potentially reducing the need for new power plants.

Can't make your home a smart home overnight? No worries! You can take some small steps without investing in an entire smart home system. Try installing a programmable thermostat, putting lights on timers or motion sensors, and running appliances during off-peak hours.

Smart appliances can monitor signals from the power company transmitted over the **smart grid**—a network for delivering electricity to consumers that includes communication technology to manage electricity distribution efficiently. When the electric grid system is stressed, smart appliances can react by reducing power consumption. Although these advances are called smart home technology, the same technologies can also be found in commercial buildings.

Adrian Sherwell/Alamy

Running Project

Use the Internet to look up current microprocessors. What companies produce them? Visit computer.howstuffworks.com/microprocessor.htm and read the article. How many transistors were found on the first home computer processor? What was the name of the processor, and when was it introduced?

5 Things You Need to Know	Key Terms														
<ul style="list-style-type: none"> ● First-generation computers used vacuum tubes. ● Second-generation computers used transistors. ● Third-generation computers used integrated circuits (chips). ● Fourth-generation computers use microprocessors. ● Moore's Law states that the number of transistors that can be placed on an integrated circuit doubles roughly every two years—although today it is closer to every 18 months. 	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">central processing unit (CPU)</td> <td style="padding: 2px;">microprocessor</td> </tr> <tr> <td style="padding: 2px;">ENIAC (Electronic Numerical Integrator and Computer)</td> <td style="padding: 2px;">Moore's Law</td> </tr> <tr> <td style="padding: 2px;">green computing</td> <td style="padding: 2px;">smart appliance</td> </tr> <tr> <td style="padding: 2px;">integrated circuit</td> <td style="padding: 2px;">smart grid</td> </tr> <tr> <td></td> <td style="padding: 2px;">smart home</td> </tr> <tr> <td></td> <td style="padding: 2px;">transistor</td> </tr> <tr> <td></td> <td style="padding: 2px;">vacuum tube</td> </tr> </table>	central processing unit (CPU)	microprocessor	ENIAC (Electronic Numerical Integrator and Computer)	Moore's Law	green computing	smart appliance	integrated circuit	smart grid		smart home		transistor		vacuum tube

Subtopics have same color background as main topics—makes it easy to follow each piece

Ethics boxes provide thought-provoking questions about the use of technology

Social Review Sites

Social review sites such as TripAdvisor let users review hotels, movies, games, books, and other products and services. Yelp allows users to review local businesses and places with physical addresses such as parks. Figure 8.23 shows a Yelp map of Times Square restaurants on the iPad app. The reviews are from regular people, not expert food critics, and can help you decide where to eat. You can use the Yelp app on a mobile device to get information when you are right in the area.

FIGURE 8.23 Searching for a Place to Eat in Times Square Using the Yelp App on an iPad

From Yelp Inc. Copyright © by Yelp Inc.

Three of the most popular social news sites are reddit, Digg, and Slashdot. Digg doesn't publish content but allows the community to submit content they discover on the web and puts it in one place for everyone to see and to discuss. reddit (Figure 8.25) allows community members to submit content and to vote that content up or down, as well as discuss it. reddit is organized into categories called subreddits. Celebrities often participate in AMA—ask me anything—interviews on reddit. Slashdot, which focuses primarily on technology topics, produces some content but also accepts submissions from its readers. Whatever your interests, there's probably a social news site for you.

FIGURE 8.25 reddit

© Digg and Community/Alamy

Social Bookmarking and News Sites

Social bookmarking sites allow you to save and share your bookmarks or favorites online. Pinterest allows you to create virtual corkboards around topics of interest and pin webpages to them (Figure 8.24). You can share your boards with others, and you can follow other people to see what they have pinned. StumbleUpon discovers websites based on your interests. When you sign up, you indicate topics that interest you. Then, as you visit websites, you can click the *StumbleUpon* button to be taken to a similar site. You can click *I like this* to improve the selection of pages you stumble onto. Delicious allows you to not only save and share your bookmarks online but also search the bookmarks of others. It's a great way to quickly find out what other people find interesting and important right now. The links are organized into topics, or tags, to make it easier for you to find links. You can click the *Follow* button if you have a Delicious account, but you don't need an account to browse Delicious.

FIGURE 8.24 Pinterest

© Brian Prazak/Alamy

Social news sites are different from traditional mass media news sites in that at least some of the content is submitted by users. Social news is interactive in a way that traditional media isn't. It's like having millions of friends sharing their finds with you. Content that's submitted more frequently or gets the most votes is promoted to the front page.

ETHICS

Some people create multiple accounts on social bookmarking and news sites so they can promote their own content. For example, a blogger might create several accounts on Digg and use each one to Digg a blog post, artificially raising its popularity on Digg and driving more traffic to it. This violates the Digg terms of use. But what if the blogger had all his friends and family members create accounts and Digg his post? Is it ethical? Does it violate the terms of use? Is it fair to other bloggers?

Running Project

Go to the Wikipedia article "Reliability of Wikipedia" at wikipedia.org/wiki/Reliability_of_Wikipedia. How does Wikipedia ensure that the content is correct? What procedures are in place to remove or correct mistakes? How does Wikipedia compare to other online sources of information?

3 Things You Need to Know	Key Terms
<ul style="list-style-type: none"> • Social media relies on the wisdom of the crowd rather than that of an expert. • Anybody can edit a wiki. • Social bookmarking and news sites help users find content that others recommend. 	<p>crowdsourcing</p> <p>social bookmarking site</p> <p>social news site</p> <p>social review site</p> <p>wiki</p>

Things You Need to Know—Key takeaway points are provided for each article
Key Terms—Students are reminded of the key terms they should understand after reading each article

How To?

