

Exam

Name _____

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

Solve the problem.

- 1) Which of the following is not the job of a statistician? 1) _____
- A) determining what information is relevant in a given problem
 - B) determining whether the conclusions drawn from a study are to be trusted
 - C) collecting numerical information in the form of data
 - D) implementing new procedures based on the results of a study

Answer: D

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

- 2) What is statistics? 2) _____
- Answer: Statistics is the science of data that involves collecting, classifying, summarizing, organizing, analyzing, and interpreting numerical information.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

- 3) A recent report stated "Based on a sample of 130 truck drivers, there is evidence to indicate that, on average, independent truck drivers earn more than company-hired truck drivers." Does this statement describe descriptive or inferential statistics? 3) _____
- A) Inferential statistics
 - B) Descriptive statistics

Answer: A

- 4) A survey of high school teenagers reported that 93% of those sampled are interested in pursuing a college education. Does this statement describe descriptive or inferential statistics? 4) _____
- A) Descriptive statistics
 - B) Inferential statistics

Answer: A

- 5) The average age of the students in a statistics class is 22 years. Does this statement describe descriptive or inferential statistics? 5) _____
- A) Descriptive statistics
 - B) Inferential statistics

Answer: A

- 6) From past figures, it is predicted that 47% of the registered voters will vote in the March primary. Does this statement describe descriptive or inferential statistics? 6) _____
- A) Inferential statistics
 - B) Descriptive statistics

Answer: A

Solve the problem.

- 13) Parking at a university has become a problem. University administrators are interested in determining the average time it takes a student to find a parking spot. An administrator inconspicuously followed 90 students and recorded how long it took each of them to find a parking spot. Identify the population of interest to the university administration. 13) _____
- A) the students who park at the university between 9 and 10 AM on Wednesdays
 - B) the entire set of faculty, staff, and students who park at the university
 - C) the entire set of students who park at the university
 - D) the 90 students about whom the data were collected

Answer: C

- 14) Parking at a university has become a problem. University administrators are interested in determining the average time it takes a student to find a parking spot. An administrator inconspicuously followed 220 students and recorded how long it took each of them to find a parking spot. Identify the variable of interest to the university administration. 14) _____
- A) number of empty parking spots
 - B) time to find a parking spot
 - C) students who drive cars on campus
 - D) number of students who cannot find a spot

Answer: B

- 15) An assembly line is operating satisfactorily if fewer than 2% of the phones produced per day are defective. To check the quality of a day's production, the company randomly samples 40 phones from a day's production to test for defects. Define the population of interest to the manufacturer. 15) _____
- A) the 40 phones sampled and tested
 - B) all the phones produced during the day in question
 - C) the 40 responses: defective or not defective
 - D) the 2% of the phones that are defective

Answer: B

- 16) An insurance company conducted a study to determine the percentage of cardiologists who had been sued for malpractice in the previous three years. The sample was randomly chosen from a national directory of doctors. What is the variable of interest in this study? 16) _____
- A) the number of doctors who are cardiologists
 - B) the doctor's area of expertise (i.e., cardiology, pediatrics, etc.)
 - C) all cardiologists in the directory
 - D) the responses: have been sued/have not been sued for malpractice in the last three years

Answer: D

- 17) A study attempted to estimate the proportion of Florida residents who were willing to spend more tax dollars on protecting the Florida coastline from environmental disasters. Twenty-six hundred Florida residents were surveyed. Which of the following is the population used in the study? 17) _____
- A) Florida residents willing to spend more tax dollars protecting the coastline from environmental disasters
 - B) the 2600 Florida residents who were surveyed
 - C) all Florida residents
 - D) all Florida residents who lived along the coastline

Answer: C

- 18) A study attempted to estimate the proportion of Florida residents who were willing to spend more tax dollars on protecting the Florida beaches from environmental disasters. Twenty-six hundred Florida residents were surveyed. Which of the following describes the variable of interest in the study? 18) _____
- A) the response to the question "Do you use the beach?"
 - B) the response to the question "Do you live along the beach?"
 - C) the 2600 Florida residents surveyed
 - D) the response to the question, "Are you willing to spend more tax dollars on protecting the Florida beaches from environmental disasters?"