Digital Literacy Skill

Capture a Screenshot of Your Desktop

HOW TO VIDEO

A useful skill is creating screen shots of your desktop. For example, it's helpful for providing directions on how to do something or for keeping a record of an error message that appears on your screen. Windows includes a program called the Snipping

Tool that you can use to capture a screenshot. Macs include the Grab tool.

The Windows Snipping Tool can capture four types of snips: Free-form, Rectangular, Window, or Full-screen. The Mac Grab tool can capture three types of grabs: Selection, Window, or Screen.

You can save your screenshots, email them, paste them into

documents, and annotate and highlight them. If necessary, download the student data files from pearsonhighered.com/viztech. From your student data files, open the `vt_ch01_howto1_answersheet` file and save the file as `lastname_firstname_ch01_howto1_answersheet`.

Students get prepared for professional and personal success with these **Digital Literacy** and **Essential Job Skills** How-To projects.

Career Spotlight—Each chapter provides an interesting career option based on chapter content

Facebook Pages

Unlike a Facebook profile, which is linked to a person, a Facebook Page is used to promote an organization, a product, or a service. A Facebook Page can have more than one administrator, so you can share the responsibilities among several people or departments. The Facebook Page for this textbook can be found at facebook.com/visualizingtechnology. A Page is public, so it can be viewed by anyone, even those who are not logged in to Facebook.

To create a Facebook Page, you need a personal Facebook account. Facebook's Terms of Service permit you to have only one personal Facebook account, but you can create multiple Facebook Pages. So, for example, a college representative might create a page for each department, club, or office. Once you are logged in to your personal account, the option *Create Page* can be found in the menu options. You can choose from several page categories (Figure 8.29). A page for a business or an organization will have

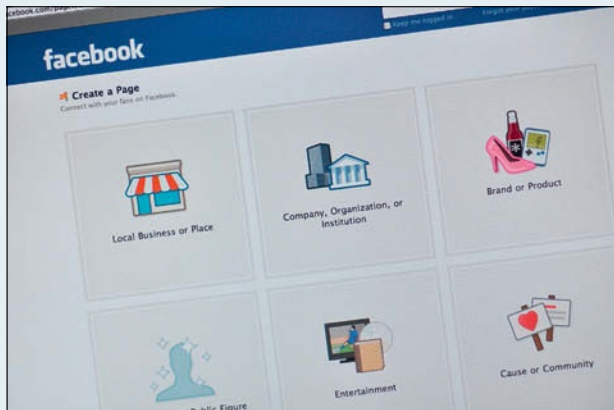

FIGURE 8.29 Create a Page Categories

CAREER SPOTLIGHT

SOFTWARE TRAINERS Software trainers—sometimes called corporate trainers—are in demand as companies deploy more software programs. This high-paying career may involve some travel and requires good computer skills, organization, and communication skills. Software trainers usually have at least a bachelor's degree and on-the-job training. Some companies offer train-the-trainer courses that can lead to certification. You might work for a training company, in the training department of a large company, or as a consultant to many companies.

Running Project

Research a game or program that you would like to run on your computer. What are the system requirements for the program? Does your computer meet the minimum requirements? In what ways does it exceed them?

3 Things You Need to Know <ul style="list-style-type: none">File Explorer can help you determine the drives and storage space available on your computer.You can find out your system specifications by using the System control panel or the About This Mac window.System requirements are the minimum requirements needed to run software and include hardware and software specifications.	KEY TERM <p>system requirements</p>

Viz Check—In MyITLab, take a quick quiz covering Objectives 1–3.

Viz Check quizzes—Each chapter includes two short online quizzes covering 3–5 objectives

How-To Projects—Each chapter provides two step-by-step projects, complete with visual instructions, to complete interesting and useful items

How-To Videos—Each How-To Project has a corresponding video walk-through of the project

How To? Create a Compressed (Zipped) Folder

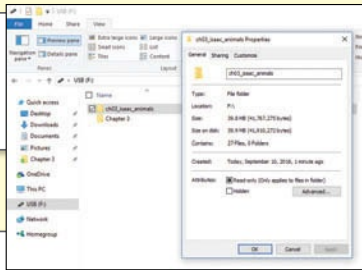

Essential Job Skill

HOW TO VIDEO
 Have you ever tried to email a bunch of photos to a friend? If you want to send more than a couple images, you usually wind up sending multiple messages. But you can compress the files into a single zipped folder and send them all at once. In this activity, you'll compress a folder that contains several files to make it easier to email them or to submit them electronically to your teacher.

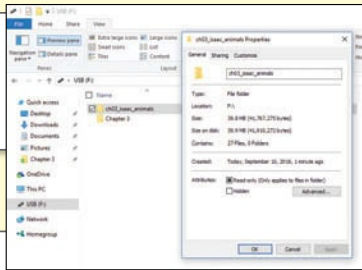

If necessary, download the student data files from pearsonhighered.com/viztech. From your student data files, open *vt_ch03_howto2_answersheet* and save it in your Chapter 3 folder as *lastname_firstname_ch03_howto2_answersheet*.

- 1

Use File Explorer to navigate to the student data files for this chapter. Locate the folder *ch03_isaac_animals*. Copy this folder to your flash drive by dragging the folder to your flash drive in the Navigation pane. If you are not using a flash drive, copy the *ch03_isaac_animals* folder to your Documents folder.