Answer: D

- 19) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the population of interest to the university administration. 19) _____
- A) a single student that parks at the university
 - B) the 250 students that data was collected from
 - C) the entire set of students that park at the university
 - D) the parking time, defined to be the amount of time the student spent finding a parking spot

Answer: C

- 20) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the sample of interest to the university administration. 20) _____
- A) the parking time, defined to be the amount of time the student spent finding a parking spot
 - B) the entire set of students that park at the university
 - C) a single student that parks at the university
 - D) the 250 students that data was collected from

Answer: D

- 21) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the experimental unit of interest to the university administration. 21) _____
- A) the 250 students that data was collected from
 - B) the parking time, defined to be the amount of time the student spent finding a parking spot
 - C) a single student that parks at the university
 - D) the entire set of students that park at the university

Answer: C

22) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the variable of interest to the university administration. 22) _____

- A) the parking time, defined to be the amount of time the student spent finding a parking spot
- B) a single student that parks at the university
- C) the entire set of students that park at the university
- D) the 250 students that data was collected from

Answer: A

23) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the population of interest for this study. 23) _____

- A) a single stock traded on the NYSE
- B) the entire set of stocks that are traded on the NYSE
- C) the current price (or closing price) of a NYSE stock
- D) the 500 NYSE stocks that current prices were collected from

Answer: B

24) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the sample of interest for this study. 24) _____

- A) the current price (or closing price) of a NYSE stock
- B) the entire set of stocks that are traded on the NYSE
- C) the 500 NYSE stocks that current prices were collected from
- D) a single stock traded on the NYSE

Answer: C

25) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the experimental unit of interest for this study. 25) _____

- A) the current price (or closing price) of a NYSE stock
- B) a single stock traded on the NYSE
- C) the entire set of stocks that are traded on the NYSE
- D) the 500 NYSE stocks that current prices were collected from

Answer: B

26) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the variable of interest for this study. 26) _____

- A) the entire set of stocks that are traded on the NYSE
- B) the current price (or closing price) of a NYSE stock
- C) a single stock traded on the NYSE
- D) the 500 NYSE stocks that current prices were collected from

Answer: B

27) A study in the state of Georgia was conducted to determine the percentage of all community college students who have taken at least one online class. 1500 community college students were contacted and asked if they had taken at least one online class during their time at their community college. These responses were then used to estimate the percentage of all community college students who have taken at least one online class. Identify the population of interest in this study. 27) _____

- A) the number of online classes a student has taken
- B) all community college students in the state of Georgia
- C) the 1500 community college students contacted
- D) the response (Yes/No) to the question, "Have you taken at least one online class?"

Answer: B

28) A study in the state of Georgia was conducted to determine the percentage of all community college students who have taken at least one online class. 1500 community college students were contacted and asked if they had taken at least one online class during their time at their community college. These responses were then used to estimate the percentage of all community college students who have taken at least one online class. Identify the variable of interest in this study. 28) _____

- A) the 1500 community college students contacted
- B) all community college students in the state of Georgia
- C) the response (Yes/No) to the question, "Have you taken at least one online class?"
- D) the number of online classes a student has taken

Answer: C

29) Which of the following is not typically an element of inferential statistical problems? 29) _____

- A) sample
- B) measure of reliability
- C) variable of interest
- D) census

Answer: D

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

- 30) Parking at a university has become a problem. University administrators are interested in determining the average time it takes a student to find a parking spot. An administrator inconspicuously followed 110 students and recorded how long it took each of them to find a parking spot. Identify the population, sample, and variable of interest to the administrators. 30) _____

Answer: The population of interest are all students at the university who park. The sample is the parking times of the 110 students that were collected by the university administrator. The variable of interest to the administrators is the parking time variable.