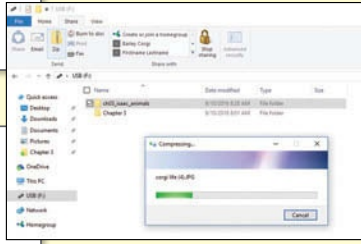

- 2

In the File Explorer Navigation pane, click your flash drive or Documents folder. Right-click the *ch03_isaac_animals* folder and click *Properties*. How big is the folder? How many files and folders does it contain? Close the Properties dialog box.

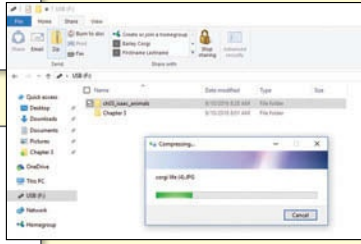

- 3

Select *ch03_isaac_animals*, click the *Share* tab, and then click *Zip to create a zipped archive*. Press **Enter** to accept the default file name.

- 4

Right-click the compressed folder and click *Properties*. Compare the size to the original folder. Take a screenshot of the open dialog box and paste it into your answer sheet. Type up your answers, save, and submit as directed by your instructor.

MAC

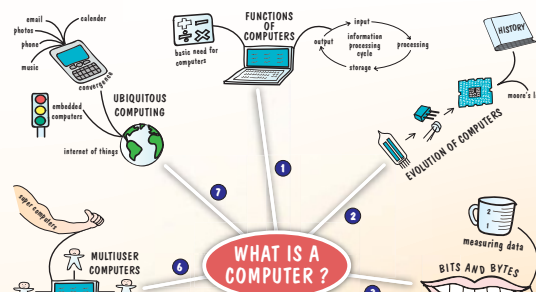

If you are using a Mac: From your student data files, open *vt_ch03_howto2_answersheet_mac* and save it in your Chapter 3 folder as *lastname_firstname_ch03_howto2_answersheet_mac*.

1. Open Finder and locate the student data files for this chapter. Copy the *ch03_isaac_animals* folder by dragging it to your flash drive. If you are not using a flash drive, copy the *ch03_isaac_animals* folder to your Documents folder.
2. Click the flash drive or Documents folder in the Sidebar and select the *ch03_isaac_animals* folder in the right pane. From the File menu, select *Get Info*. How big is the folder? How many files and folders does it contain?
3. Click the Info pane. From the File menu, select *Compress "ch03_isaac_animals"* to create a zipped archive.
4. Select the ZIP file and from the File menu, select *Get Info*. Compare the size to the original folder. Take a screenshot and paste it into your answer sheet. Type up your answers, save, and submit as directed by your instructor.

Mac coverage—Where appropriate, instructions and solutions are included so Mac users can complete the exercises

The **End-of-Chapter** content ranges from traditional review exercises to application and hands-on projects that have students working independently, collaboratively, and online

- universal design 25
- unmanned aircraft system (UAS) 41
- vacuum tube 11
- video game system 30
- volunteer computing 38
- wearable 29
- workstation 21

Summary

1. Explain the Functions of a Computer

A computer is a device that converts raw data into information using the information processing cycle. The four steps of the IPC are input, processing, storage, and output. Computers can be programmed to perform different tasks.

2. Describe the Evolution of Computer Hardware

The earliest computers used vacuum tubes, which are inefficient, large, and prone to failure. Second-generation computers used transistors, which are small electric switches. Third-generation computers used integrated circuits, which are silicon chips that contain multiple tiny transistors. Fourth-generation computers use microprocessors, which are complex integrated circuits that contain the central processing unit (CPU) of a computer.

Moore's Law states that the number of transistors that can be placed on an integrated circuit has doubled roughly every two years. The increase in the capabilities of integrated circuits directly affects the processing speed and storage capacity of modern electronic devices.

3. Describe How Computers Represent Data Using Binary Codes

A single bit (or switch) has two possible states—on or off—and can be used for situations with two possibilities such as yes/no or true/false. Digital data is represented by 8-bit binary code on most modern computers. The 8-bit ASCII system originally had binary codes for 256 characters. Unicode is an extended ASCII set that has codes for more than 100,000 characters.

Summary continues on the next page

End of Chapter 43

Summary continued

4. List the Various Types and Characteristics of Personal Computers

Personal computers include desktop computers, which offer the most speed, power, and upgradability for the lowest cost; workstations, which are high-end desktop computers; and all-in-ones, which are compact desktop computers with the computer case integrated into the monitor. Portable personal computers include notebooks and tablets.

5. Give Examples of Other Personal Computing Devices

Other computing devices include smartphones, wearables, GPS, video game systems, and simulators.

6. List the Various Types and Characteristics of Multiuser Computers

Multiuser computers allow multiple simultaneous users to connect to the system. They include servers, midrange servers,

mainframe computers, and enterprise servers. Supercomputers perform complex mathematical calculations. They perform a limited number of tasks as quickly as possible. Distributed computing uses the processing of multiple computers to perform complex tasks.

7. Explain Ubiquitous Computing and Convergence

Ubiquitous computing means the technology recedes into the background so you no longer notice it as you interact with it. The Internet of Things is the connection of the physical world to the Internet. Convergence is the integration of multiple technologies, such as cell phones, cameras, and MP3 players, on a single device.

9. _____ is a field of study in which information technology is applied to the field of biology.

- a. Bioinformatics
- b. Distributed computing
- c. Ergonomics
- d. Ubicomp

True or False

Answer the following questions with T for true or F for false for more practice with key terms and concepts from this chapter.

1. Computers convert data into information using the information processing cycle.
2. Third-generation computers used vacuum tubes.
3. Today's computers use transistors and integrated circuits.

10. A(n) _____ is an example of convergence.

- a. smart grid
- b. smartphone
- c. traffic light
- d. ubicomp

_____ 5. Unicode contains codes for most of the languages in use today.

6. Bioinformatics allows you to design a workspace for your comfort and health.
7. All-in-one is another name for a tablet computer.
8. Users connect to servers via clients.
9. Volunteer computing projects harness the idle processing power of hundreds or thousands of personal computers.

Multiple Choice

Answer the multiple-choice key terms and concepts list.

1. The _____ is a measure of intelligent behavior.
 - a. Analytical Engine
 - b. Artificial Intelligence
 - c. Bernoulli numbers problem
 - d. Turing test
2. First-generation computers used _____ .
 - a. integrated circuits
 - b. microprocessors
 - c. transistors
 - d. vacuum tubes
3. A(n) _____ is a complex central processing unit.
 - a. microprocessor
 - b. silicon
 - c. transistor
 - d. vacuum tube
4. What is the binary code language characters are made of?
 - a. ASCII
 - b. Base 2
 - c. International Standards Organization
 - d. Unicode

44 CHAPTER 1

Application Project

Office 2016 Application Projects

Word 2016: Intern Report

Project Description: In the following Microsoft Word project, you will create a letter telling your new boss about the things you have learned in this class. In the project you will enter and edit text, format text, insert graphics, check spelling and grammar, and create document footers. If necessary, download the student data files from pearsonhighered.com/Vitech.

Running Project ...

... The Finish Line

Use your answers from the previous sections of the chapter project to discuss the evolution of computers in the past few centuries. Write a report responding to the questions raised throughout the chapter project. Save your file as **lastname_firstname_ch01_project**, and submit it to your instructor as directed.

Do It Yourself 1

Consider the features available on the personal computing device that you use the most. From your student data files, open the file **vt_ch01_DIY1_answersheet** and save the file as **lastname_firstname_ch01_DIY1_answersheet**.

What device did you choose? Is it a desktop, notebook, tablet, or some other type of system? Where is it located? How long have you had it? Did you research the computer before you made your purchase? What made you purchase it?

What do you use the computer for the most? What are five features you use most frequently? Why? What are three you use the least? Why? How could this device be improved to make your life more convenient? Describe one way life would be easier and one way your life would be more difficult without this device. Save your answers and submit your work as directed by your instructor.

Do It Yourself 2

Use an online mind mapper or presentation tool such as Mindomo, MindMeister, or Prezi, to create a mind map to compare desktop, notebook, and mobile devices. A mind map is a visual outline. More information about using mind maps can be found in Appendix B. From your student data files, open the file **vt_ch01_DIY2_answersheet** and save the file as **lastname_firstname_ch01_DIY2_answersheet**.

Your map should have three main branches: desktop, notebook, and mobile devices. Each branch should have at least three leaves, characteristics, advantages, and disadvantages.

When you are finished with your map, take a screenshot of this window and paste it into your answer sheet, or, if available, export your mind map as a PNG or JPG file.

Critical Thinking

Convergence has led to smaller devices that cost less and do more. From your student data files, open the file **vt_ch01_CT_answersheet** and save the file as **lastname_firstname_ch01_CT_answersheet**.

Research three of the newest smartphones or tablets on the market—one from each mobile platform: iOS, Android, and Windows. Complete the following table, comparing the features of each device. Use this research to decide which device would best meet your personal needs. Which device should you buy and why? What other accessories will you need to purchase? Do you need to purchase a service plan to take advantage of all the device's features? Save your file and submit both your table and essay as directed by your instructor.

	Device 1: iOS	Device 2: Android	Device 3: Windows
Website or store			
Brand			
Model			
Price			
Phone			
Calendar			
Camera/Video			
GPS			
Games			
Video player			
MP3 player			
Internet			
Downloadable apps			
Additional features			
Additional purchases required			

Step Instructions

1. Start Word. From your student data files, open the file named **vt_ch01_word**. Save the document as **lastname_firstname_ch01_word**.
2. On the last line of the document, type **Anna Sanchez, Intern** to complete the letter.
3. Select the first four lines of the document containing the name and street address, and then apply the No Spacing style.
4. Format the entire document as Times New Roman, 12 pt.
5. In the first body paragraph, format **Jones Consulting** as italic.
6. Place the insertion point before **Anna** on the last line of the document.

Ethical Dilemma

The term *digital divide* refers to the gap in technology access and literacy. There have been many types of programs designed to close this gap. One current trend is to put a tablet in the hands of every student. From your student data files, open the file **vt_ch01_ethics_answersheet** and save the file as **lastname_firstname_ch01_ethics_answersheet**.

Use the Internet to find a school program that supplies all students with tablets or notebooks. What are the goals of the program? How was it funded? Has it been successful? How has its success or failure been measured? Do you think programs like this one can really solve the digital divide? Why or why not? Type up your answers; be sure to cite your sources. Save the file and submit your work as directed by your instructor.

On the Web

There are many important people and events that led to our modern computers. In this exercise, you will create a timeline that illustrates the ones you feel are most significant. From your student data files, open the file **vt_ch01_web_answersheet** and save the file as **lastname_firstname_ch01_web_answersheet**.

Visit computerhope.com/history and under *Timeline* click the link to open the time period that includes the year you were born. Create a timeline showing five to seven important milestones in the development of computers that occurred in this decade. Use a free online timeline generator, such as

Display or Timegilder, or an online presentation tool, such as Prezi or PowerPoint, to create your timeline. Share the URL and present your findings to the class. Prepare a summary of your timeline and include the URL, where it can be viewed. Save the file, and submit your work as directed by your instructor.