- 31) A quality inspector tested 33 copiers in an attempt to estimate the average failure rate of the copier model. His study indicated that the number of failures decreased from two years ago, indicating an increase in the reliability of the copiers. Describe the variable of interest to the inspector. 31) _____

Answer: The variable of interest to the researcher is the failure rate of the copiers.

- 32) A high school guidance counselor analyzed data from a sample of 300 community colleges throughout the United States. One of his goals was to estimate the annual tuition costs of community colleges in the United States. Describe the population and variable of interest to the guidance counselor. 32) _____

Answer: The population of interest to the guidance counselor is all community colleges in the United States. The variable of interest is the annual tuition cost of the community college.

- 33) Explain why it is not necessary to provide a measure of reliability when a census is used rather than a sample. 33) _____

Answer: When a census is used, there should be no error.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

Answer the question True or False.

- 34) A variable is a characteristic or property of a population. 34) _____
A) True B) False

Answer: B

- 35) Measurement is the process of assigning numbers to variables of individual population units. 35) _____
A) True B) False

Answer: A

- 36) A census is feasible when the population of interest is small. 36) _____
A) True B) False

Answer: A

- 37) The process of using information from a sample to make generalizations about the larger population is called statistical inference. 37) _____
A) True B) False

Answer: A

- 38) A measure of reliability is an important element of a descriptive statistical problem. 38) _____
A) True B) False
Answer: B

Solve the problem.

- 39) When we study a process, what is generally the focus? 39) _____
A) the subprocesses B) the output
C) the black box D) the input
Answer: B

- 40) In the context of processes, what is a sample? 40) _____
A) any set of output B) any set of input
C) any set of subprocesses D) any subset of the population
Answer: A

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

- 41) What do we call a process whose operations are unknown or unspecified? 41) _____
Answer: a black box

- 42) A chain of coffee shops has 45 stores in one metropolitan area. For liability reasons, the chain is interested in the average temperature of hot drinks served at the stores. Three stores were chosen and the temperature of every fifth hot drink served at each of these stores was recorded during a two-week period. At the end of the two-week period, the temperatures of 10,571 hot drinks had been recorded. 42) _____
- Identify the process of interest.
 - Identify the variable of interest.
 - Describe the sample.
 - Describe the inference of interest.

- Answer: a. serving of hot drinks at coffee shops in the chain
b. temperature of hot drinks served
c. 10,571 drinks whose temperatures recorded over the two-week period
d. average temperature of all hot drinks served at all stores in the chain

43) A department store receives customer orders through its call center and website. These orders as well as any special orders received in the stores are forwarded to a distribution center where workers pull the items on the orders from inventory, pack the items, and prepare the necessary paperwork for the shipping company that will pick the orders up and deliver them to the customers. In order to monitor the subprocess of pulling the items from inventory, every 15 minutes one order is checked to determine whether the worker has pulled the correct item. 43) _____

- a. Identify the process of interest.
- b. Identify the variable of interest.
- c. Describe the sample.
- d. Describe the inference of interest.

Answer: a. fulfilling customers' orders from receiving the order to pick up by shipping company
b. whether or not an order has been pulled correctly
c. the set of all orders that are checked (one every 15 minutes)
d. number or proportion of all orders that are pulled correctly (incorrectly)

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

44) The amount of television viewed by today's youth is of primary concern to Parents Against Watching Television (PAWT). 250 parents of elementary school-aged children were asked to estimate the number of hours per week that their child watches television. Identify the type of data collected by PAWT. 44) _____

- A) qualitative
- B) quantitative

Answer: B

45) The manager of a car dealership records the colors of automobiles on a used car lot. Identify the type of data collected. 45) _____

- A) qualitative
- B) quantitative

Answer: A

46) A postal worker counts the number of complaint letters received by the United States Postal Service in a given day. Identify the type of data collected. 46) _____

- A) qualitative
- B) quantitative

Answer: B

47) An usher records the number of unoccupied seats in a movie theater during each viewing of a film. Identify the type of data collected. 47) _____