Collaboration

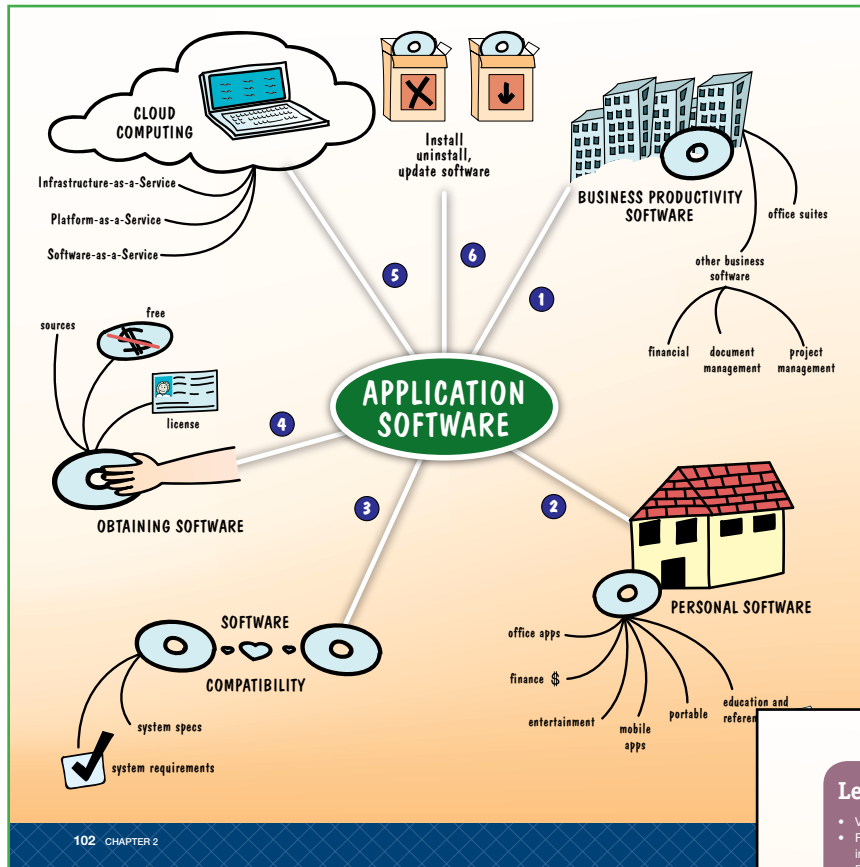

With a group of three to five students, research a famous computer pioneer. Write and perform a news interview of this person. If possible, video record the interview. Present your newscast to the class.

Instructors: Divide the class into groups of three to four students, and assign each group a famous computer pioneer from the list computerhope.com/people.

The Project: As a team, prepare a dialog depicting a news reporter interviewing this person. Use at least three references. Use Google Drive or Microsoft Office to prepare the presentation and provide documentation that all team members have contributed to the project.

Outcome: Perform the interview in a newscast format using the dialog you have written. The interview should be 3 to 5 minutes long. If possible, record the interview, and share the newscast with the rest of the class. Save this video as **teamname_ch01_video**. Turn in a final text version of your presentation named **teamname_ch01_interview**. Be sure to include the name of your presentation and a list of all team members. Submit your presentation to your instructor as directed.

End of Chapter 47

Mind maps are visual outlines of the chapter content, organized by objectives. They help students organize and remember the information they learned

Summary

1. Identify Types and Uses of Business Productivity Software

The most common business software is an office application suite—which may include a word processor, spreadsheet, presentation program, database, and personal information manager. Other business applications include financial software, document management, and project management software.

2. Identify Types and Uses of Personal Software

Personal software includes office applications, especially word processors, spreadsheets, and presentation programs. Other personal applications include entertainment and multimedia software such as media managers, video and photo editing software, and video games. Financial and tax preparation software as well as educational and reference software are also popular. You can run portable apps from a flash drive and take them with you.

3. Assess a Computer System for Software Compatibility

Before purchasing and installing software, you should research the system requirements needed to run the program and compare them to your system specifications using File Explorer and the System Control Panel or System Settings window. On a Mac, use the About This Mac window.

4. Compare Various Ways of Obtaining Software

You can obtain software from brick-and-mortar and online stores, publisher websites, and download websites. Download mobile apps only from trusted markets. It's important to read the EULA to understand the software license restrictions.

5. Discuss the Importance of Cloud Computing

Cloud computing moves hardware and software into the cloud, or Internet. Cloud computing allows you to access applications and data from any web-connected computer. Some benefits include lower cost, easier maintenance, security, and collaboration.

6. Install, Uninstall, and Update Software

Managing the programs on your computer includes installing, uninstalling, and updating the software. You can install programs through an app store, by using media, or by downloading from a website. Updating software fixes bugs, adds features, or improves compatibility. You should uninstall software using the program's uninstaller.

About the Author

Pearson Education, Inc.

Debra is a professor of computer and information science at Bucks County Community College, teaching computer classes ranging from basic computer literacy to cybercrime, computer forensics, and networking. She has certifications from Microsoft, CompTIA, Apple, and others. Deb has taught at the college level since 1996 and also spent 11 years in the high school classroom. She holds a B.S. in Secondary Science Education from Temple University and an M.A. in Computer Science Education from Arcadia University.

Throughout her teaching career Deb has worked with educators to integrate technology across the curriculum. At BCCC she serves on many technology committees, presents technology workshops for BCCC faculty, and serves as the computer science coordinator. Deb is an avid user of technology, which has earned her the nickname “gadget lady.”

Dedication

This project would not have been possible without the help and support of many people. I cannot express how grateful I am to all of you. Thank you.

My team at Pearson—Jenifer, Cheryl, Anne, Laura, and everyone else: you have been amazing, helping to bring my vision to reality and teaching me so much along the way.

My colleagues and students at Bucks County Community College: for your suggestions and encouragement throughout this process. You inspire me every day.

And most importantly—my family. My husband and sons for your patience, help, and love—even when it meant taking a photo “right this minute,” or reading a chapter when you wanted to be doing something else, or missing me while I was away. And the rest of my family and friends who agreed to let me use their photos throughout the book. I couldn’t have done this without your love and support.

And finally my dad—who taught me to love technology and not be afraid to try new things. I miss you and love you, daddy.

1

What Is a Computer?

FikMik/Fotoia

In This Chapter

If you've gone grocery shopping, put gas in your car, watched a weather report on TV, or used a microwave oven today, then you've interacted with a computer. Most of us use computers every day, often without even realizing it. Computers have become so commonplace that we don't even consider them computers. In this chapter, we discuss what a computer is and look at the development of computers in the past few centuries. After reading this chapter, you will recognize the different types of computing devices and their impact on everyday life.

Objectives

- 1 Explain the Functions of a Computer**
- 2 Describe the Evolution of Computer Hardware**
- 3 Describe How Computers Represent Data Using Binary Code**
- 4 List the Various Types and Characteristics of Personal Computers**
- 5 Give Examples of Other Personal Computing Devices**
- 6 List the Various Types and Characteristics of Multiuser Computers**
- 7 Explain Ubiquitous Computing and Convergence**

Running Project

In this project, you'll explore computers used in everyday life. Look for instructions as you complete each article. For most articles, there is a series of questions for you to research. At the conclusion of the chapter, you'll submit your responses to the questions raised.

What Does a Computer Do?

Objective

1

Explain the Functions of a Computer

A **computer** is a programmable machine that converts raw **data** into useful **information**. Raw data includes numbers, words, pictures, or sounds that represent facts about people, events, things, or ideas. A toaster can never be anything more than a toaster—it has one function—but a computer can be a calculator, a media center, a communications center, a classroom, and much more. The ability to change its programming distinguishes a computer from any other machine.

Necessity Is the Mother of Invention

The original computers were people, not machines, and the mathematical tables they computed tended to be full of errors. The technical and scientific advancements of the Industrial Revolution at the end of the 19th century led to a growing need for this type of hand-calculated information and to the development of the first mechanical computers. Computers automated the tedious work of computing such things as tide charts and navigation tables.

In the early 19th century, mathematician Charles Babbage designed a machine called an **Analytical Engine**. This mechanical computer could be programmed using **punch cards**—stiff pieces of paper that convey information by the presence or absence of holes. Punch cards were developed by Joseph Marie Jacquard as part of the Jacquard loom to manufacture textiles with complex patterns (Figure 1.1). The Analytical Engine would have been the first mechanical computer, but the technology didn't exist at the time to build it. In his 1864 book *Passages from the Life of a Philosopher*, Babbage wrote, “The whole of the development and operations of analysis are now capable of being executed by machinery. As soon as an Analytical Engine exists, it will necessarily guide the future course of science.” In 2011, a group of researchers at London's Science Museum began a project to build Babbage's computer. The project will take at least 10 years and cost millions of dollars.

Mathematician Ada Lovelace, a contemporary of Babbage, wrote a program for the Analytical Engine to calculate a series of Bernoulli numbers—a sequence of rational numbers used in number theory. Because of her efforts, many consider her the first computer programmer. Lovelace never tested the program because there were no machines capable of running it; however, when run on a computer today, her program yields the correct mathematical results. In 1979, the Ada computer language was named in her honor.

In 1936, mathematician Alan Turing wrote a paper titled *On Computable Numbers*, in which he introduced the concept of machines that could

Agsandrew/Fotolia

perform mathematical computations—later called **Turing machines**. In 1950, he developed the **Turing test**, which tests a machine's ability to display intelligent behavior. It took 64 years for the first computers to pass the Turing test, but it happened in 2014. Many consider Alan Turing to be the father of computer science and **artificial intelligence**—the branch of science concerned with making computers behave like humans. Alan Turing was the subject of the 2014 movie *The Imitation Game*.