- A) qualitative
- B) quantitative

Answer: B

48) A fan observes the numbers on the shirts of a girl's soccer team. Identify the type of data collected. 48) _____

- A) qualitative
- B) quantitative

Answer: A

- 55) A personnel director studied the eating habits of a company's employees. The director noted whether employees brought their own lunch to work, ate at the company cafeteria, or went out to eat lunch. This type of data collection would best be considered as a(n) _____.
A) designed experiment
B) observational study
Answer: B
- 56) A student worked on her statistics project in the library and found a reference book that contained the median family incomes for all 50 states. On her project, she would report her data as being collected _____.
A) from a designed experiment
B) from a published source
C) observationally
D) from a survey
Answer: B
- 57) What method of data collection would you use to collect data for a study where a drug was given to 60 patients and a placebo to another group of 60 patients to determine if the drug has an effect on a patient's illness?
A) observational study
B) survey
C) published source
D) designed experiment
Answer: D
- 58) What method of data collection would you use to collect data for a study where a political pollster wishes to determine if his candidate is leading in the polls?
A) published source
B) survey
C) observational study
D) designed experiment
Answer: B
- 59) Parking at a large university has become a very big problem. University administrators are interested in determining the average parking time (e.g. the time it takes a student to find a parking spot) of its students. An administrator inconspicuously followed 250 students and carefully recorded their parking times. Identify the data collection method used by the administration in this study.
A) data collected observationally
B) data from a designed experiment
C) data from a published source
Answer: A
- 60) As part of an economics class project, students were asked to randomly select 500 New York Stock Exchange (NYSE) stocks from the Wall Street Journal. As part of the project, students were asked to summarize the current prices (also referred to as the closing price of the stock for a particular trading date) of the collected stocks using graphical and numerical techniques. Identify the data collection method used in this study.
A) data collected observationally
B) data from a designed experiment
C) data from a published source
Answer: C

- 61) Does online teaching help or hinder student learning? To help answer this question, a statistics teacher decided to teach his three sections of a particular class using three different teaching models - a traditional face-to-face section, a completely online section, and a hybrid or blended section that incorporated both a face-to-face and online component in the section. Students were randomly assigned to the different sections, taught identical information using the different teaching formats, and given identical examinations to measure student learning. The goal was to identify if the teaching method used affected student learning performance. Identify the data collection method used in this study. 61) _____
- A) data from a designed experiment
 - B) data from a published source
 - C) data collected observationally
- Answer: A

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

- 62) What is meant by a representative sample? 62) _____
- Answer: a sample that exhibits characteristics typical of those possessed by the population of interest
- 63) What is the most common way to satisfy the representative sample requirement? 63) _____
- Answer: selecting a random sample
- 64) Three female students and two male students are to be chosen from a group of 30 female students and 20 male students. Does this sample of five students satisfy the conditions to be a random sample of the 50 students in the group? Explain. 64) _____
- Answer: No; not every sample of 5 students from the group has an equal chance of selection; for example, a sample consisting of 5 males has no chance of being selected.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

Answer the question True or False.

- 65) In an observational study, the researcher exerts strict control over the units in the study. 65) _____
- A) True
 - B) False
- Answer: B
- 66) When using data from a published source, it is not important to know how the data were collected and whether randomization was used. 66) _____
- A) True
 - B) False
- Answer: B

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

Solve the problem.