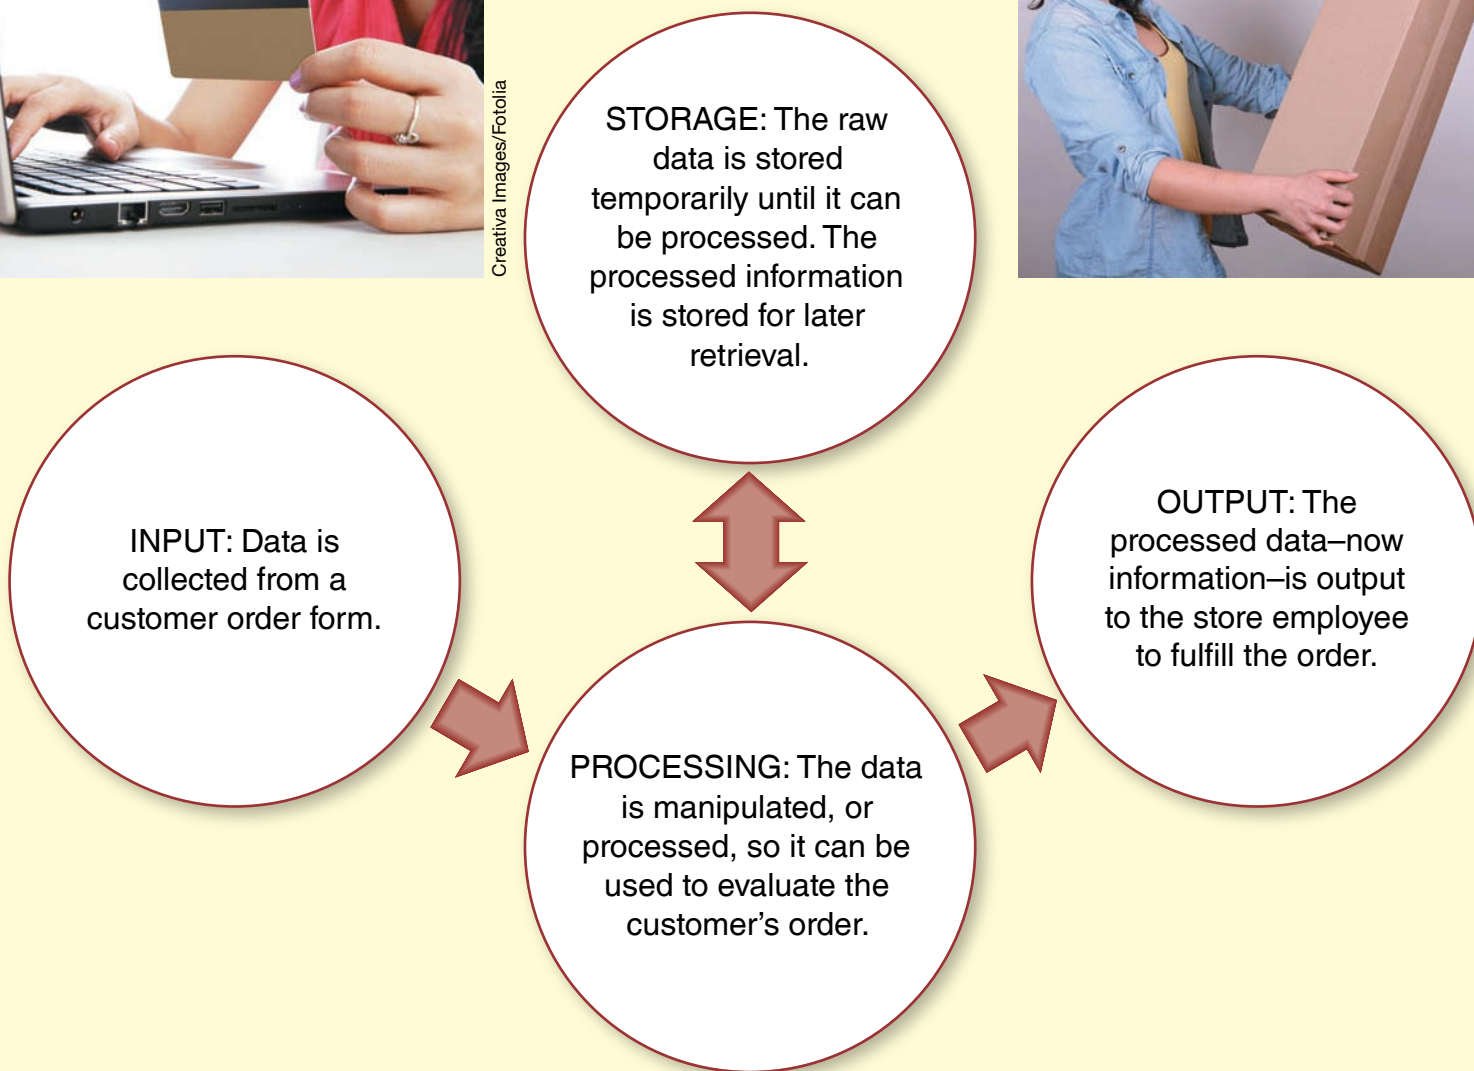

FIGURE 1.2 The information processing cycle converts data collected from a customer order form into information used to fulfill the order.

THE INFORMATION PROCESSING CYCLE

Computers convert data into information by using the **information processing cycle (IPC)**. The four steps of the IPC are input, processing, storage, and output. Raw data entered into the system during the input stage is processed, or manipulated, to create useful information. The information is stored for later retrieval and then returned to the user in the output stage. Figure 1.2 shows a general analogy of how this works. In this example, a customer is ordering an item online. The data collected from the customer is the input. The input is temporarily stored in the system until it can be processed. During processing, the data is used to evaluate the customer order. The output is sent to the employee to pick, pack, and ship the order.

It was nearly a century after Babbage designed his Analytical Engine before the first working mechanical computers were built. From that point, it took only about 40 years to go from those first-generation machines to the current fourth-generation systems.

Running Project

Many developments of the Industrial Revolution, such as the Jacquard loom, helped pave the way for modern computers. Use the Internet to find out how the following people also contributed: George Boole, Vannevar Bush, Nikola Tesla, and Gottfried Wilhelm Leibniz.

4 Things You Need to Know

- Computers are programmable machines.
- The four steps of the information processing cycle are input, processing, storage, and output.
- The IPC converts raw data into useful information.
- Artificial intelligence is the science of making computers behave like humans.

Key Terms

Analytical Engine
artificial intelligence
computer
data
information
information processing cycle (IPC)
punch card
Turing machine
Turing test

How To?

Digital Literacy Skill

Capture a Screenshot of Your Desktop

A useful skill is creating screen shots of your desktop. For example, it's helpful for providing directions on how to do something or for keeping a record of an error message that appears on your screen. Windows includes a program called the Snipping

Tool that you can use to capture a screenshot. Macs include the Grab tool.

The Windows Snipping Tool can capture four types of snips: Free-form, Rectangular, Window, or Full-screen. The Mac Grab tool can capture three types of grabs: Selection, Window, or Screen.

You can save your screenshots, email them, paste them into

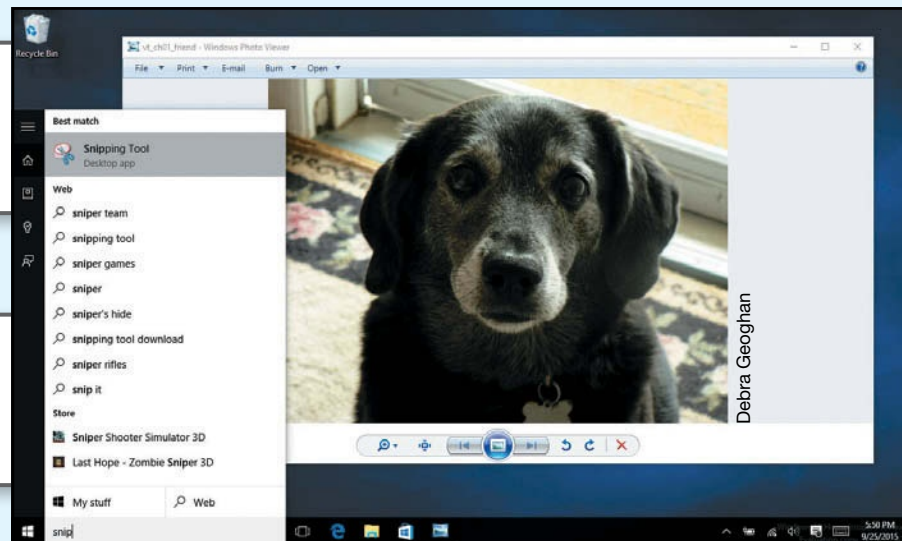

documents, and annotate and highlight them. If necessary, download the student data files from pearsonhighered.com/viztech. From your student data files, open the `vt_ch01_howto1_answersheet` file and save the file as `lastname_firstname_ch01_howto1_answersheet`.

1

From your student data files, right-click the file `vt_ch01_friend`, point to *Open with*, and then click *Photos*.

2

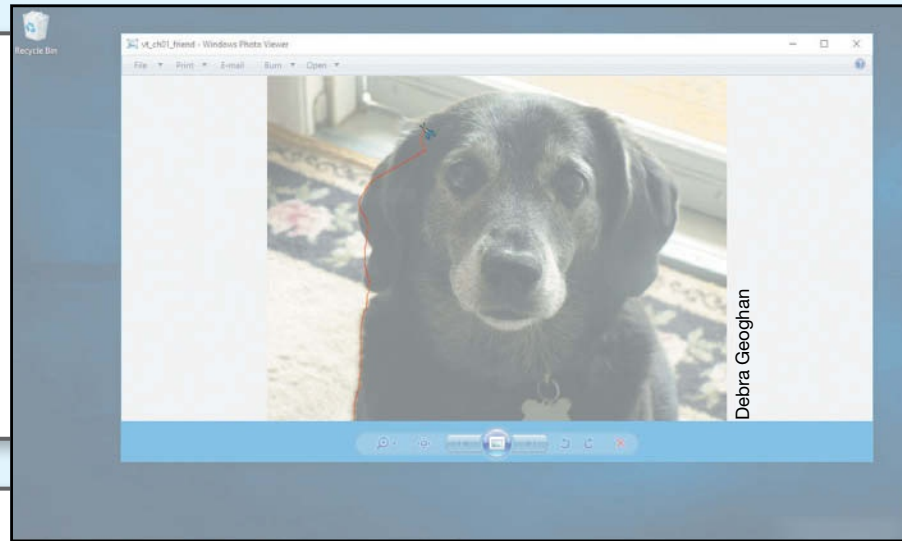

In the Windows search box on the taskbar, type **snip** and then, in the Search results, click *Snipping Tool*.

Windows 10, Microsoft Corporation

3

In the Snipping Tool window, click the drop-down arrow next to *New* and click *Free-form Snip*. Drag the mouse to draw a line around the dog's head with the Snipping Tool scissors. Click the *Copy* icon on the toolbar. Switch to your answer sheet and paste the snip under **Free-form Snip**. You can resize the image to fit your answer sheet.

4

Return to your image. In the Snipping Tool window, click *New*. Click the drop-down arrow next to *New* and click *Rectangular Snip*. Drag the box around the dog's head and release the mouse button. Click the *Copy* icon on the toolbar. Paste the rectangular snip into your document under **Rectangular Snip**.

5

Use the same procedure to capture a Window Snip and a Full-screen Snip of the dog and paste both in your document. In a paragraph, describe the difference between the snips you took. Save the file and submit it as directed by your instructor.

MAC

If you are using a Mac:

1. From your student data files, double-click the file *vt_ch01_friend* to open it in Preview.
2. From Launchpad, click the *Other* folder, and then open Grab.
3. From the Grab *Capture* menu, click *Selection*. Drag the box around the dog's head and release the mouse button. Use the *Edit* menu to copy the capture and then paste it into your answer sheet. Use the same procedure to capture a Window and Screen grab and paste both in your document. In a paragraph, describe the difference between the grabs you took. Save the file and submit it as directed by your instructor.