- 67) In one study of the moral of company's employees, 10 employees were randomly chosen from each of the departments within the company. Identify the sampling design used. 67) _____
- Answer: stratified random sampling

- 68) In an attempt to determine the ages of its customers, one store asked every tenth customer who entered the store his or her age. Identify the sampling design used. 68) _____
Answer: systematic sampling
- 69) What term is used to describe the situation where sampling units contained in a sample do not produce sample observations? 69) _____
Answer: nonresponse
- 70) What is meant by selection bias? 70) _____
Answer: Selection bias is when a subset of the experimental units in the population is excluded so that these units have no possibility of being selected in the sample.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

- 71) Which type of problem has occurred when inaccuracies exist in the values of the data recorded? 71) _____
A) nonresponse bias B) selection bias C) measurement error
Answer: C
- 72) A watchdog group is investigating how people are treated during the foreclosure process. Surveys were mailed to a random sample of 300 people who had recently been threatened with foreclosure. 75 of the surveys were returned by the postal service because the intended recipients had moved and left no forwarding address. What type of problem has occurred? 72) _____
A) nonresponse bias B) measurement error C) selection bias
Answer: A
- 73) A university was interested in student reaction to a proposal to spend more on athletic scholarships and less on academic scholarships. 35 student athletes were surveyed. What type of problem has occurred? 73) _____
A) measurement error B) selection bias C) nonresponse bias
Answer: B
- 74) The way in which an interviewer asks a question about political party affiliation causes respondents to answer that they have no affiliation when they actually do. What type of problem has occurred? 74) _____
A) nonresponse bias B) measurement error C) selection bias
Answer: B
- 75) A student completing a research project for a criminal justice class obtained a radar gun for determining automobile speeds and recorded the speeds of automobiles passing a fixed location over a period of several hours. The student was unaware that the device needed to be recharged after two hours of use and that the speeds recorded after two hours were not reliable. What type of problem has occurred? 75) _____
A) nonresponse bias B) measurement error C) selection bias
Answer: B

76) Because of the possible legal consequences, many people in a sample of the U.S. population chose not to participate in a survey regarding illegal drug use. What type of problem has occurred? 76) _____
A) nonresponse bias B) measurement error C) selection bias
Answer: A

77) A middle school was interested in surveying their students to find out opinions about the school's media center. To facilitate data collection, the homeroom period was extended 30 minutes to allow everyone in the school ample time to respond to a short questionnaire. Unfortunately, it was learned after the surveys had been completed that all honors students in the middle school were on an all-day field trip and away from school for the entire day. The exclusion of their input into the survey would be considered which type of sampling problem? 77) _____
A) selection bias B) measurement error C) nonresponse bias
Answer: A

78) A county planning commission is attempted to survey 1500 households from the county's 400,000 households. A random sample was selected and surveys were mailed to the randomly selected households, but only 1075 were returned. The inability to collect data from the 425 households that didn't return the survey would be considered which type of sampling problem? 78) _____
A) selection bias B) measurement error C) nonresponse bias
Answer: C

SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

79) Define business analytics. 79) _____
Answer: Business analytics refers to methodologies (e.g., statistical methods) that extract useful information from data in order to make better business decisions.

80) Define statistical thinking. 80) _____
Answer: Statistical thinking involves applying rational thought and the science of statistics to critically assess data and make inferences.

81) Give an example of unethical statistical practice. 81) _____
Answer: Researchers select a biased sample, with the intention of misleading the public.

82) A health food company has the following statement on their new product packaging: "Prevents all types of cancer!" (Fact: Past studies have shown that some ingredients in the new product have been known to possibly reduce the risk of many types of cancer). Discuss why it is unethical to make this statement. 82) _____
Answer: Answers may vary. One possible answer is that the past studies show that the ingredients only have possible cancer reducing effects on many, not all, types of cancer.

MULTIPLE CHOICE. Choose the one alternative that best completes the statement or answers the question.

- 83) A researcher studying malnutrition among children in a developing country collected weights of a random sample of children using a scale that she had set to give weights 2.5 kilograms less than the actual weight. Which statement best describes this situation? 83) _____
- A) Measurement error has occurred, and the researcher is guilty of unethical statistical practice.
 - B) Measurement error has not occurred, and the researcher is not guilty of unethical statistical practice.
 - C) Measurement error has occurred, but the researcher is not guilty of unethical statistical practice.
 - D) Measurement error has not occurred, but the researcher is guilty of unethical statistical practice.

Answer: A
